BOOKS & STATIONERY RETAIL MANAGEMENT SYSTEM

User Manual & Help Guide

For shop owners, managers, cashiers, store keepers and office staff

Step-by-step instructions with screenshots

Version 1.0 | October 2026

The screenshots in this guide use sample data (sample books, customers and users). Your own shop name and data will appear on your screens.

About this guide

This guide explains, in plain language, how to use the **Books & Stationery Retail Management System** in your shop. You do not need any computer or technical knowledge. Every task is explained step by step, with pictures of the real screens.

Who is this guide for?

If you are a...	Read these chapters
Shop owner / manager	All chapters. Start with Chapters 1 and 2, then Chapter 3 (Administration) and Chapter 7 (daily routines).
Cashier	Chapter 1 (getting started) and Chapter 4 (POS - selling). Then Chapter 7 (opening and closing checklists).
Store keeper / inventory clerk	Chapter 1 and Chapter 5 (Product & Inventory).
Accountant / office staff	Chapter 1, then Chapter 3 sections on suppliers, customers, finance and reports.

How to read the pictures

Most screenshots have **red numbered circles** and **red boxes**. The numbers show you where to look or click, in the order of the steps. The caption under each picture explains what each number means.

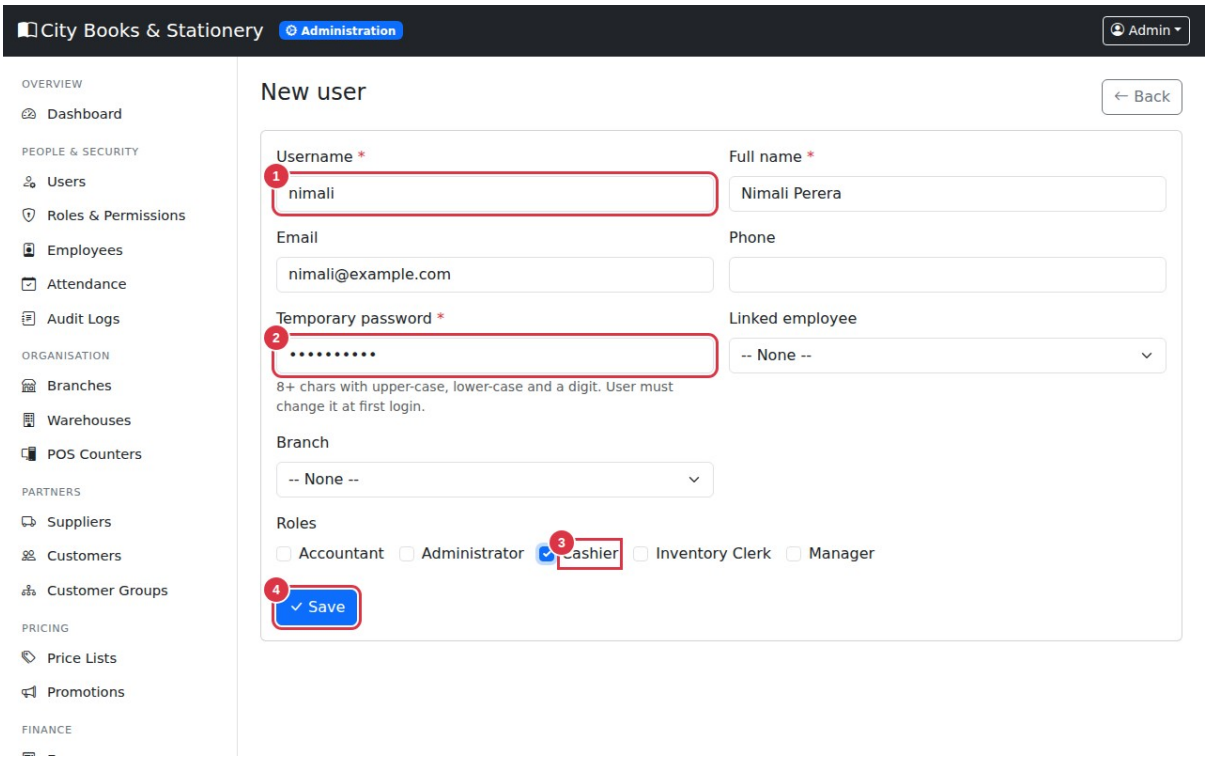

Figure 1. *Example: a screen with red numbered markers. 1 = Username box, 2 = Password box, 3 = Cashier role, 4 = Save button.*

Special boxes

NOTE: A blue note gives extra information that is good to know.

TIP: A green tip is a shortcut or a better way to do something.

IMPORTANT: An amber box warns you about something that can cause a mistake or cannot be undone. Please read these carefully.

Words used in this guide

Word	Meaning
Click	Press the left mouse button once (or tap the screen if you use a touch screen).
Sidebar	The menu on the left side of the screen.
Tile	The big square boxes you see after signing in. Each tile opens one part of the system.
Form	A page where you type details (for example a new customer) and press Save.
Drop-down list	A box with a small arrow. Click it to choose one item from a list.
Required field	A box marked with a red star (*). You must fill it in before you can save.

1. Getting started

1.1 Opening the system

The system works in a web browser (for example Google Chrome or Microsoft Edge) on your shop computer. Your administrator will give you the address (for example `http://bsrms.test/`). Type it in the address bar at the top of the browser and press **Enter**. You can save it as a bookmark so you can open it quickly.

> **TIP:** Use a modern browser such as Chrome or Edge. For the POS counter, a computer with a barcode scanner and a receipt printer gives the best results.

1.2 Signing in

1. Type your **Username** in the first box.
2. Type your **Password** in the second box. The letters appear as dots to keep your password private.
3. Click the blue **Sign in** button.

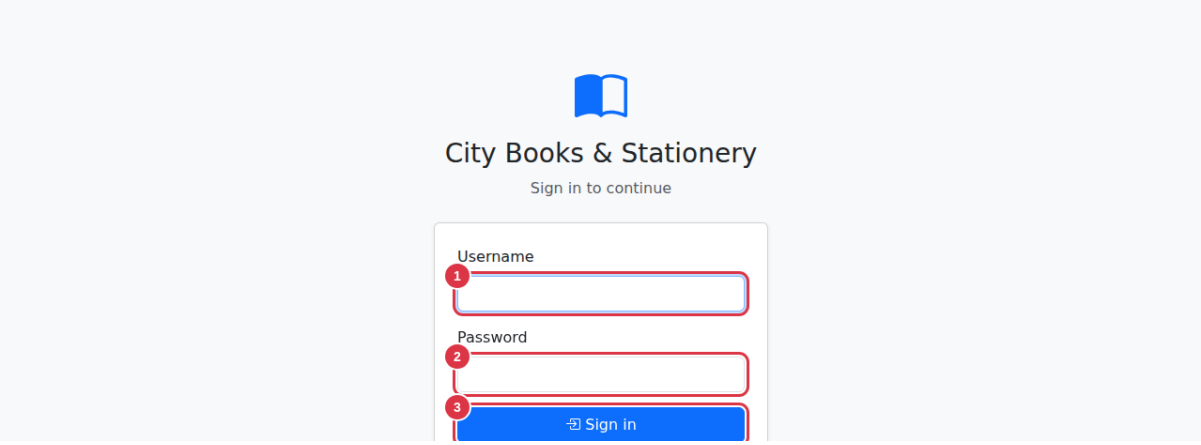

Figure 2. The sign-in page. 1 = Username, 2 = Password, 3 = Sign in button.

> **IMPORTANT:** Never share your password and never write it on a note stuck to the computer. Everything you do is recorded under your name.

> **NOTE:** If you type the wrong password 5 times in a row, your account is locked for 15 minutes to protect it. Wait, or ask your manager to unlock it. The system shows the same message for a wrong username or a wrong password, on purpose.

1.3 Changing your password the first time

When an administrator creates your account, they give you a **temporary password**. The first time you sign in, the system asks you to choose your own password.

1. Type the temporary password in **Current password**.

2. Type your new password in **New password**. It must have at least 8 characters, with a capital letter, a small letter and a number (for example `Nimali@2026`).
3. Type the same new password again in **Confirm new password**.
4. Click **Update password**.

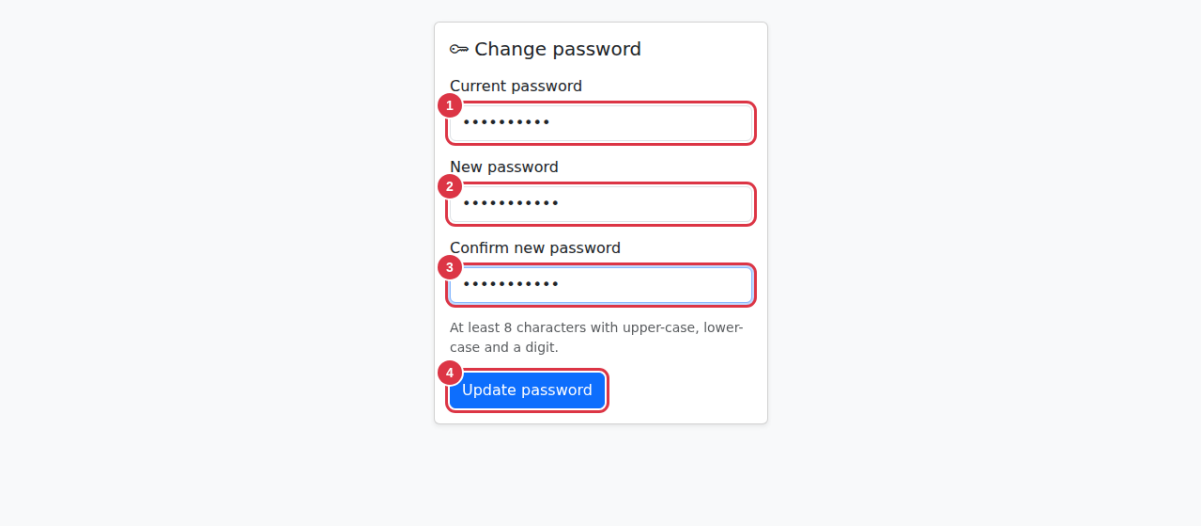

Figure 3. Choosing your own password. 1 = Current (temporary) password, 2 = New password, 3 = Confirm new password, 4 = Update password.

> **TIP:** You can change your password at any time: click your name at the top right, then **Change password**.

1.4 Choosing your system (the tiles)

After you sign in you see up to three big tiles. Each tile is a separate "system":

- **Administration** - users, employees, suppliers, customers, prices, money (finance), reports and settings.
- **Point of Sale (POS)** - the cashier counter: selling, payments, returns and receipts.
- **Product & Inventory** - books, stationery, stock, buying from suppliers, transfers and stock counting.

Click a tile to enter that system. The system opens with its own menu and dashboard.

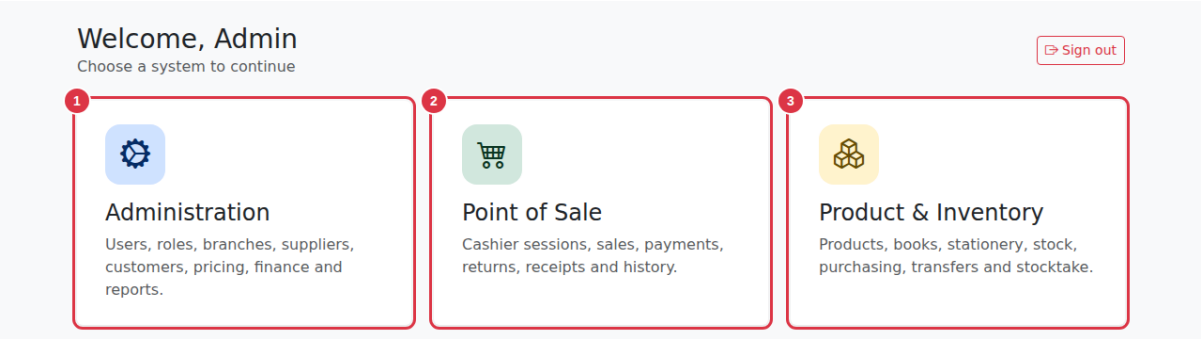

Figure 4. The tiles shown after sign-in. 1 = Administration, 2 = Point of Sale, 3 = Product & Inventory.

> **NOTE:** You only see the tiles you are allowed to use. For example, a cashier who has not been given any administration permission will not see the Administration tile. If you cannot see a tile you need, ask your manager - see Chapter 2.

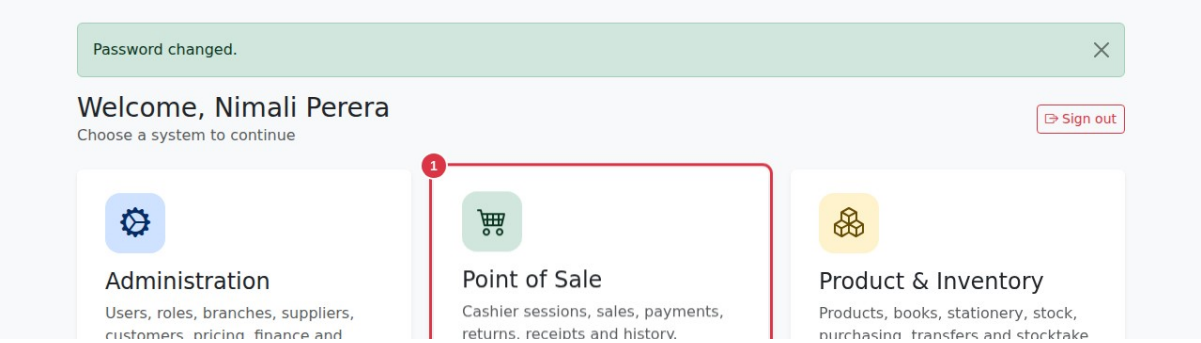

Figure 5. *A cashier's screen after sign-in (only the allowed tiles are shown). 1 = Point of Sale tile.*

1.5 Finding your way around the screen

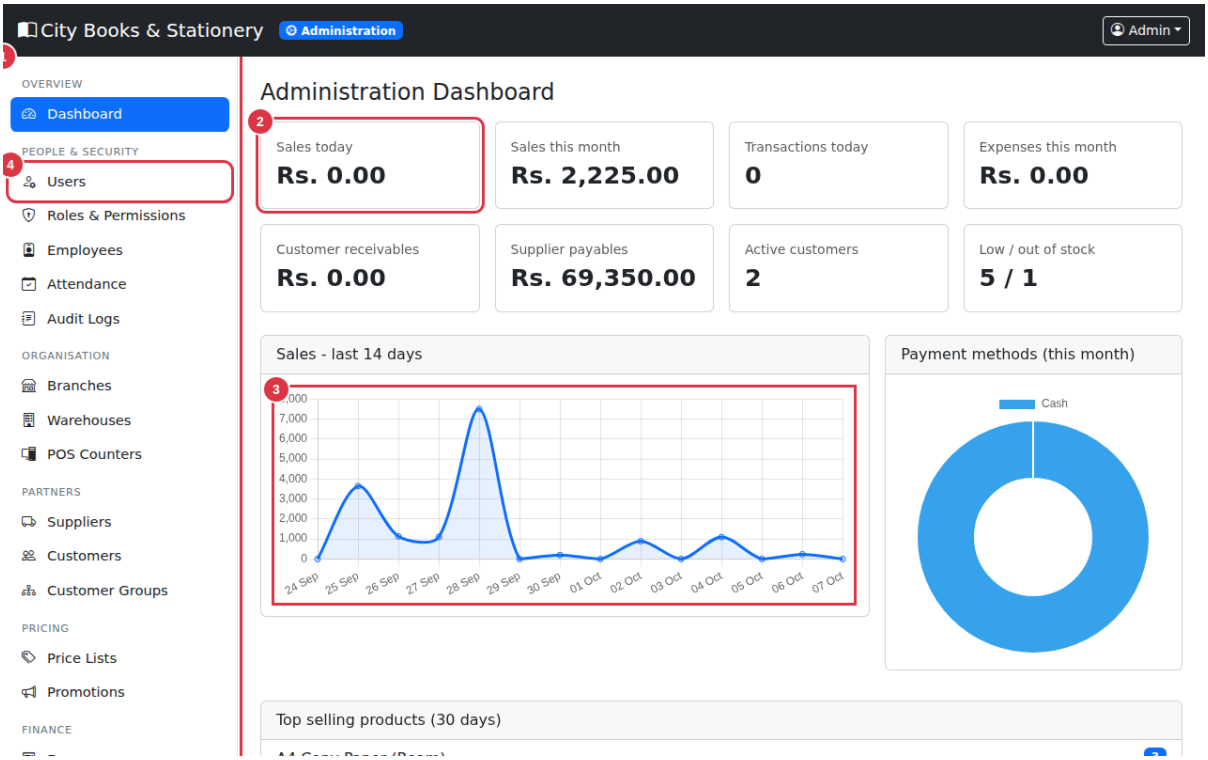

Figure 6. *The main parts of the screen. 1 = Sidebar menu (the menu changes with the system you chose), 2 = Summary boxes on the dashboard, 3 = Chart, 4 = A menu item.*

- **Top bar (dark)** - the shop name, the system you are in (coloured label), and your name on the right.
- **Your name menu** - click it to **Switch system** (go back to the tiles), **Change password** or **Sign out**.
- **Sidebar (left)** - click a name to open that page. The page you are on is highlighted in blue. You only see menu items you are allowed to use.
- **Main area** - the page itself: lists, forms and reports.

> **TIP:** On a small screen or tablet, the sidebar is hidden. Click the **three-line button** at the top left to open it.

1.6 Signing out and automatic sign-out

When you finish work, click your name at the top right and choose **Sign out**. If you leave the computer without touching it for 30 minutes, the system signs you out automatically. This protects your shop information.

> **IMPORTANT:** A cashier must close the register (Section 4.11) before signing out at the end of the day.

1.7 Things that work the same on every page

What you see	What it does
Search box and the magnifier button	Type part of a name, code or phone number and press Enter to filter the list. Click **Clear** to show everything again.
Filter drop-downs	Choose a category, warehouse, status or date range to narrow a list.
New (blue button)	Opens an empty form to add a new record.
Pencil icon	**Edit** the record.
Toggle icon (yellow)	**Activate / deactivate** the record. A deactivated record is kept but can no longer be used.
Rubbish-bin icon (red)	**Delete or archive** the record. If the record is already used in sales or purchases it cannot be deleted - deactivate it instead.
Eye icon	**View** the full profile or details.
Page numbers at the bottom	Move to the next pages of a long list.
Red star * beside a label	A required box. You cannot save until it is filled in.
Red message under a box	The value is not accepted (for example a missing name). Correct it and press Save again.
Green / red message at the top	Confirms that a task worked (green) or explains what went wrong (red).

> **IMPORTANT:** Press a **Save** button only once. After you click, the button is disabled for a moment to prevent saving twice. Wait for the green confirmation message.

2. Who can do what? (Roles and permissions)

Not every person should be able to do everything. For example, only a manager should approve a big discount, and only an administrator should create users. The system controls this with **roles**.

A **role** is a group of permissions, such as "Cashier". Each user has one or more roles. A **permission** is one small right, such as "Create sale" or "Approve purchase order". If you do not have a permission, the button or menu item is hidden, and the system refuses the action even if you type the address by hand.

2.1 The standard roles

Role	Typical person	What this role usually can do
Administrator	Owner / system manager	Everything, including users, roles and settings. Cannot be restricted.
Manager	Store manager	Daily operations and approvals: approve discounts, returns, stock adjustments, purchase orders, expenses; view reports. Cannot create users or change roles.
Cashier	Counter staff	Open and close the register, sell, take payments, give receipts, process returns (with manager approval), view own transactions, add customers.
Inventory Clerk	Store keeper	Manage products, stock, purchase orders, goods received, transfers and stocktake. Cannot approve; cannot create supplier invoices.
Accountant	Office / accounts	Finance: expenses, cash, supplier and customer payments, purchase invoices and reports.

> **NOTE:** Your shop may have changed these roles. If something described in this guide is missing from your screen, you probably do not have that permission. Ask your manager.

2.2 The "second person" rule (separation of duties)

To prevent mistakes and fraud, many important actions must be approved by **a different person** than the one who created them:

- Purchase orders, purchase returns and stock transfers
- Stock adjustments and stocktake (count) differences
- Expenses
- Large discounts and returns at the POS (manager enters their own username and password)

The only exception is the Administrator account.

3. Administration

Choose the **Administration** tile. This part is mainly for the owner, manager and office staff. The sidebar groups the pages as: Overview, People & Security, Organisation, Partners, Pricing, Finance, Reports and System.

3.1 The Administration dashboard

The dashboard gives a quick picture of your business today:

- **Sales today / this month** and **Transactions today**.
- **Expenses this month** (only approved expenses are counted).
- **Customer receivables** - money customers owe you for credit sales.
- **Supplier payables** - money you owe suppliers.
- **Low / out of stock** - how many items need re-ordering.
- A **chart** of sales for the last 14 days, a chart of payment methods (cash, card…), and a list of the **top selling products**.

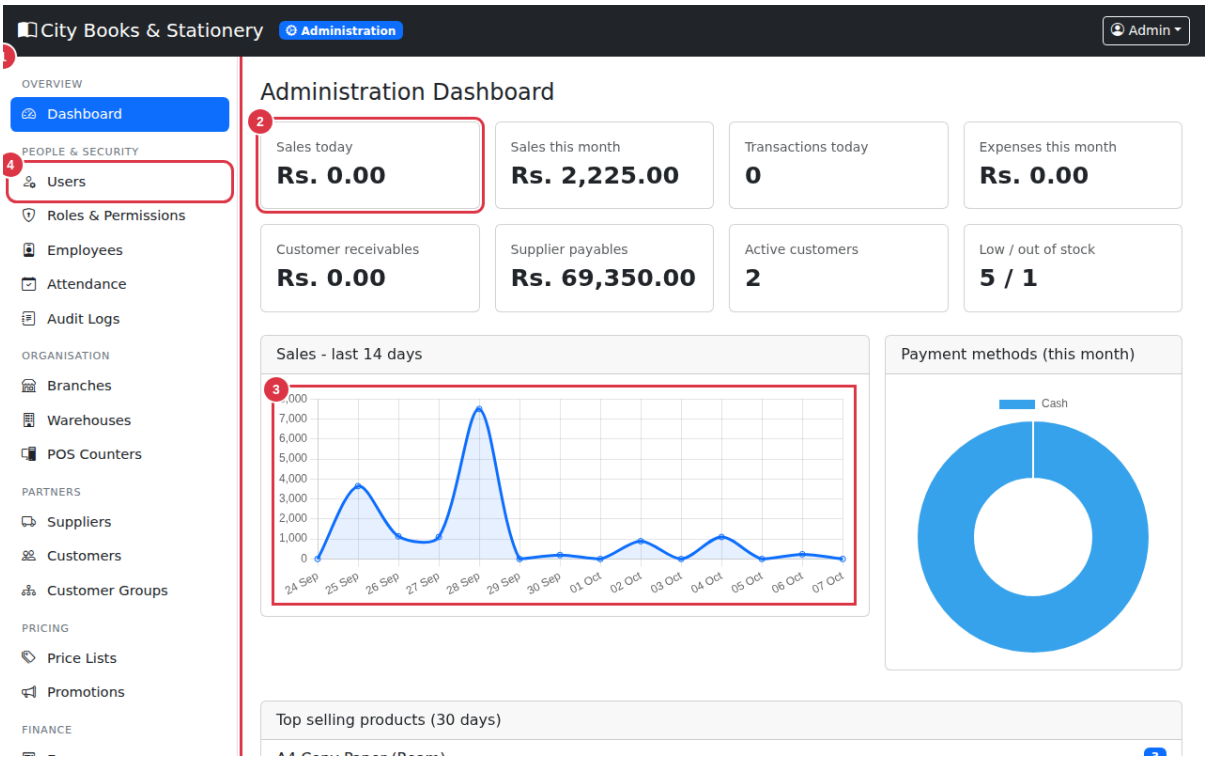

Figure 7. The Administration dashboard. 1 = Sidebar, 2 = Summary boxes, 3 = Sales chart for 14 days.

3.2 Users (people who can sign in)

A **user** is a login account for one person. Go to **Users** in the sidebar (People & Security).

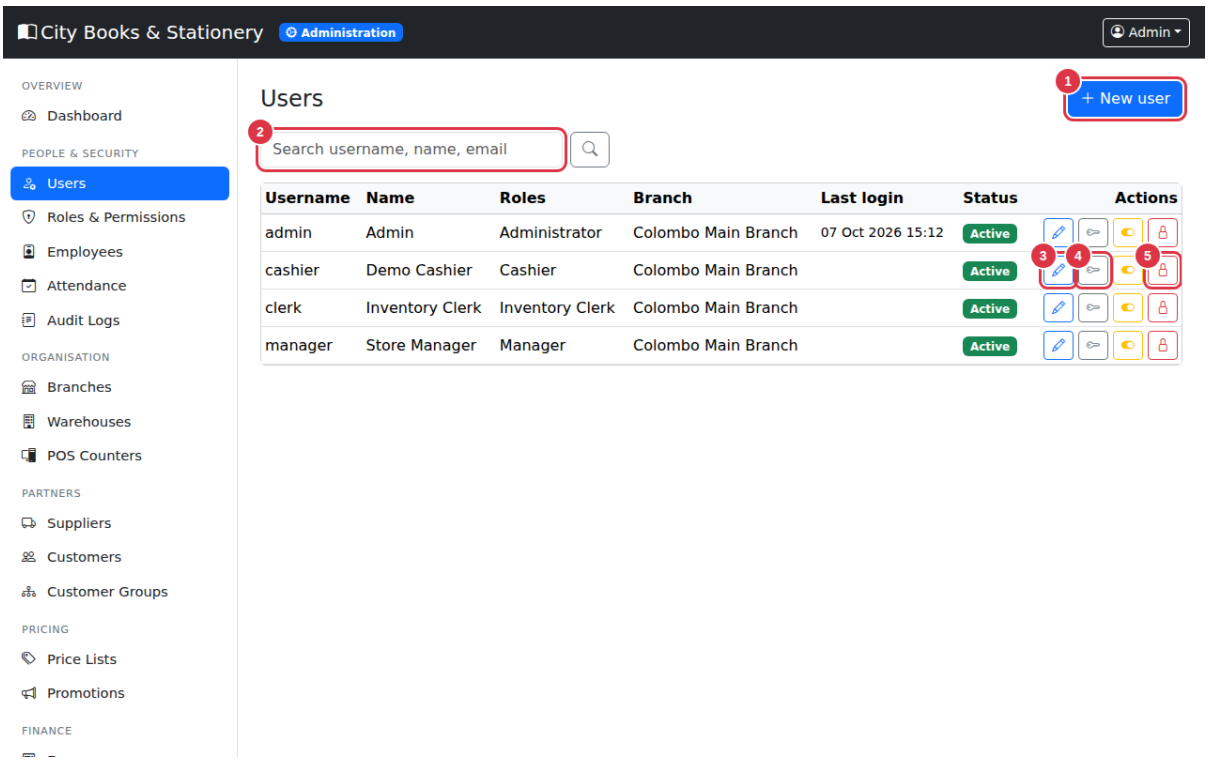

Figure 8. *The Users list. 1 = New user, 2 = Search box, 3 = Edit, 4 = Reset password, 5 = Lock / unlock.*

Add a new user

1. Click **Users** in the sidebar, then **New user**.
2. Type a **Username** (3 to 50 letters, numbers, dots or underscores - for example `nimali`). It must be different from all other usernames.
3. Type the **Full name**. Email and phone are optional.
4. Type a **Temporary password** (8+ characters with a capital letter, a small letter and a number). Tell the person this password privately.
5. (Optional) In **Linked employee**, choose the employee record of this person (see Section 3.4). In **Branch**, choose where they work.
6. Under **Roles**, tick the role(s) the person needs, for example **Cashier**.
7. Click **Save**.

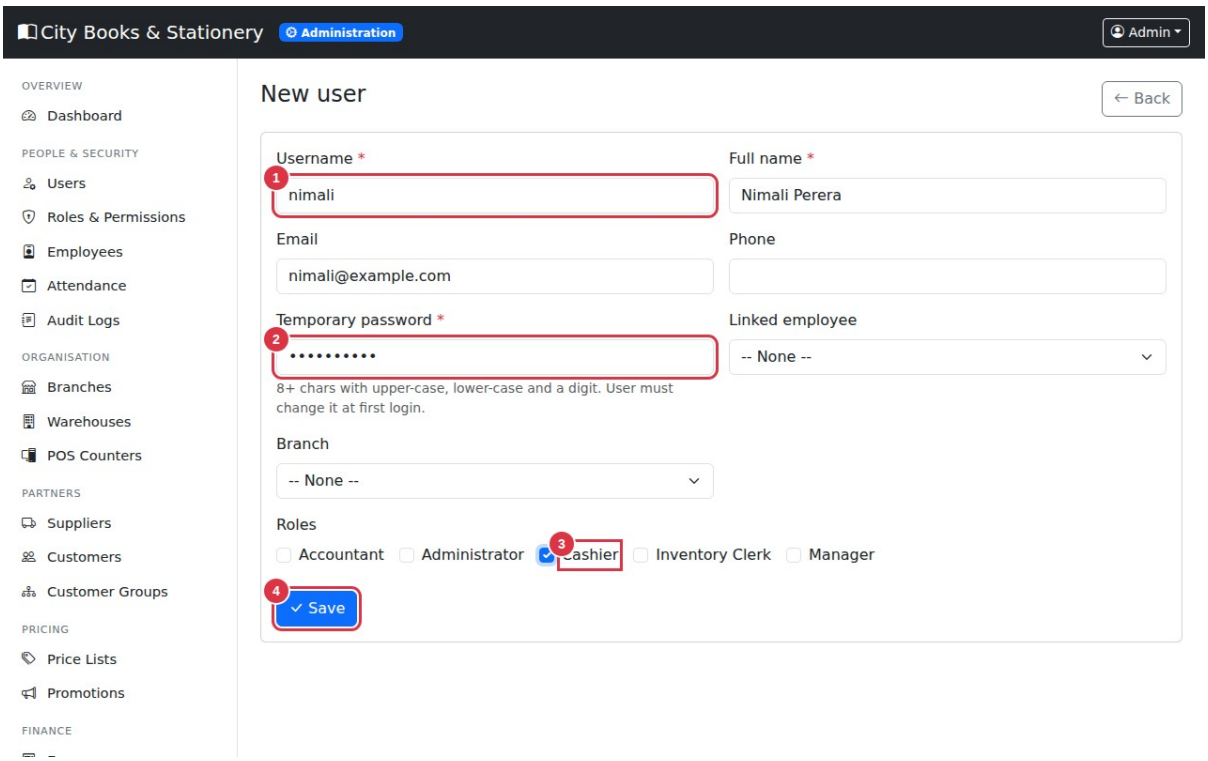

Figure 9. *The New user form. 1 = Username, 2 = Temporary password, 3 = Role, 4 = Save.*

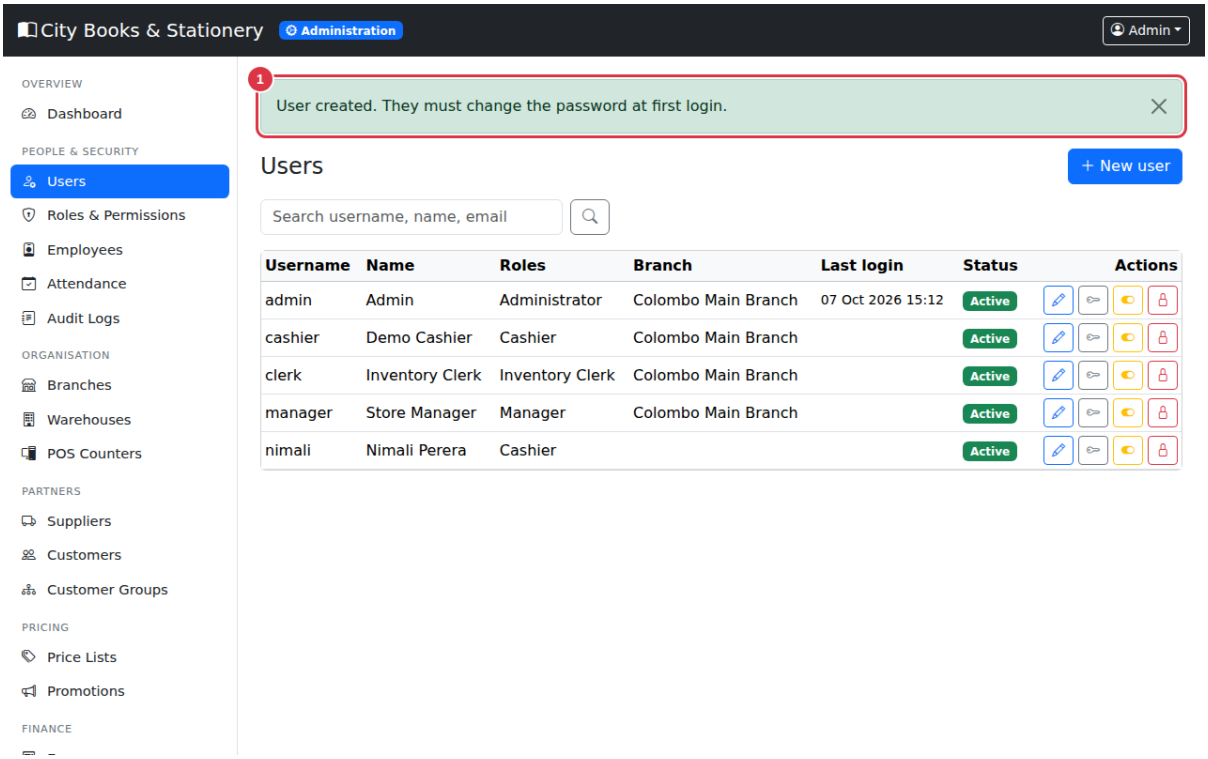

Figure 10. *After saving, the user appears in the list. A green message confirms it.*

> **NOTE:** The new user must change the temporary password the first time they sign in (Section 1.3).

Change a user's details or roles

1. In the Users list, click the **pencil** icon beside the person.
2. Change the name, branch or roles. (The username cannot be left empty or duplicated.)

3. Click **Save**.

Reset a forgotten password

1. Click the **key** icon beside the user.
2. Type a new temporary password twice.
3. Click **Reset**. The user must choose their own password at the next sign-in.

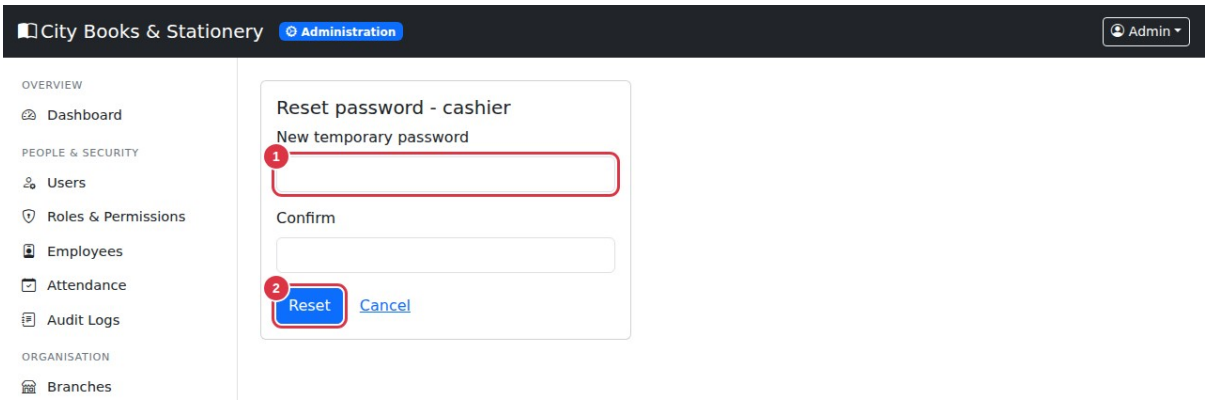

Figure 11. *Resetting a password. 1 = New temporary password box, 2 = Reset button.*

Lock, unlock, activate or deactivate

- **Lock / unlock (padlock icon)** - a locked user cannot sign in. Use it to stop access quickly.
- **Activate / deactivate (toggle icon)** - deactivate a person who has left the shop. Their history is kept.
- You cannot lock or deactivate **your own** account, and the system always keeps at least one active administrator.

3.3 Roles & Permissions

Go to **Roles & Permissions**. Here you decide which actions each role may do.

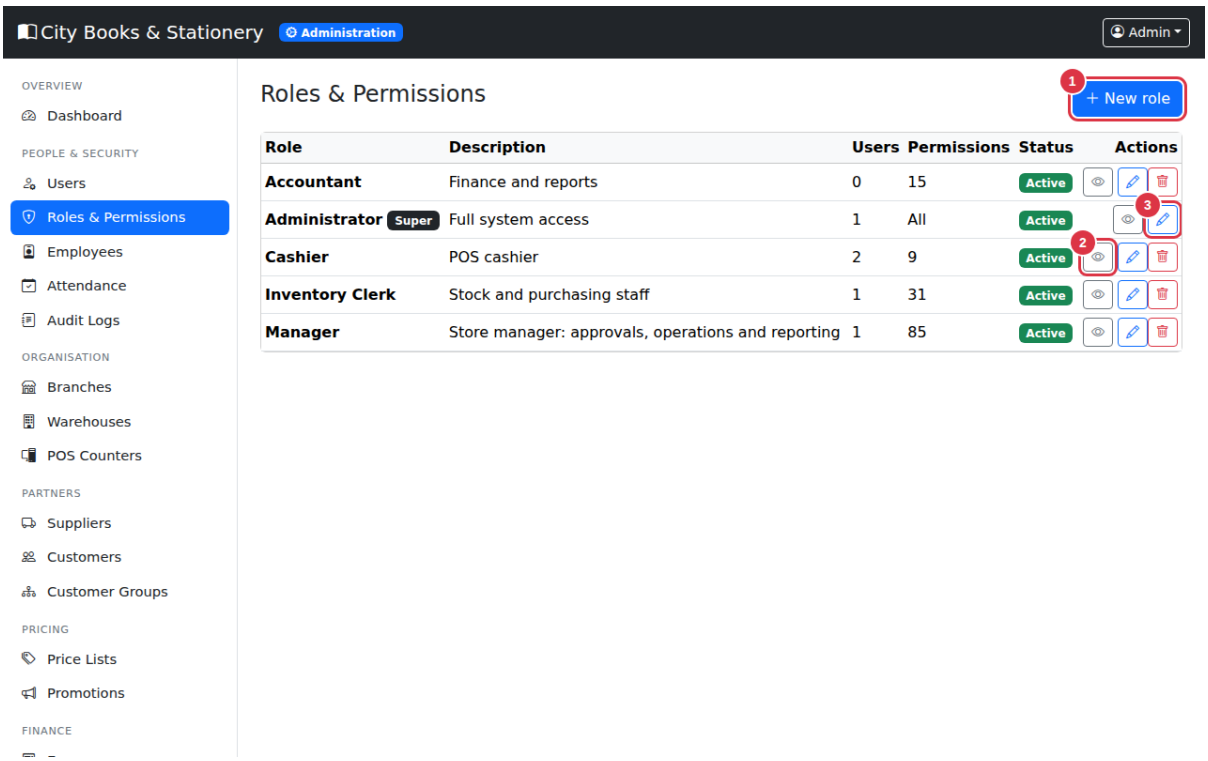

Figure 12. *The roles list. 1 = New role, 2 = View permissions (eye), 3 = Edit (pencil).*

Create or edit a role

1. Click **New role** (or the pencil beside an existing role).
2. Type the **Role name** and an optional description.
3. Tick the permissions the role needs. They are grouped by system (Administration, POS, Product & Inventory) and by feature (for example Users, Sales, Stock).
4. Use **Enable all module access** at the top of a group to tick everything in that group, or **toggle row** to tick/untick one line.
5. Click **Save role**.

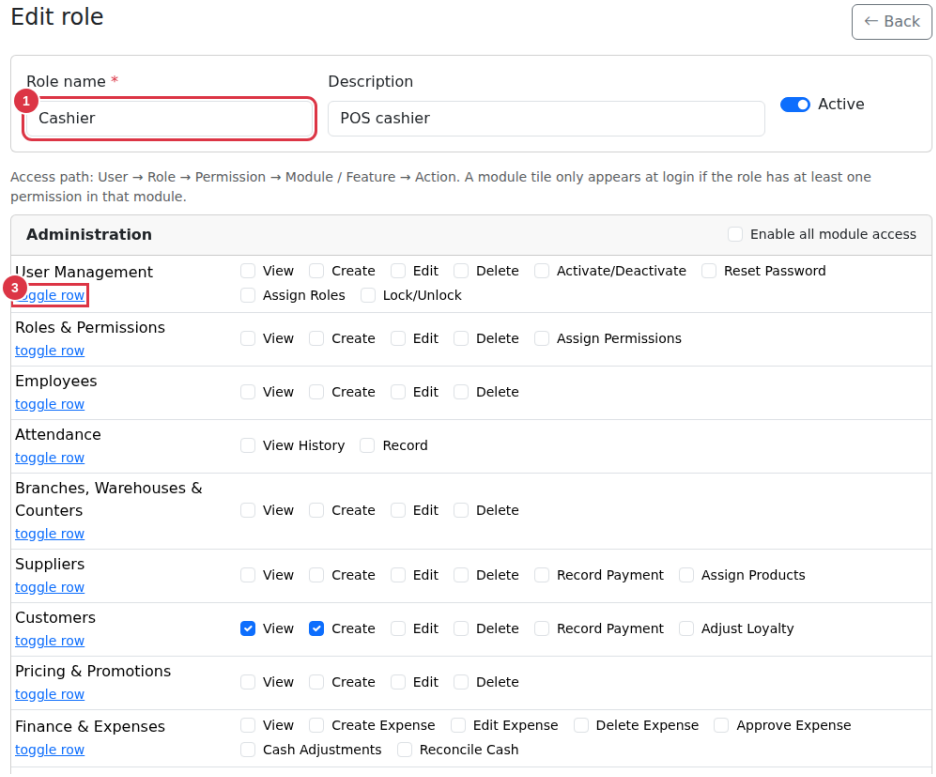

Figure 13. The role form. 1 = Role name, 2 = Enable all module access (POS), 3 = toggle a whole row, 4 = Save role.

> **NOTE:** A system tile (Administration, POS, Product & Inventory) appears for a user only if their role has at least one permission in that system.

> **IMPORTANT:** Be careful when giving permissions such as **Approve**, **Void**, **Change price** or **Adjust stock**. Give them only to trusted people. The Administrator role cannot be edited or deleted.

To remove a role, click the bin icon. If people still use the role, it is deactivated instead of deleted.

3.4 Employees and attendance

Employees

Go to **Employees**. This is the staff list (name, designation, phone, branch). An employee record is not the same as a login: a user account can be linked to an employee, so that sales can be traced to a staff member.

1. Click **Employees**, then **New**.
2. Employee No is created automatically (EMP-0001…). Fill in the **Full name**, designation, phone, branch and hire date.
3. Click **Save**.

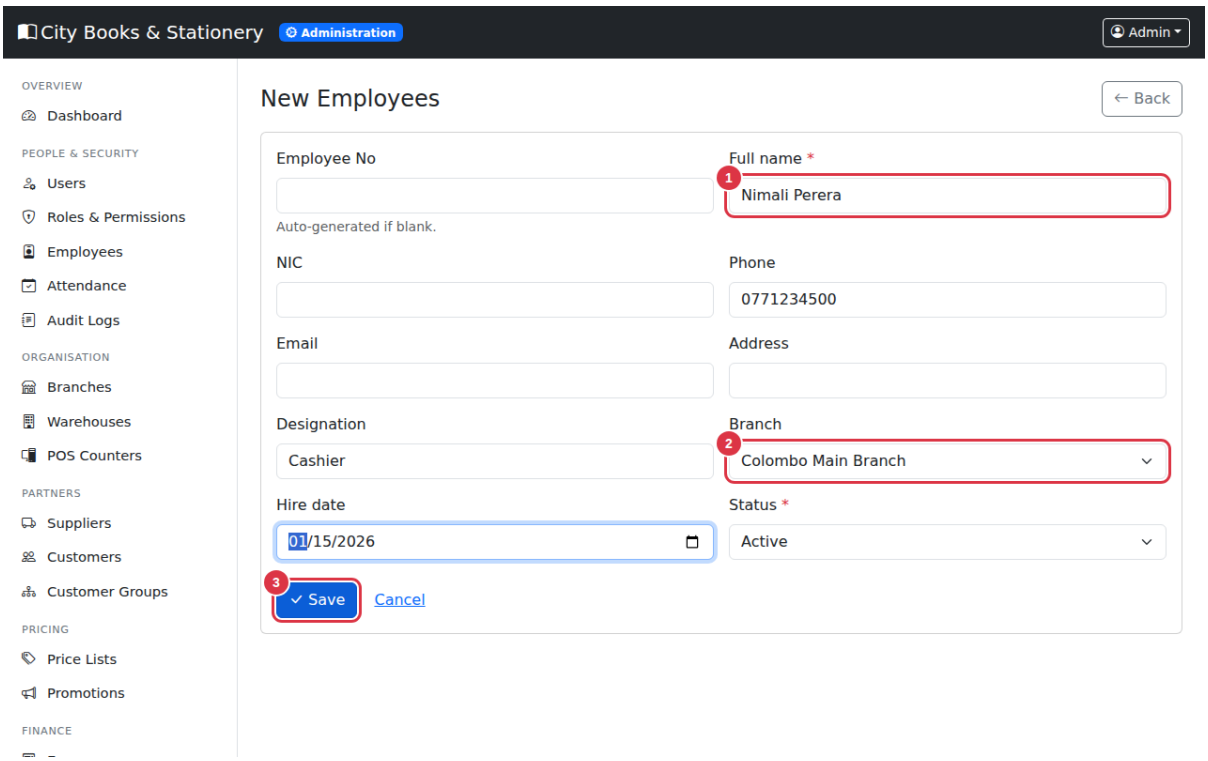

Figure 14. *The employee form. 1 = Full name, 2 = Branch, 3 = Save.*

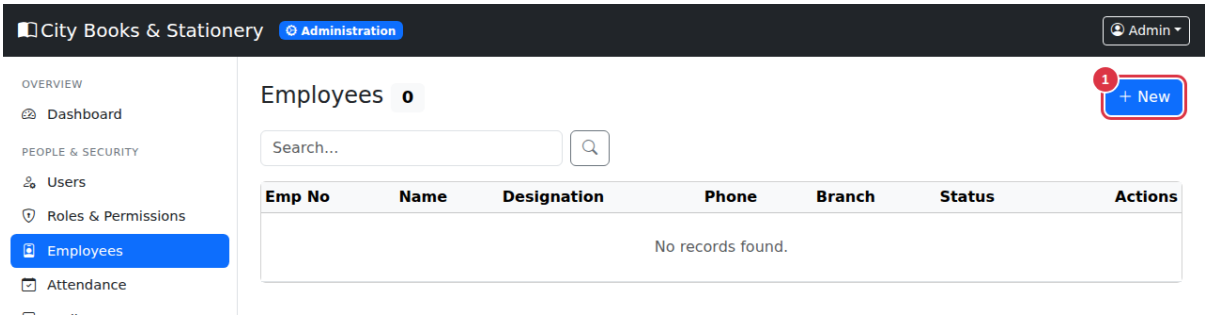

Figure 15. *The employee list.*

> **TIP:** If a person leaves, set their status to **Inactive** (toggle icon) instead of deleting them.

Recording attendance

1. Click **Attendance**.
2. Choose the **date** at the top (today by default) and click **Load**.
3. For each employee, choose the **status**: Present, Absent, Late, Leave or Half day. Enter the **In** and **Out** times and a note if needed.
4. Click **Save attendance**.

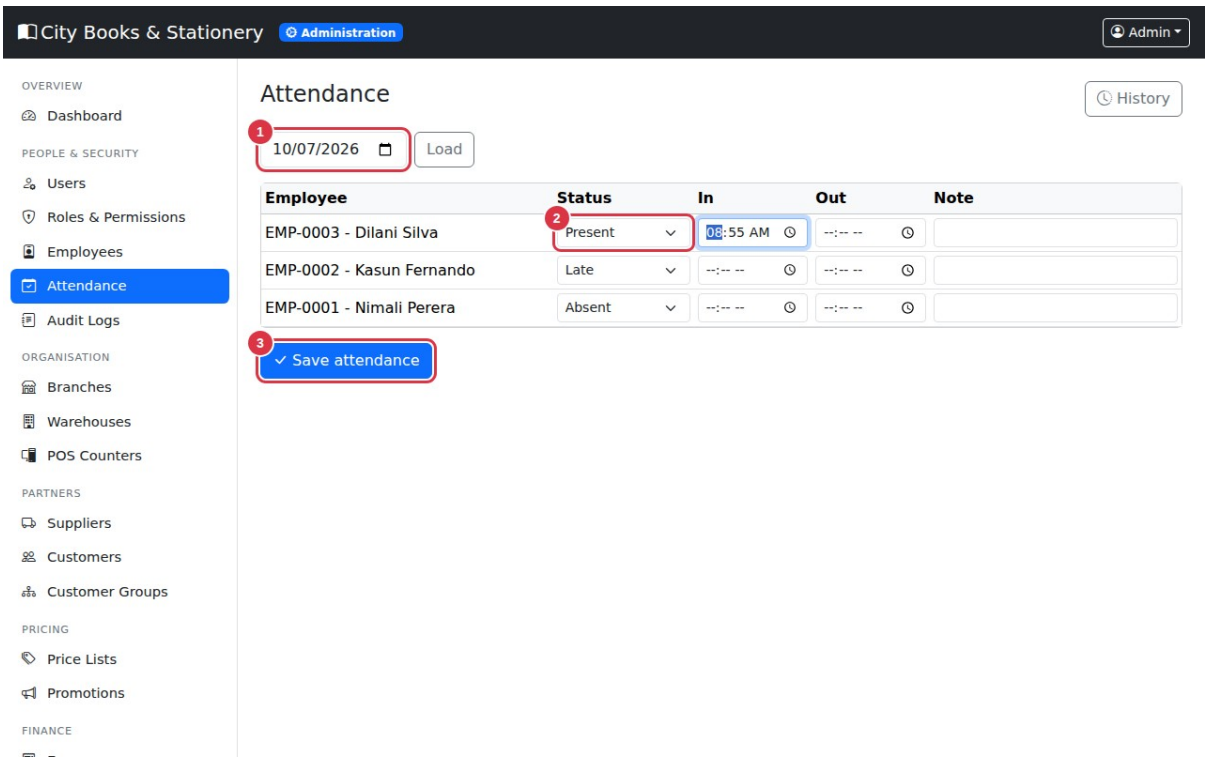

Figure 16. *The attendance page. 1 = Date, 2 = Status of an employee, 3 = Save attendance.*

To see one person's attendance for a period, click **History** (top right), choose the employee and dates, and click **Show**. You cannot record attendance for a future date.

3.5 Branches, warehouses and counters

If your business has more than one shop, each shop is a **branch**. A branch has one or more **warehouses** (places where stock is kept - the shop floor and the back store, for example) and one or more **POS counters** (cash registers).

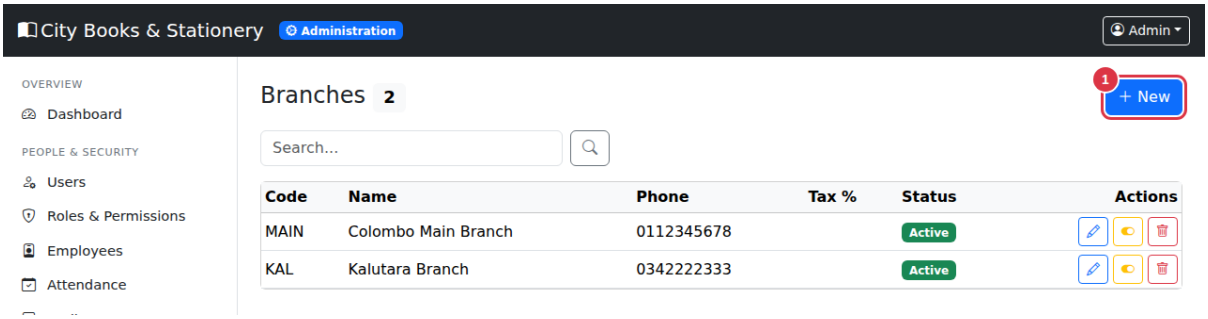

Figure 17. *The Branches list.*

- **Branches** - add a branch with its name, address, phone, optional tax rate and the message printed at the bottom of receipts.
- **Warehouses** - add a stock location to a branch. Tick **Default warehouse** for the one the POS counters of that branch sell from.
- **POS Counters** - add each cash register of a branch (Counter 1, Counter 2…).

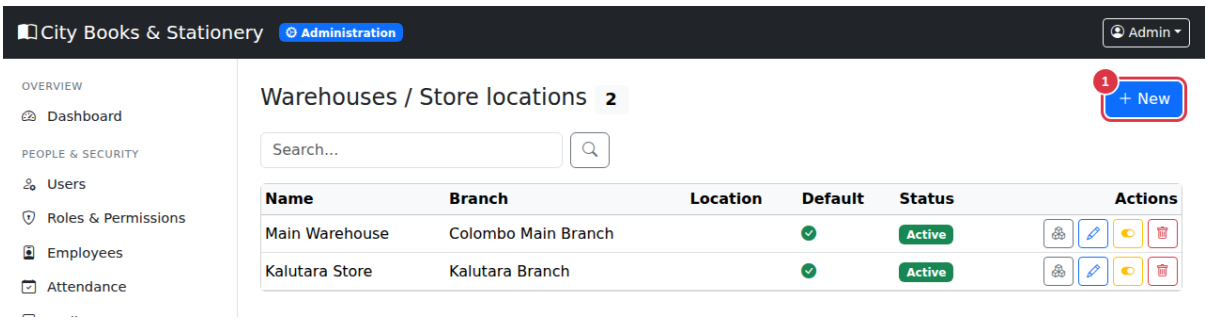

Figure 18. The Warehouses list. 1 = New.

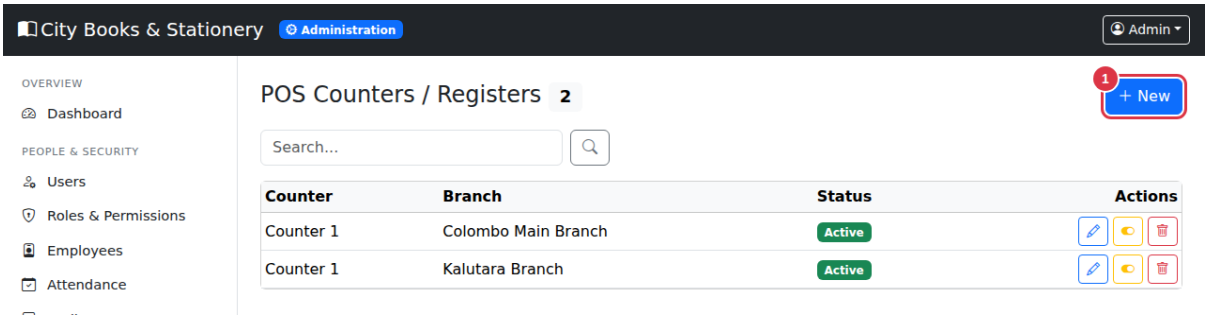

Figure 19. The POS Counters list.

> **IMPORTANT:** Each branch must have at least one active warehouse and one counter, otherwise the cashier cannot open the register.

3.6 Suppliers

Suppliers are the companies you buy books and stationery from.

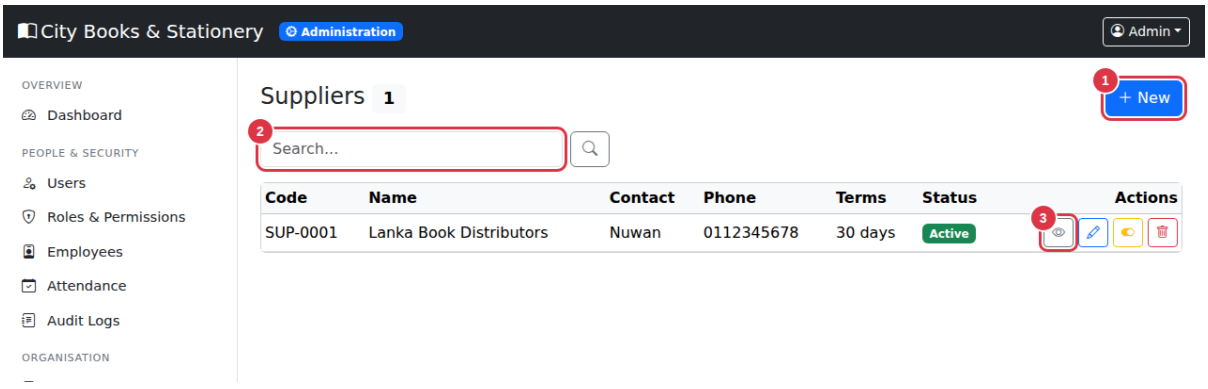

Figure 20. The supplier list. 1 = New, 2 = Search, 3 = Profile (eye).

Add a supplier

1. Click **Suppliers** (Partners), then **New**.
2. Type the supplier **Name**, contact person, phone, email and payment terms (for example "30 days").
3. Click **Save**. A code such as SUP-0002 is created automatically.

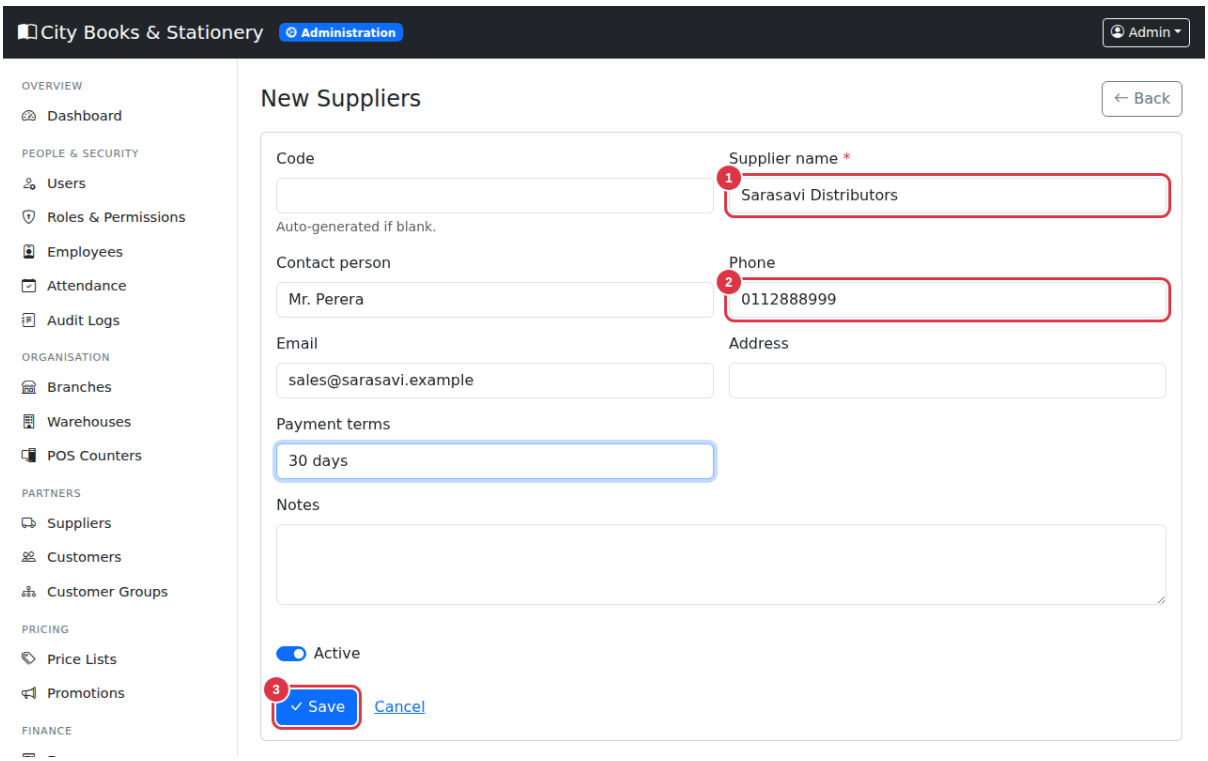

Figure 21. *The supplier form. 1 = Name, 2 = Phone, 3 = Save.*

The supplier profile - see what you owe and pay the supplier

Click the **eye** icon of a supplier. The profile shows the **outstanding balance** (what you owe), purchase orders, purchase invoices, payments and the products this supplier supplies.

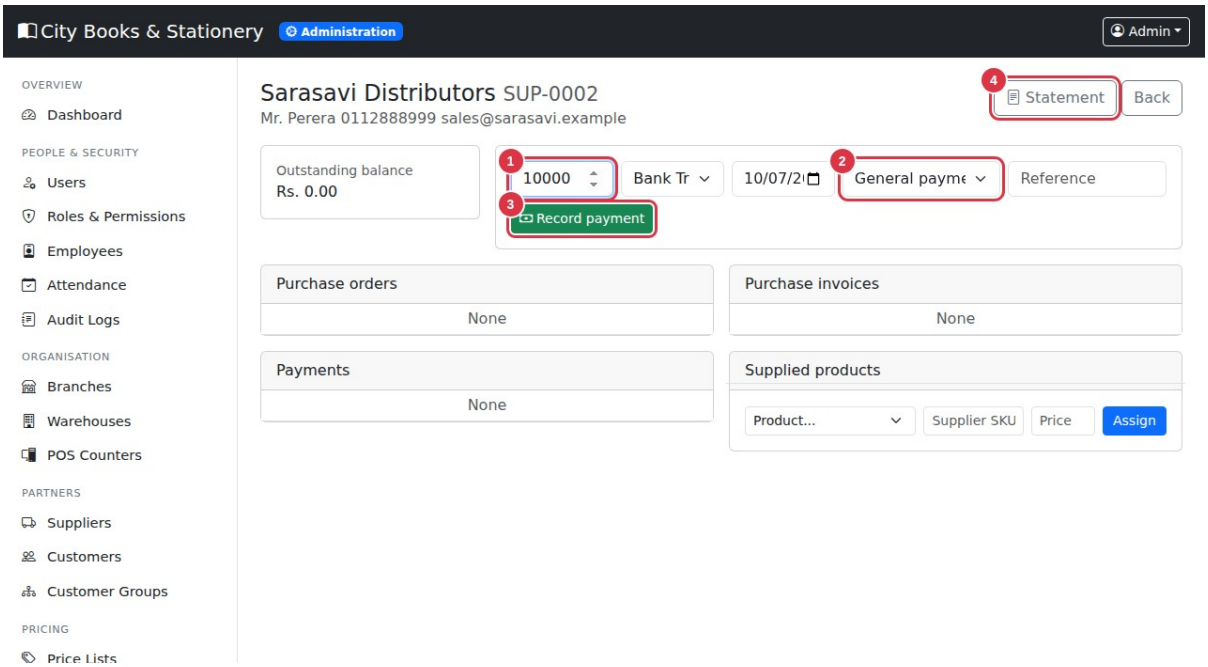

Figure 22. *The supplier profile. 1 = Amount to pay, 2 = Pay a specific invoice (or "General payment"), 3 = Record payment, 4 = Statement.*

1. Open the supplier profile.
2. Type the **Amount**, choose the **payment method** (cash, card, bank transfer or digital), the **date**, and (optional) choose the **invoice** you are paying and type a reference such as a cheque or transfer number.
3. Click **Record payment**.

> **IMPORTANT:** The system does not let you pay more than the supplier is owed.

Click **Statement** to see all invoices, payments and credits with a running balance. You can download it as **CSV** (for Excel), as **PDF**, or **Print** it.

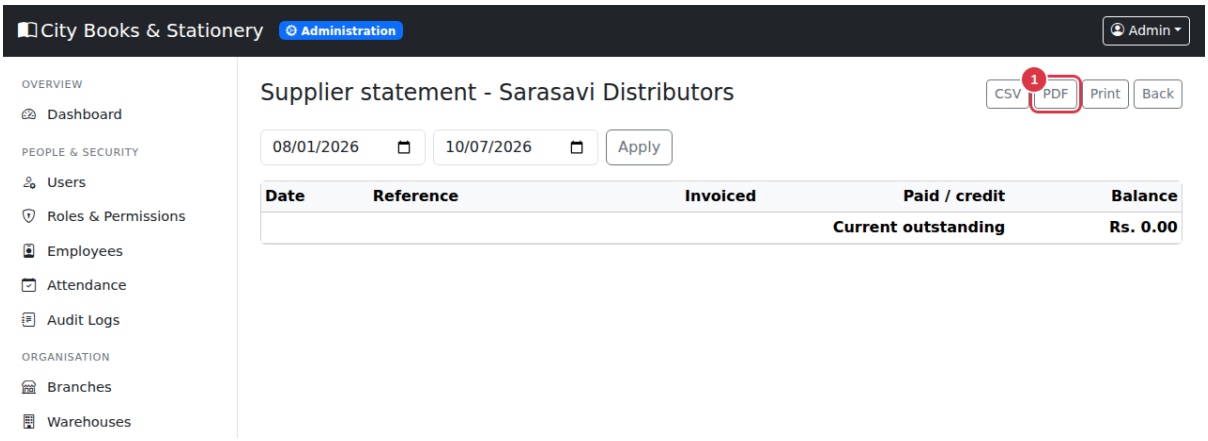

Figure 23. The supplier statement. 1 = PDF download.

At the bottom of the profile you can **assign products** to the supplier (choose a product, optional supplier code and price). This helps you remember who supplies what.

3.7 Customers

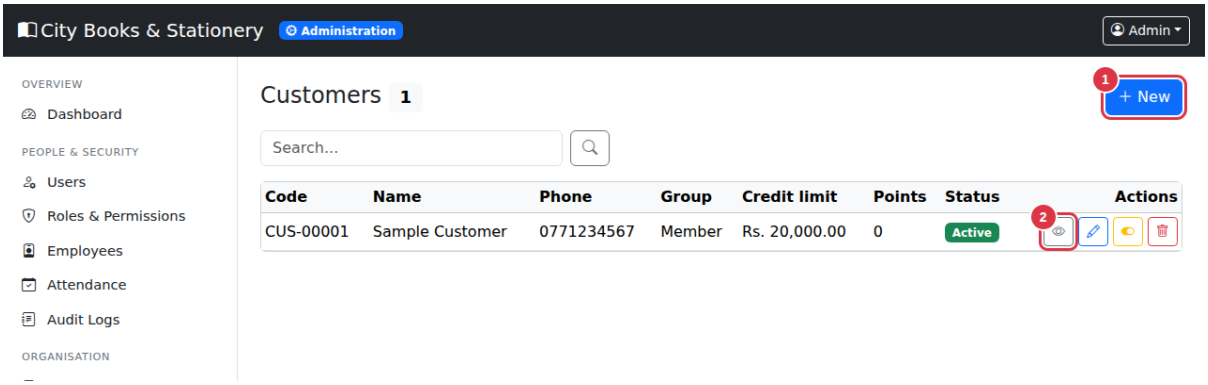

Figure 24. The customer list. 1 = New, 2 = Profile (eye).

Add a customer

1. Click **Customers**, then **New**.
2. Type the **Name** and **Phone** (optional but useful to find the customer at the counter).
3. Choose a **Customer group** (Retail, Wholesale or Member). The group decides which price the customer gets (see Section 3.8).
4. Type a **Credit limit** if you allow this customer to buy on credit. Leave **0** for no credit.
5. Click **Save**.

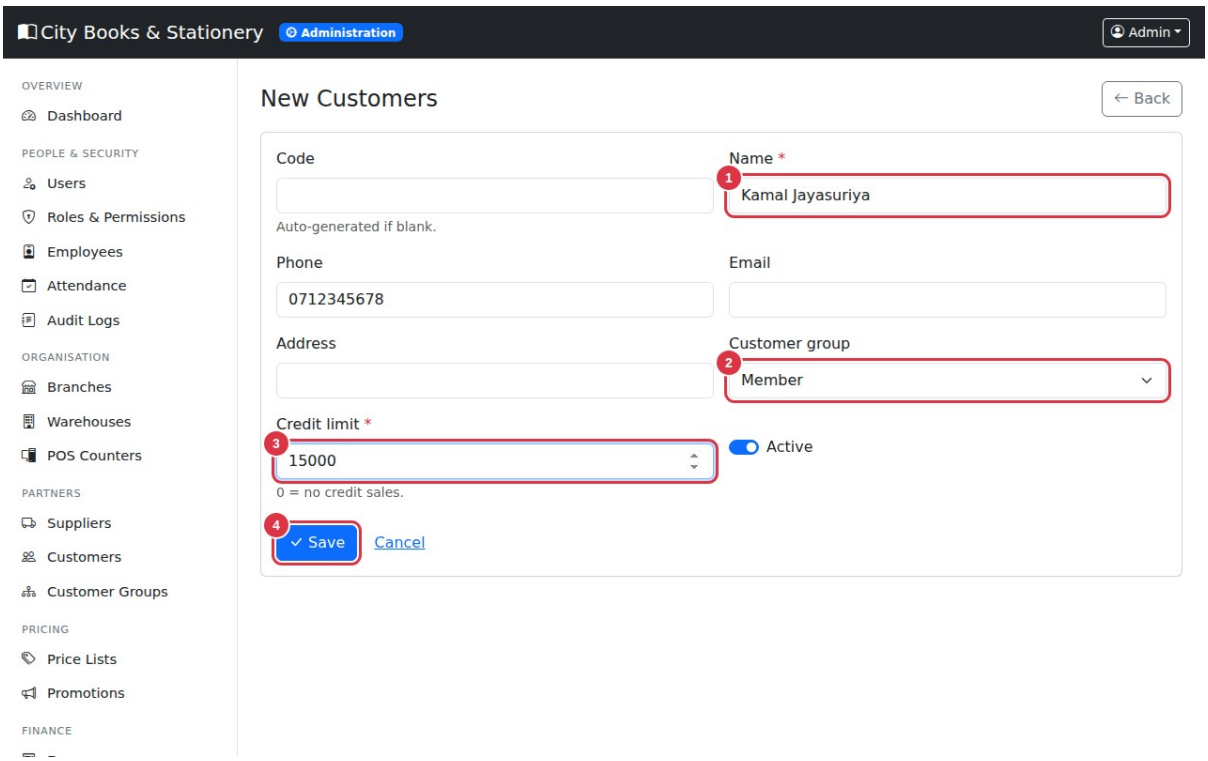

Figure 25. *The customer form. 1 = Name, 2 = Customer group, 3 = Credit limit, 4 = Save.*

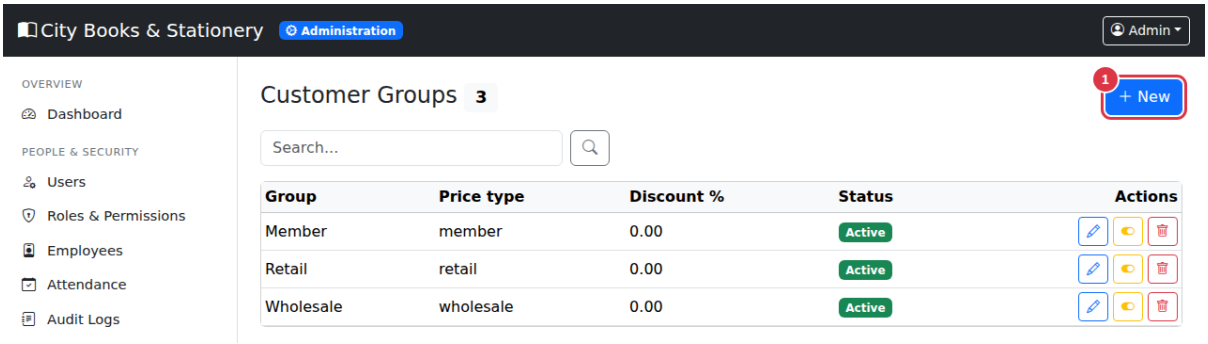

Figure 26. *Customer groups. Each group has a price type (retail, wholesale or member) and an optional standing discount %.*

The customer profile

Click the **eye** icon beside a customer to see their **outstanding balance**, **credit limit**, **loyalty points**, purchase history and payments.

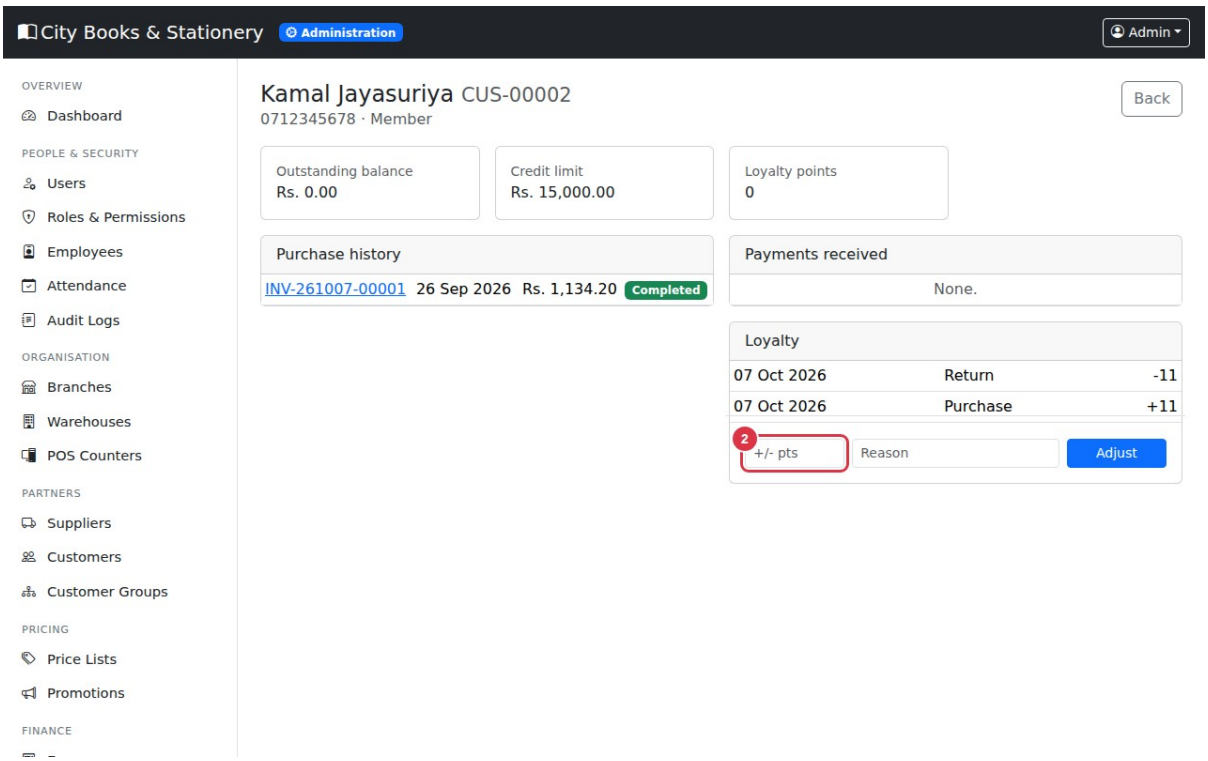

Figure 27. The customer profile. 1 = Receive a payment (shown when the customer owes money), 2 = Adjust loyalty points.

- **Receive a payment** - when a customer pays what they owe, type the amount and method and click **Record receipt**. The amount cannot be more than the balance.
- **Adjust loyalty points** - type a plus or minus number of points and the reason, then click **Adjust**. (Points are also earned automatically with every sale - by default 1 point for every Rs. 100 spent.)

3.8 Pricing and promotions

Price lists - special prices for a customer group

A price list gives a different price to a group of customers (for example Members). Items not in the list keep their normal price.

1. Click **Price Lists**, then **New**.
2. Type a **name**, choose the **customer group**, and (optional) set a start and end date.
3. Click **Save**.
4. On the list, click the **list icon** (Items). Type the product **SKU, barcode or ISBN**, type the **price** and click **Add / update**.

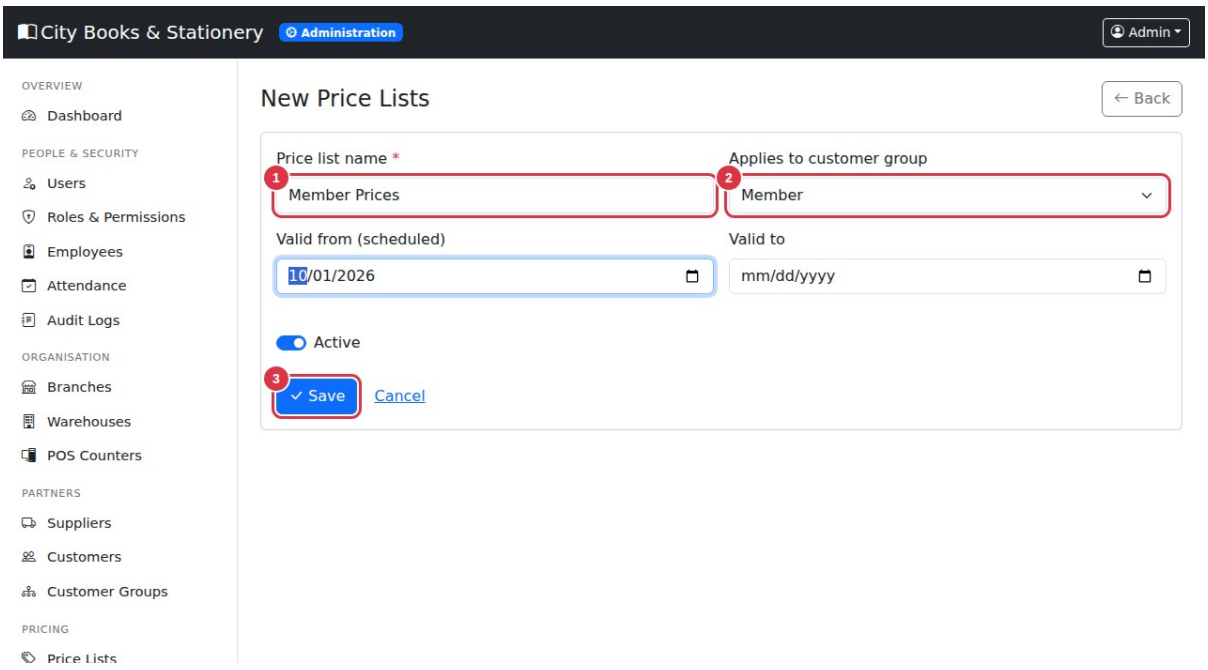

Figure 28. The price list form. 1 = Name, 2 = Customer group, 3 = Save.

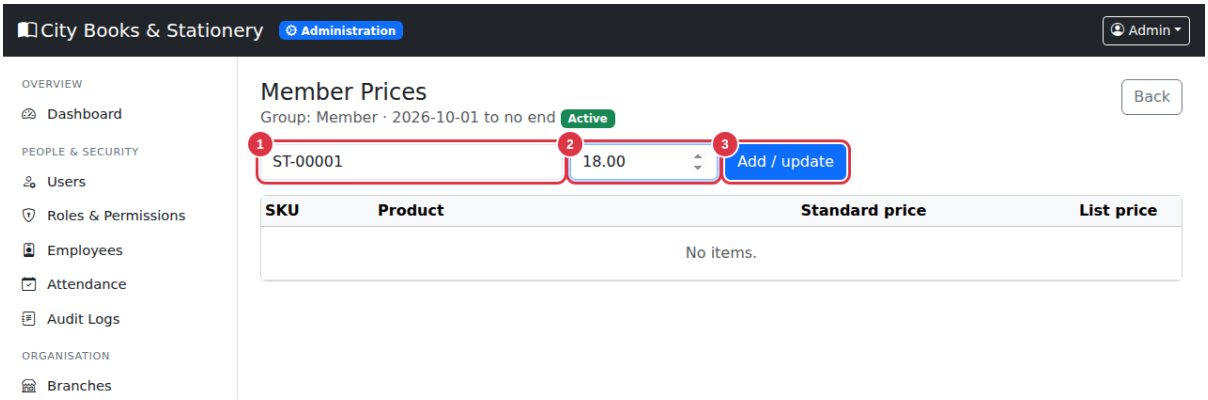

Figure 29. Adding products to a price list. 1 = SKU / barcode / ISBN, 2 = Price, 3 = Add / update.

Promotions, coupons and quantity discounts

1. Click **Promotions**, then **New**.
2. Type a **name** (for example "Back to School 10%").
3. Choose the **type** (percentage, or a fixed amount off per item) and type the **value**.
4. Choose what it **applies to**: all products, a category, or one product. Then choose the category or product.
5. Set a **minimum quantity** if the discount is only for buying several (for example 10).
6. (Optional) Choose a customer group, type a **coupon code** (leave empty for an automatic promotion), and set the start and end dates.
7. Click **Save**.

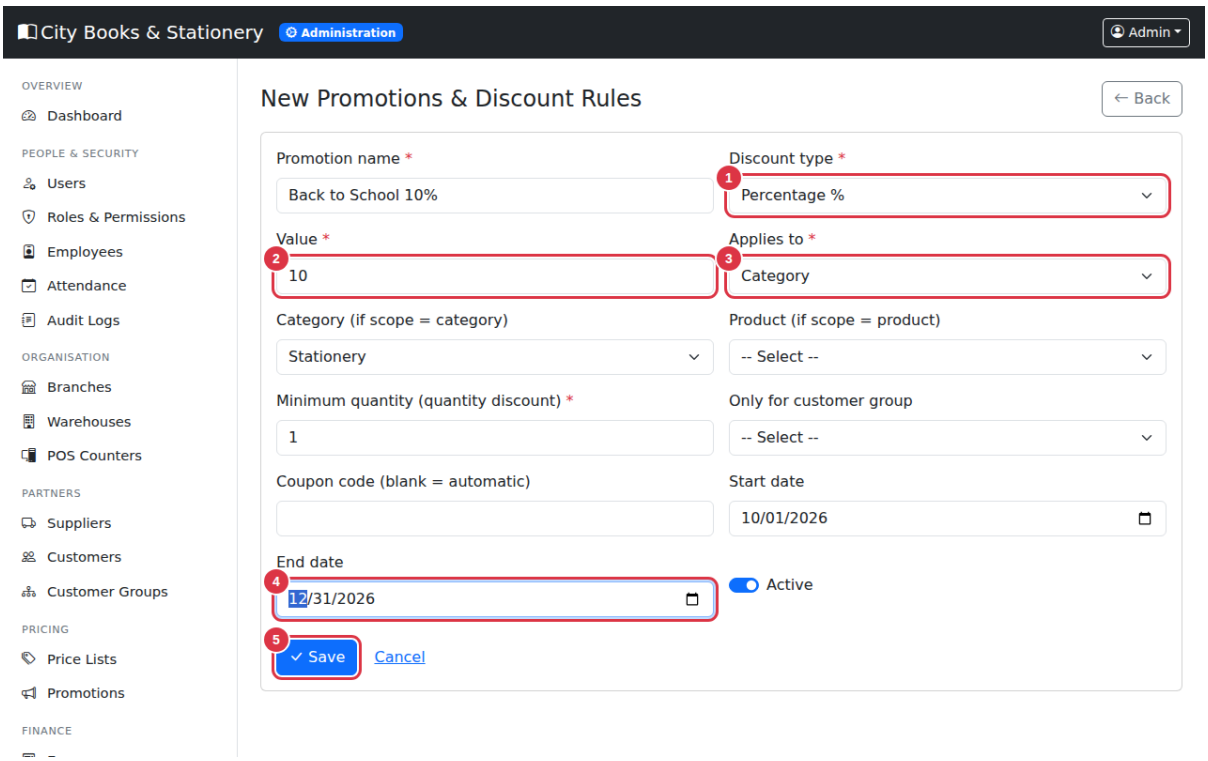

Figure 30. *The promotion form. 1 = Type, 2 = Value, 3 = Applies to, 4 = End date, 5 = Save.*

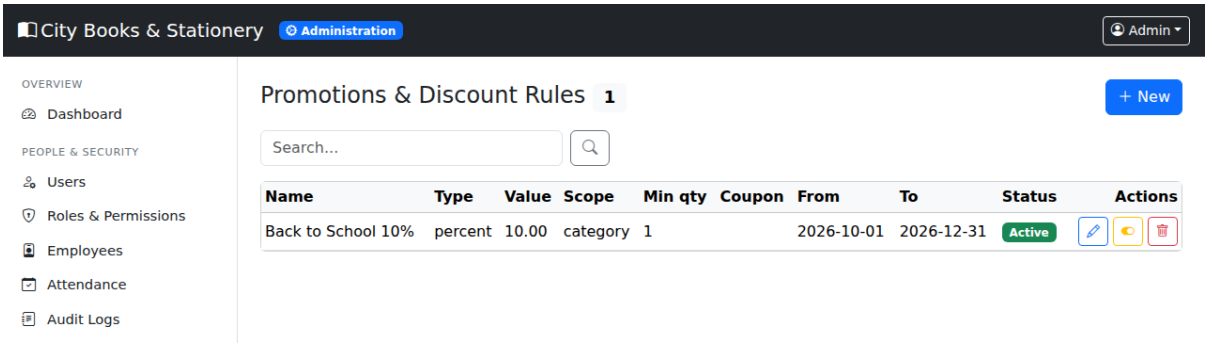

Figure 31. *The promotions list.*

> **NOTE:** If several promotions match an item, the system gives the **best single discount** - discounts are not added together. Promotions work automatically at the POS during their dates.

3.9 Finance

Expenses

Record shop expenses such as rent, electricity and transport.

1. Click **Expenses**, then **New**.
2. Type the **Category** (choose a suggestion or type your own), a short **description**, the **amount**, the **date** and how it was paid.
3. Click **Save**. The expense is now **Pending**.
4. A manager or accountant (a different person) opens the list and clicks the green **tick** to approve, or the red **cross** to reject.

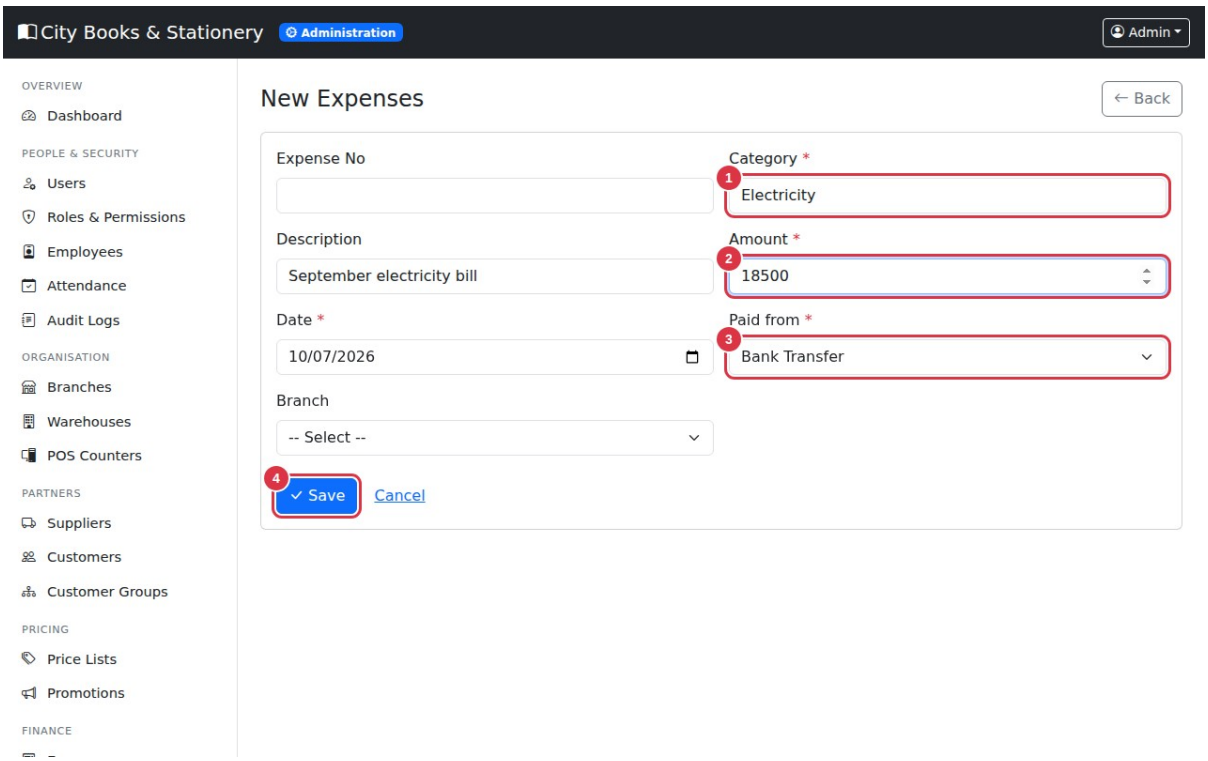

Figure 32. *The expense form. 1 = Category, 2 = Amount, 3 = Paid from, 4 = Save.*

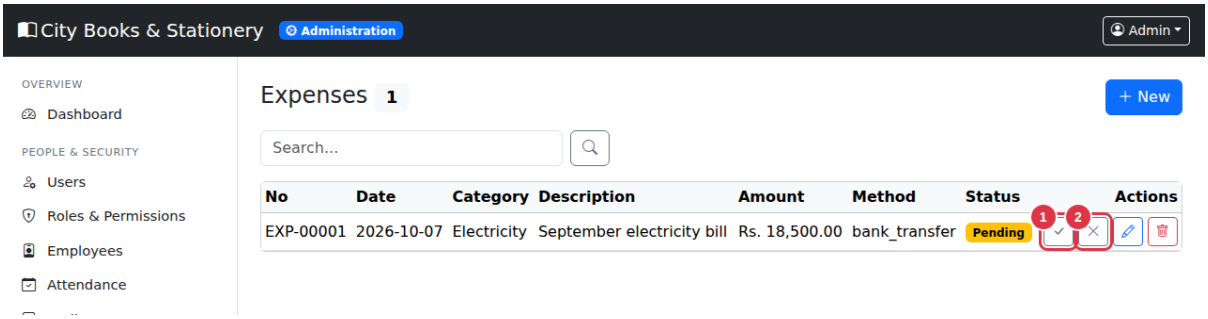

Figure 33. *Pending expenses. 1 = Approve (tick), 2 = Reject (cross).*

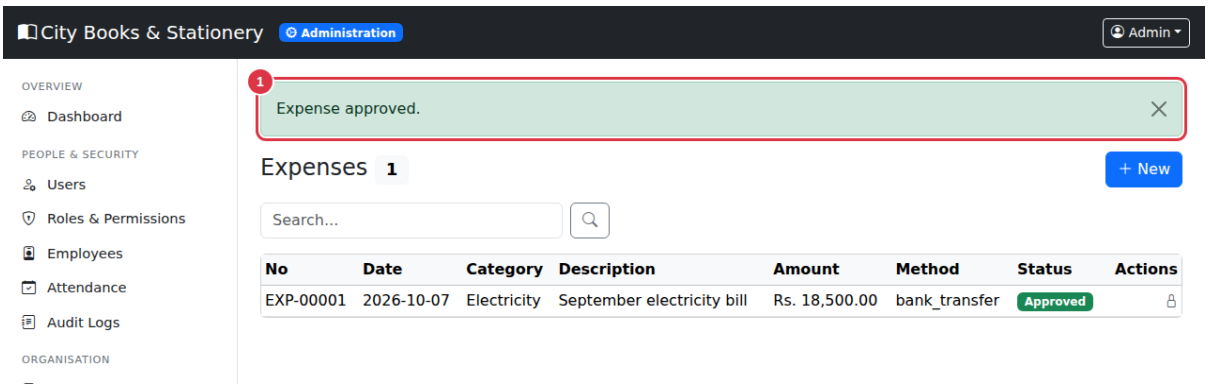

Figure 34. *After approval the expense is locked and counted in the reports.*

> **IMPORTANT:** Approved or rejected expenses cannot be edited. Only approved expenses are counted in profit and loss.

Financial transactions

Transactions shows every money movement: sales, refunds, supplier payments, customer payments, expenses and cash adjustments. Use the filters (dates, type, in/out, branch) and **CSV** to export.

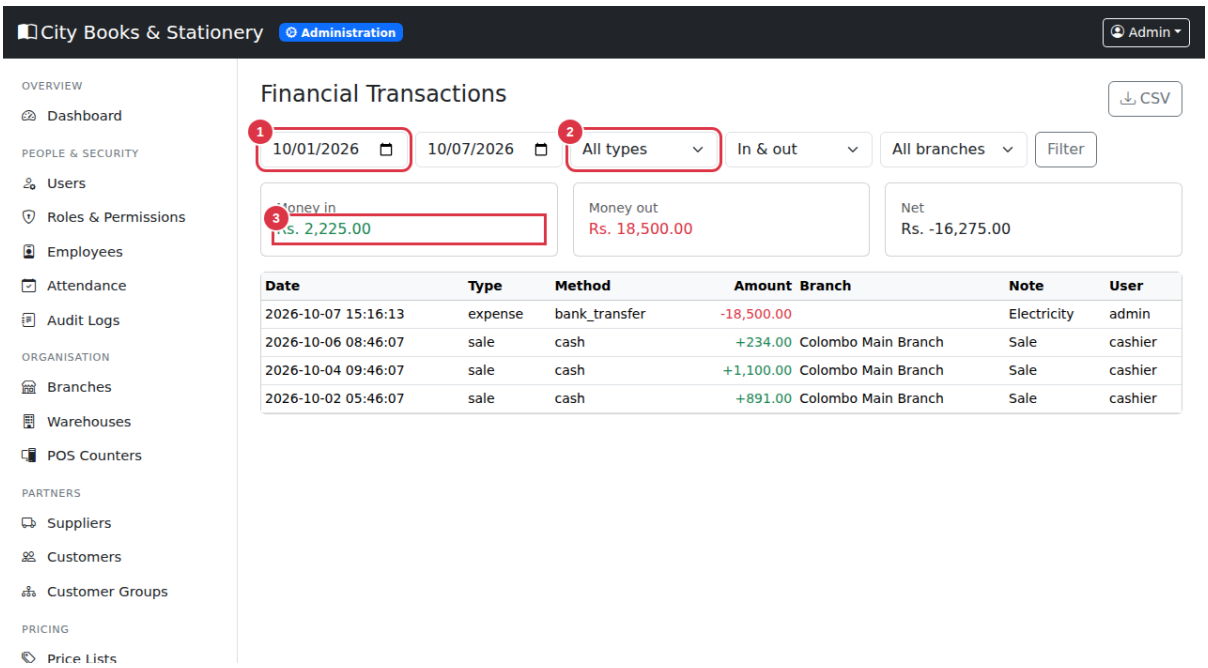

Figure 35. *Financial transactions. 1 = From date, 2 = Type, 3 = Money in / out totals.*

Cash drawer and reconciliation

Cash Drawer lists every cashier shift (register session) with the opening cash, the **expected** cash calculated by the system, the cash the cashier **counted**, and the **variance** (difference). A red variance means the drawer was short or over.

1. Open **Cash Drawer**.
2. Check the closed sessions. If the numbers are acceptable, click **Reconcile** beside the session. Its status becomes *Reconciled*.
3. To record cash taken out or put into the drawer outside of sales (for example change money from the bank), use **Record cash adjustment**: choose the branch, **Cash in** or **Cash out**, the amount and the reason.

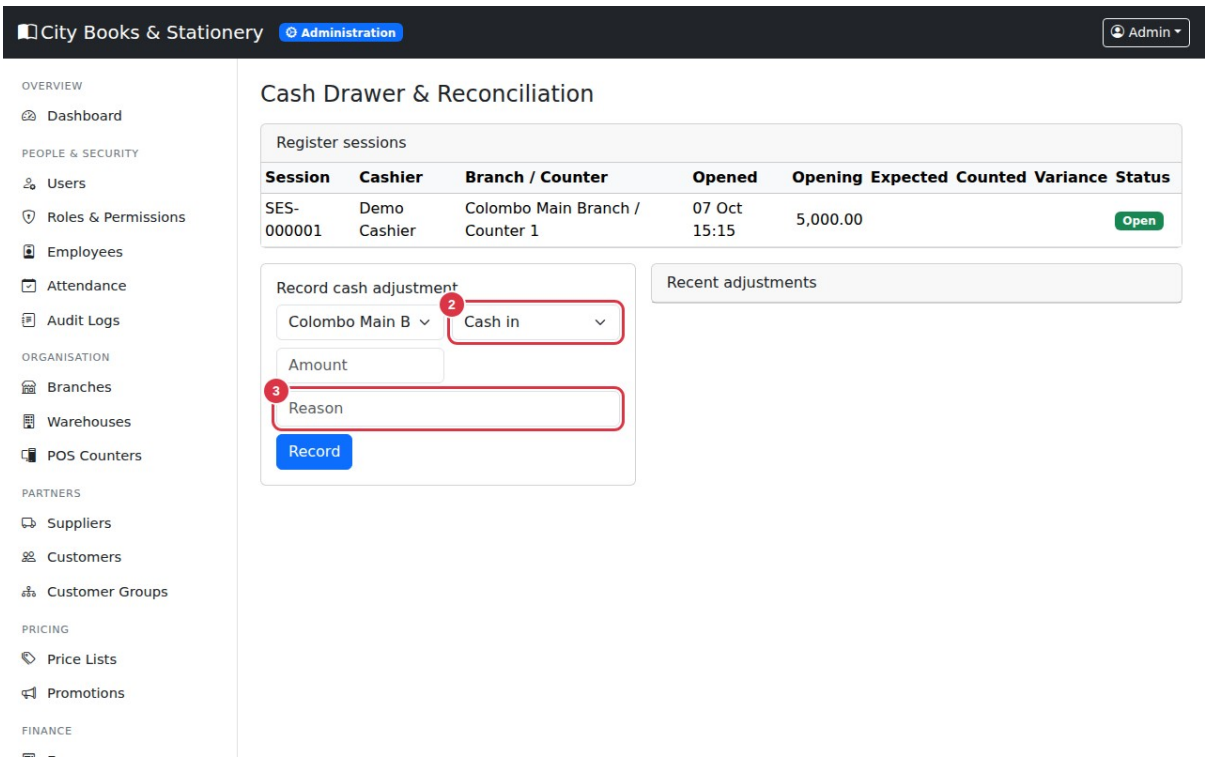

Figure 36. The cash drawer page. 1 = Reconcile, 2 = Cash in / out, 3 = Reason.

3.10 Reports

Click **Reports**. Choose a report from the list. Reports are grouped as Sales, Inventory, Purchasing, Suppliers, Customers, Finance, Employees and Audit.

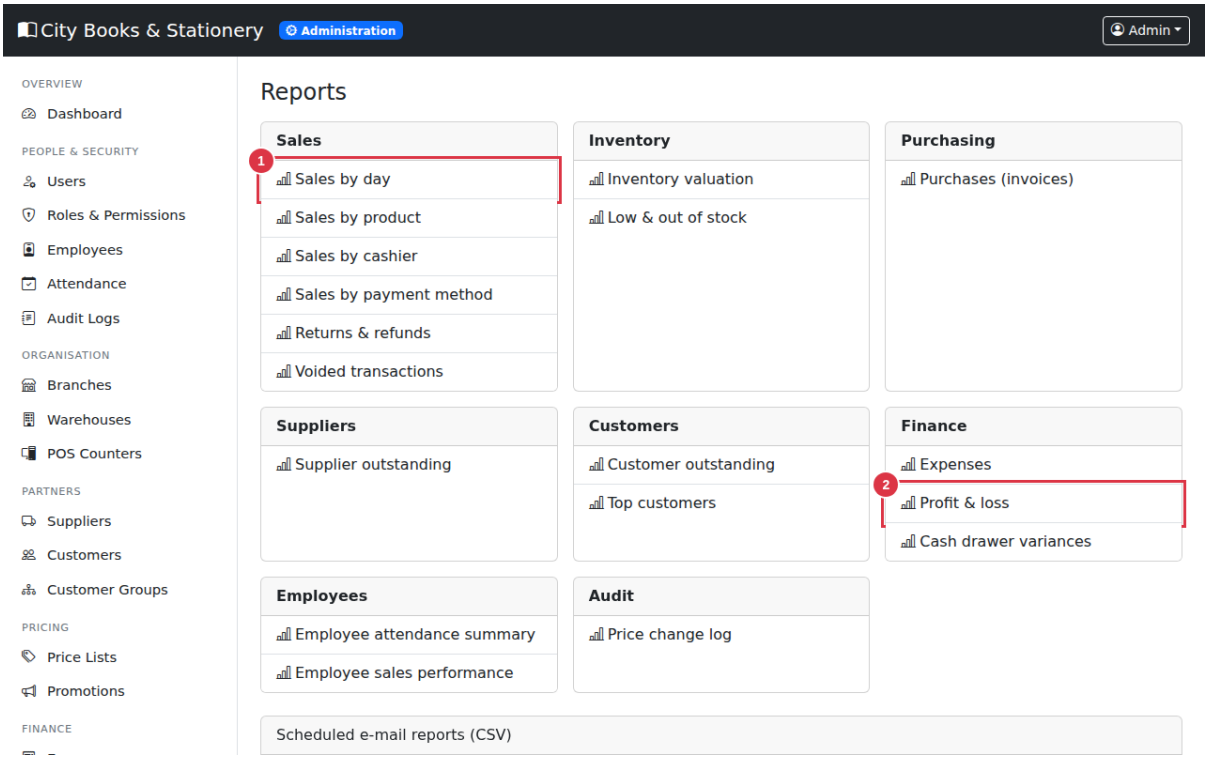

Figure 37. The reports list. 1 = Sales by day, 2 = Profit & loss.

1. Click the report name.
2. For reports with dates, choose **From** and **To**, then click **Apply**.

3. (Optional) Tick **Compare with previous period** to see the same totals for the period just before and the percentage change.
4. Use **Search within report** to find a row.
5. To keep or share the report, use the buttons at the top right.

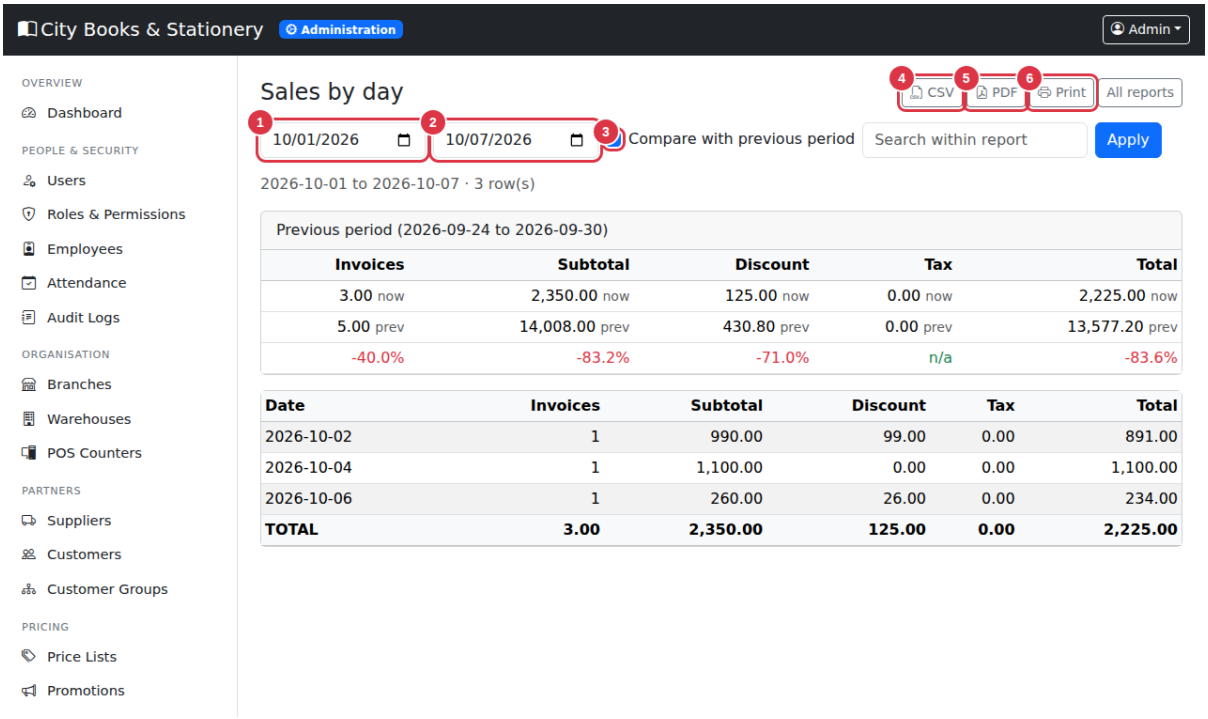

Figure 38. *A report. 1 = From date, 2 = To date, 3 = Compare with previous period, 4 = CSV (opens in Excel), 5 = PDF, 6 = Print.*

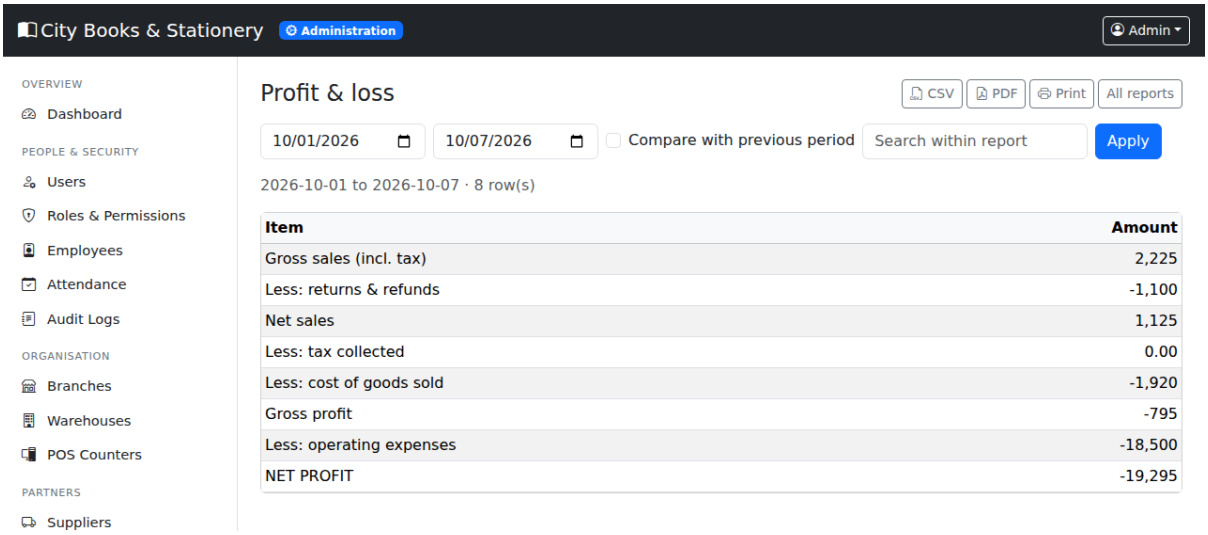

Figure 39. *The Profit & Loss report: sales, returns, tax, cost of goods, expenses and net profit.*

Report	What it tells you
Sales by day / product / cashier / payment method	How much you sold, what sells best, who sold it and how customers paid.
Returns & refunds, Voided transactions	Every return and cancelled sale, with the reason.

Report	What it tells you
Inventory valuation, Low & out of stock	The value of your stock and what to re-order.
Purchases, Supplier outstanding	What you bought and what you still owe.
Customer outstanding, Top customers	Who owes you money and who buys most.
Expenses, Profit & loss	Where money went and whether you made a profit.
Cash drawer variances	Differences found when cashiers closed their shifts.
Attendance, Employee sales	Staff attendance and sales by staff member.
Price change log	Who changed which price, and when.

TIP: **PDF** is best for printing and filing. **CSV** opens in Excel for extra calculations. The built-in PDF uses plain English letters only; if a report contains Sinhala names, use **Print** and choose "Save as PDF" in the print window, or use CSV.

Scheduled e-mail reports: at the bottom of the Reports page an administrator can ask the system to e-mail a report (as a CSV file) every day, week or month. This needs a one-time setup by your technical helper.

3.11 Settings and audit logs

Settings

Settings (System) holds shop-wide rules. Only change them if you are the owner or manager.

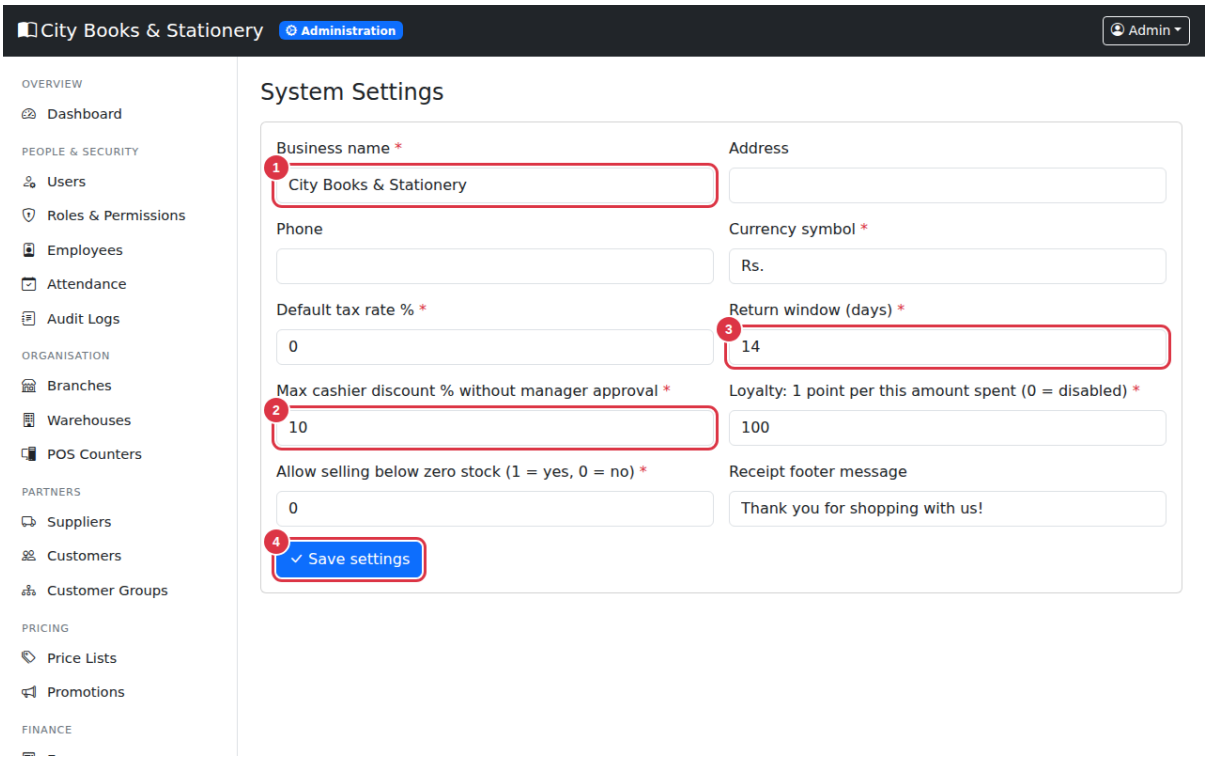

Figure 40. The settings page. 1 = Business name, 2 = Maximum cashier discount, 3 = Return window, 4 = Save settings.

Setting	What it controls
Business name, address, phone	Shown at the top of receipts and invoices.
Currency symbol	For example Rs.
Default tax rate %	Tax added to sales. 0 means no tax. A branch or product can have its own rate.
Return window (days)	How many days after the sale a customer may return an item without special manager approval.
Max cashier discount %	The largest manual discount a cashier can give without a manager's approval (default 10).
Loyalty points	1 point is given for each this-much spent (0 turns loyalty off).
Allow selling below zero stock	0 = the POS refuses to sell items that are not in stock; 1 = allows it.
Receipt footer message	Printed at the bottom of every receipt.

Audit logs - who did what

Audit Logs is a permanent diary of important actions: sign-ins, creating or changing records (with the old and new values), price changes, stock adjustments, voids, refunds, approvals, role and permission changes, and report downloads. Records cannot be edited or deleted.

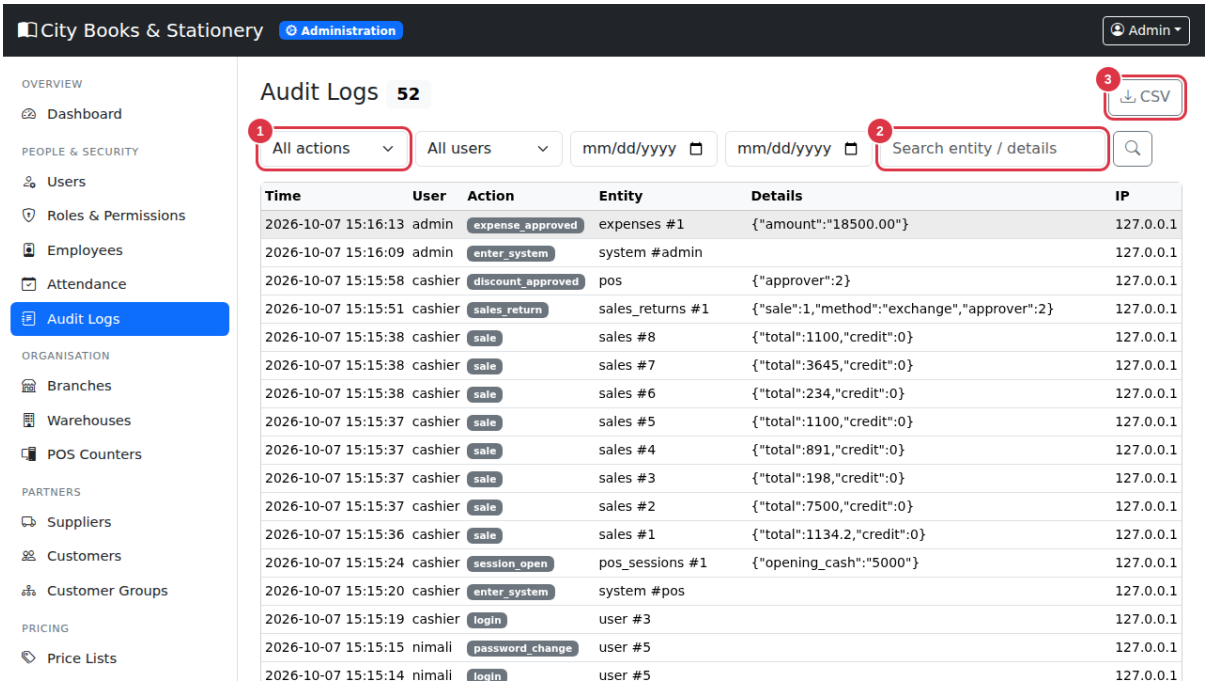

Figure 41. *The audit log. 1 = Filter by action, 2 = Search, 3 = CSV download.*

> **TIP:** If something looks wrong (for example a price changed), the audit log tells you who did it and when.

4. Point of Sale (POS) - selling at the counter

This chapter is for **cashiers** and anyone who sells to customers. Choose the **Point of Sale** tile after signing in.

4.1 A selling day at a glance

1. Sign in and choose the **Point of Sale** tile.
2. **Open the register** - choose your counter and type the cash you start with (Section 4.2).
3. Sell: scan or search items, choose a customer if needed, take payment and give the receipt (Sections 4.3 - 4.8).
4. Handle returns and special cases when they happen (Sections 4.9 - 4.10).
5. At the end of the shift, **count the cash** and **close the register** (Section 4.11).

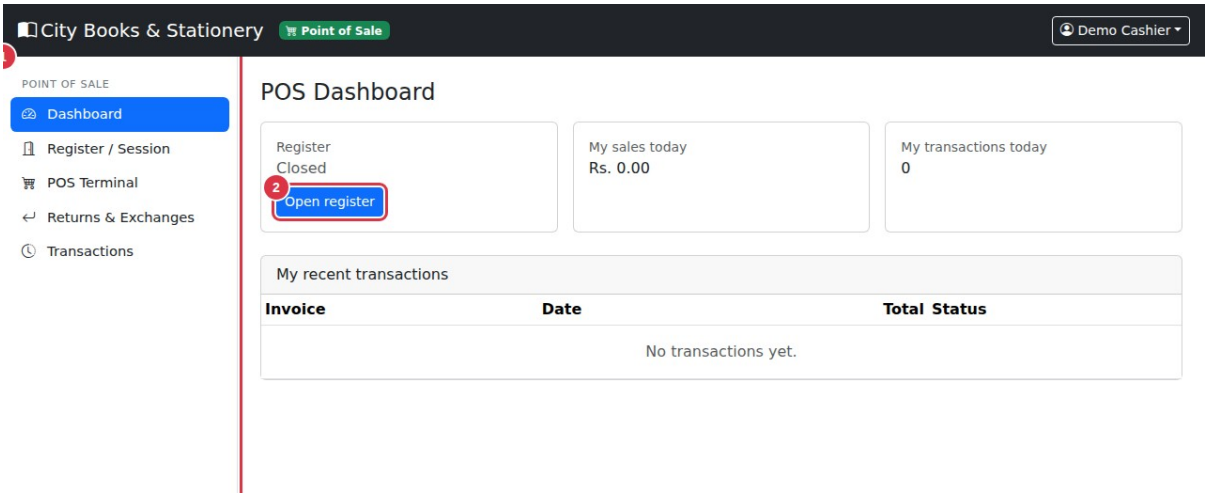

Figure 42. The POS dashboard. 1 = POS menu, 2 = Open register button (shown when no register is open).

The POS menu has: **Dashboard**, **Register / Session**, **POS Terminal**, **Returns & Exchanges** and **Transactions**. The dashboard shows whether your register is open, your sales today and your latest transactions.

4.2 Opening the register (starting your shift)

You cannot sell until you open the register. This tells the system which counter you are using and how much cash is in the drawer.

1. Click **Register / Session** in the menu.
2. In **Counter**, choose your counter (a counter already in use by someone else is greyed out).
3. In **Opening cash**, type the amount of cash (coins and notes) in the drawer when you start. Count it carefully.
4. Click **Start shift**. The POS terminal opens.

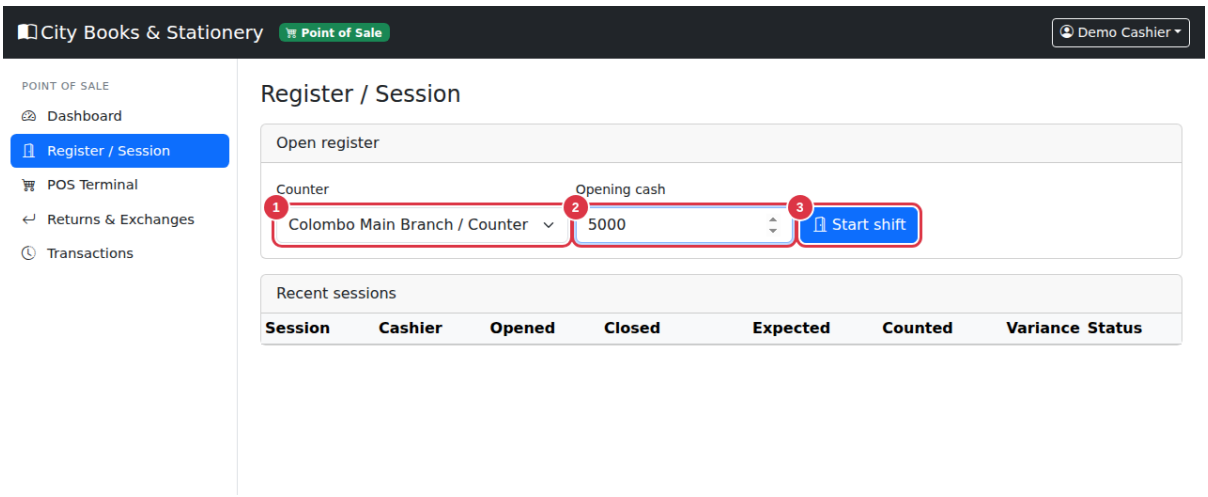

Figure 43. Opening the register. 1 = Counter, 2 = Opening cash, 3 = Start shift.

> **IMPORTANT:** The opening cash must be the real amount in the drawer. At closing time the system compares what it expects with what you count.

While a shift is open, the **Register / Session** page shows the number of sales, the sales value, the expected cash in the drawer and the totals by payment method. You can also **Suspend** (for example during a lunch break) and **Resume** your shift with the button on that page.

4.3 Getting to know the POS terminal

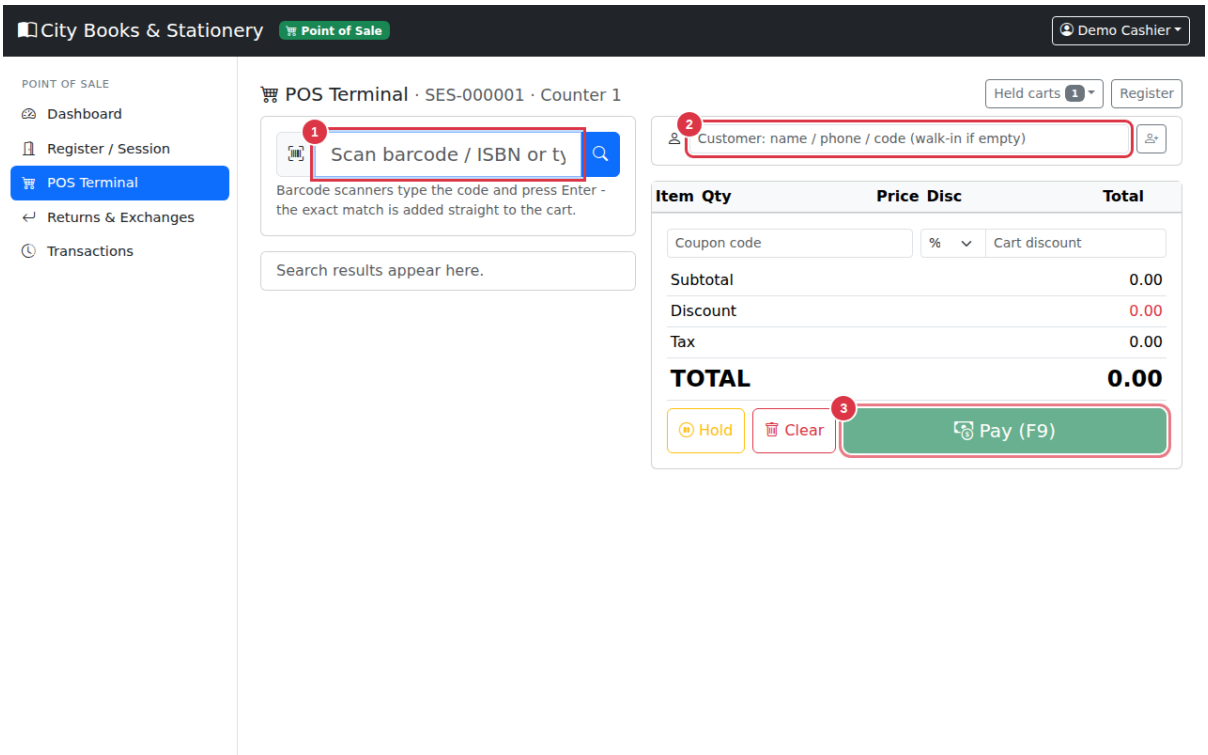

Figure 44. The POS terminal. 1 = Search / scan box, 2 = Customer box, 3 = Pay button.

- **Left side** - the **search box** (scan a barcode or type a name) and the **search results**.
- **Right side** - the **customer** box and the **cart** (the list of items being sold), with the totals and the buttons **Hold**, **Clear** and **Pay**.
- **Held carts** (top right) - sales you have put on hold (Section 4.7).

- Keyboard shortcuts: **F2** puts the cursor in the search box, **F9** opens the payment window.

4.4 Adding items to the sale

Using a barcode scanner (fastest)

Click in the search box (or press **F2**) and scan the barcode on the book or product. The item is added to the cart automatically. Scan again to add one more of the same item.

Searching by name, code or ISBN

1. Type part of the **name**, the **SKU**, or the **ISBN**, and press **Enter** (or click the blue magnifier).
2. The matching products appear below with their price and how many are in stock (green = in stock, red = none).
3. Click the product to add it to the cart.

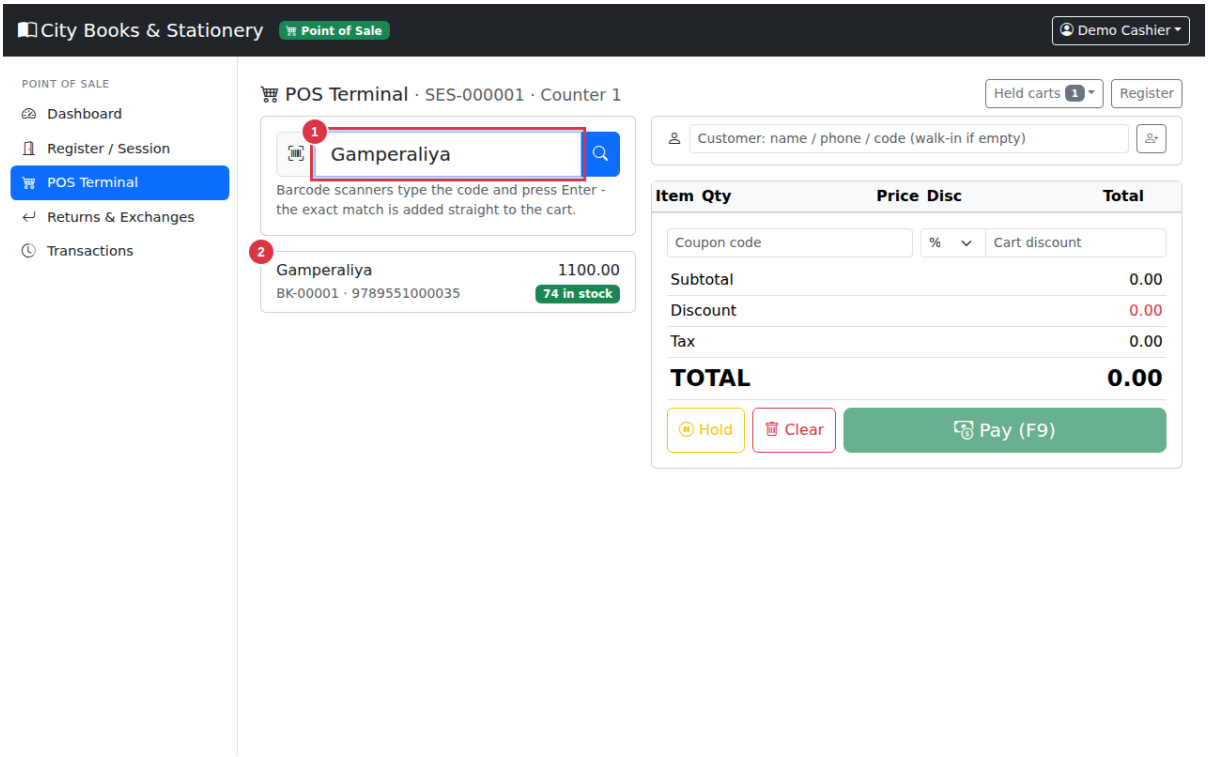

Figure 45. Searching. 1 = Search box, 2 = A matching product - click it to add it.

Changing quantity or removing an item

- Click **+** or **-** next to the item, or type a number in the quantity box.
- Click the red **x** at the end of the line to remove the item.
- The **Clear** button empties the whole cart.

> **NOTE:** The price is taken from the system automatically (retail, wholesale or member price depending on the customer, and any promotion). Cashiers normally cannot change prices. If your role has the "Change price" permission, the price box is editable.

4.5 Choosing a customer

For a normal walk-in sale you can leave the customer empty. Choose a customer when: they are a member or wholesale customer (special price), you want to give loyalty points, or they will pay later (credit).

1. Click the **Customer** box and type at least 2 letters of the **name**, **phone number** or **code**.
2. Click the right customer in the list that appears.
3. The line under the box shows the customer's **group**, **loyalty points**, **amount owing** and **credit limit**. Prices and discounts update automatically.

To add a **new customer** quickly, click the small **person+** button next to the customer box, type the name and phone. (This needs permission to create customers.) To remove the customer, clear the box.

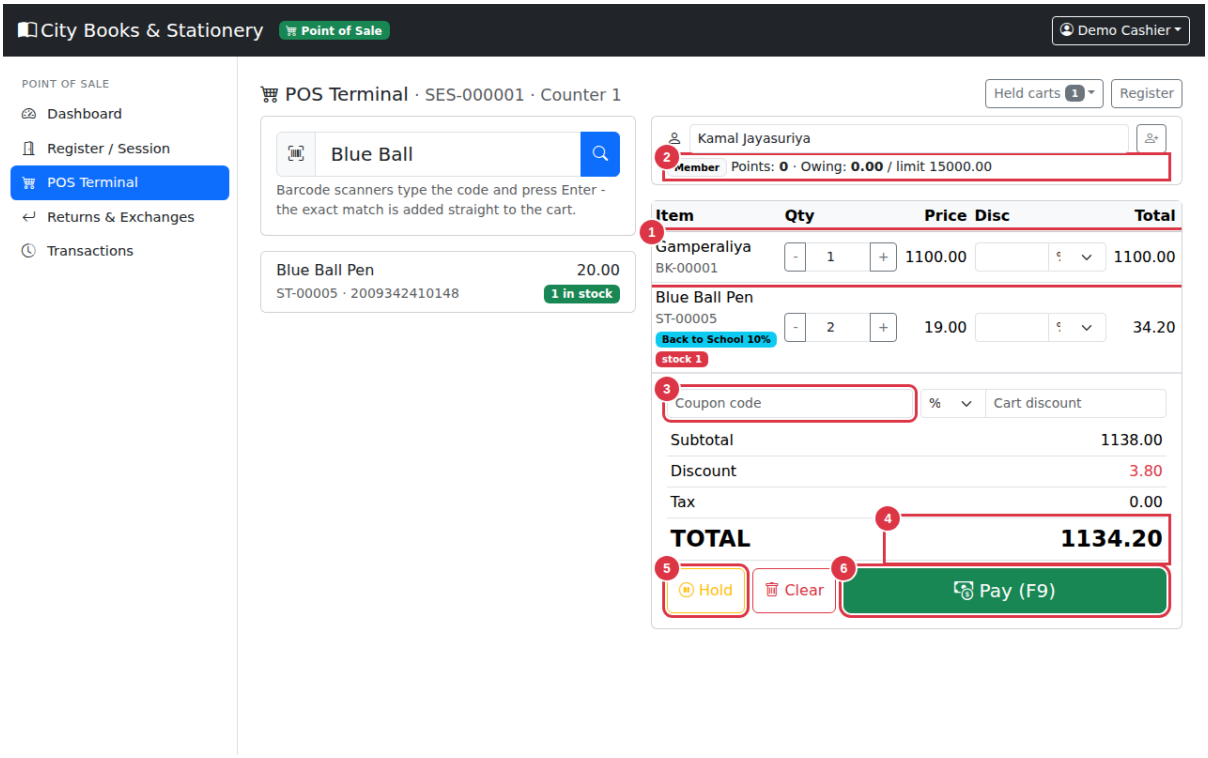

Figure 46. A sale in progress. 1 = A cart item (with quantity buttons), 2 = Customer details, 3 = Coupon code, 4 = Total, 5 = Hold, 6 = Pay. The blue label "Back to School 10%" is a promotion applied automatically.

4.6 Discounts and coupons

- **Promotions** (set up by the manager) are applied automatically - you do not do anything.
- **Coupon** - if the customer has a coupon code, type it in the **Coupon code** box. If the code is not valid for the items in the cart, you see a message.
- **Manual discount** - if your role allows it, type a number in the **Disc** box of an item and choose **%** (percent) or **Amt** (an amount). You can also give a discount on the whole cart using **Cart discount**.

When a manager must approve the discount

Every shop has a limit for what a cashier may discount on their own (default **10%**). If you give a bigger discount, an amber message appears and the **Pay** button stays grey until a manager approves.

1. Click the yellow **Approve** button in the message.

2. Ask the **manager** to type **their own username and password** in the window. (Do not type it for them and never ask for their password.)
3. Click **Approve**. The message disappears and you can continue to **Pay**.

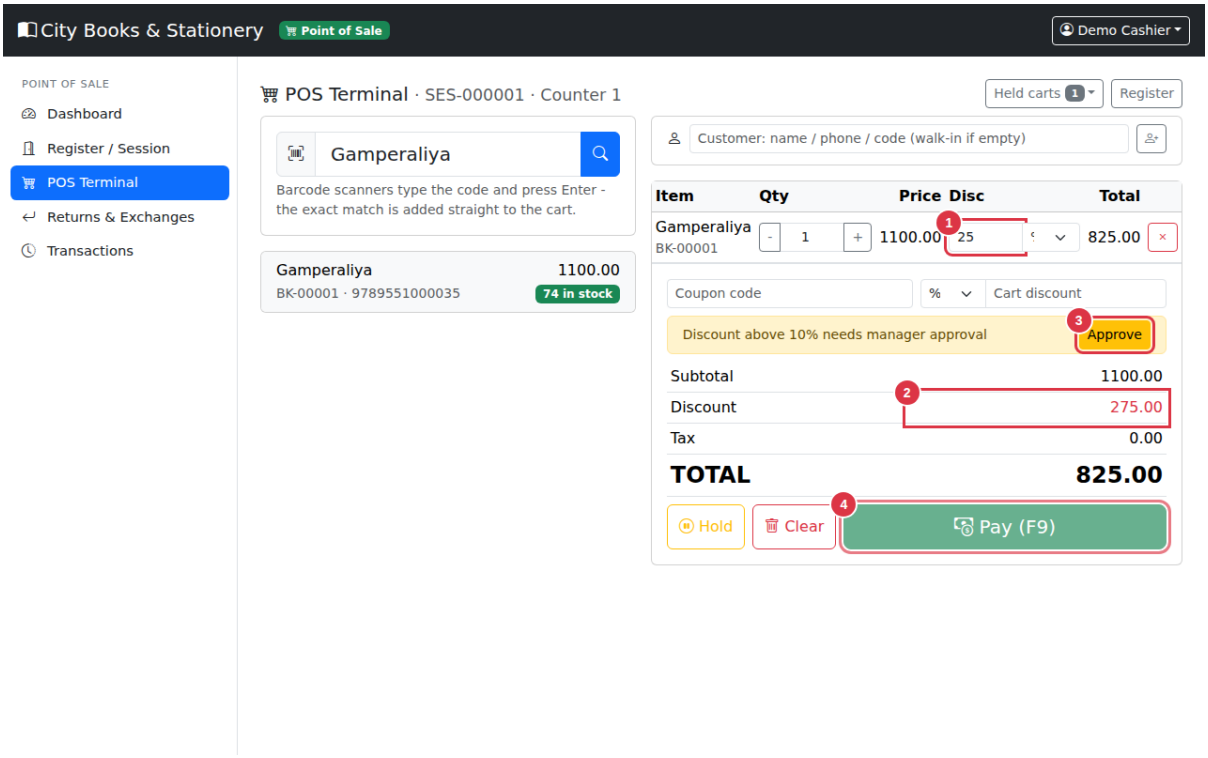

Figure 47. *A 25% discount is above the cashier limit. 1 = Discount box, 2 = Discount amount, 3 = Approve button, 4 = Pay (grey until approved).*

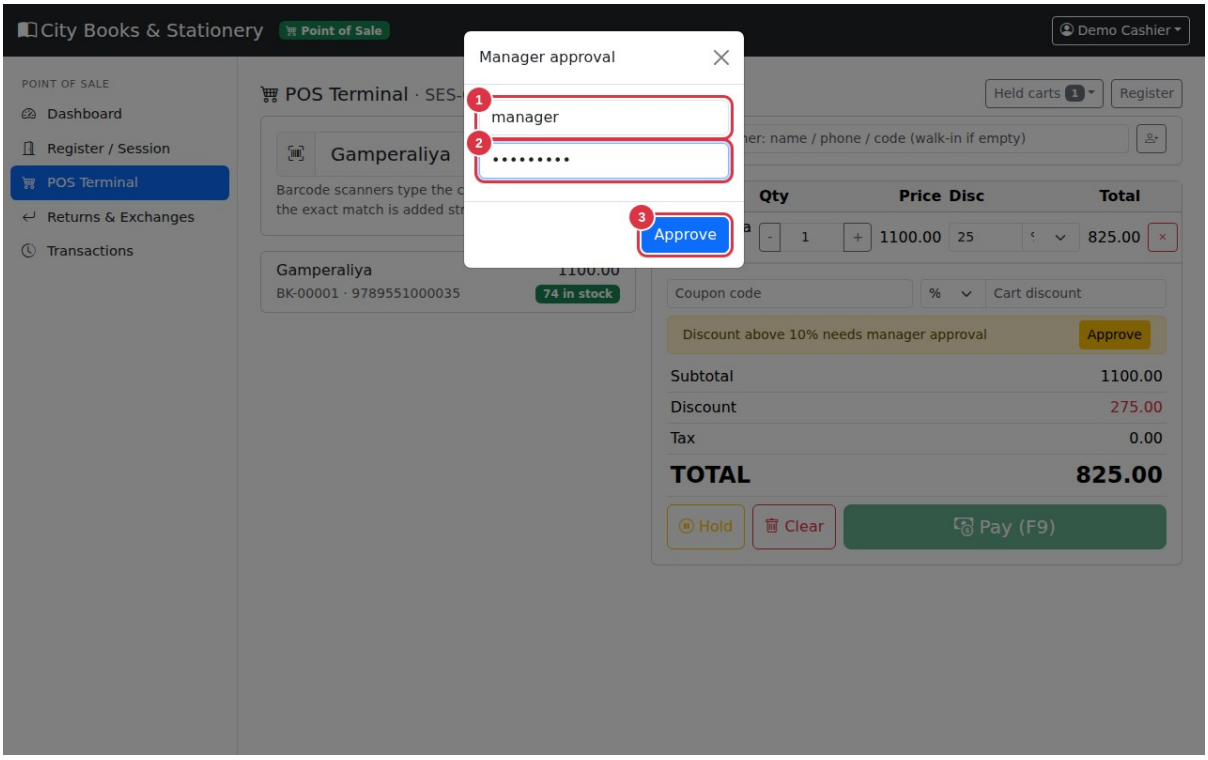

Figure 48. *The manager approval window. 1 = Manager username, 2 = Manager password, 3 = Approve.*

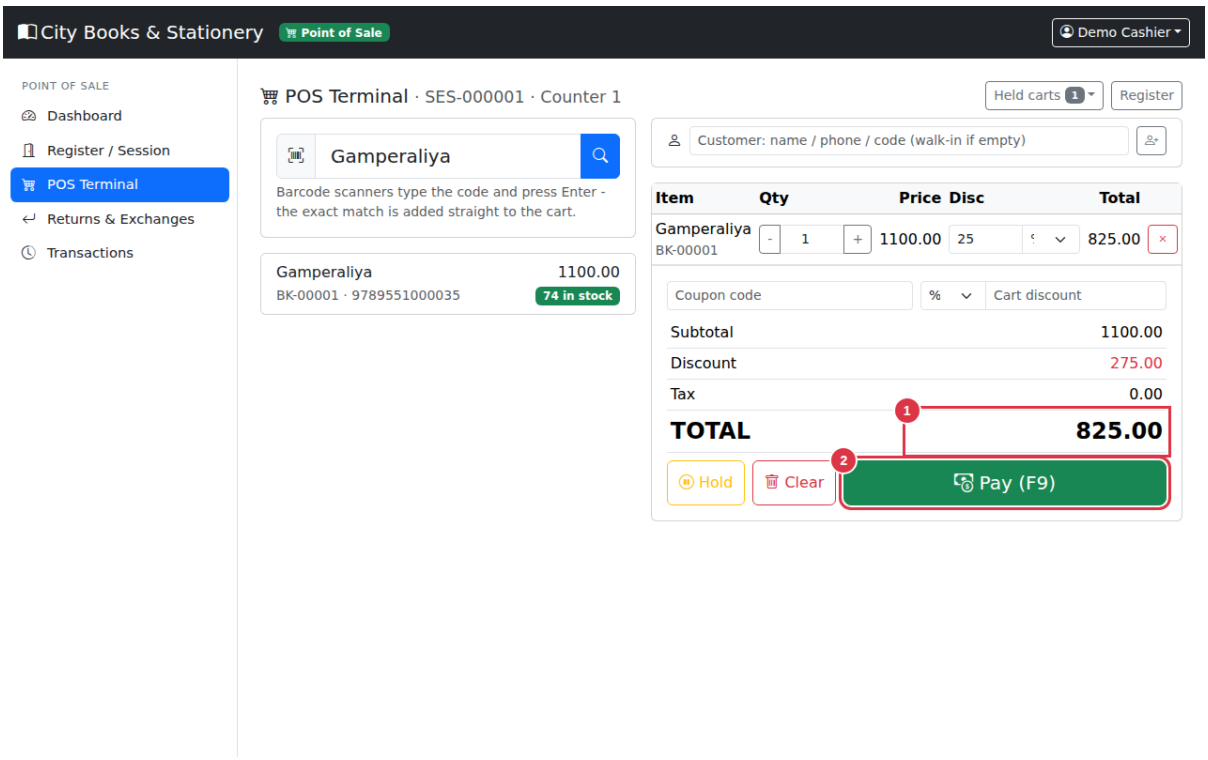

Figure 49. *After approval the Pay button turns green. 1 = Total, 2 = Pay.*

> **NOTE:** An approval is valid for about 10 minutes for your sale. Every approval is recorded with the manager's name.

4.7 Holding a sale and resuming it later

If a customer must go and fetch something, or you need to serve someone else quickly, you can **hold** the sale.

1. With the items in the cart, click **Hold**.
2. Type a short label (for example "Customer waiting") and click OK. The cart is saved and cleared.
3. To continue later, click **Held carts** (top right) and click the saved cart. It comes back with all items.
4. To throw a held cart away, click the small red **x** beside it.

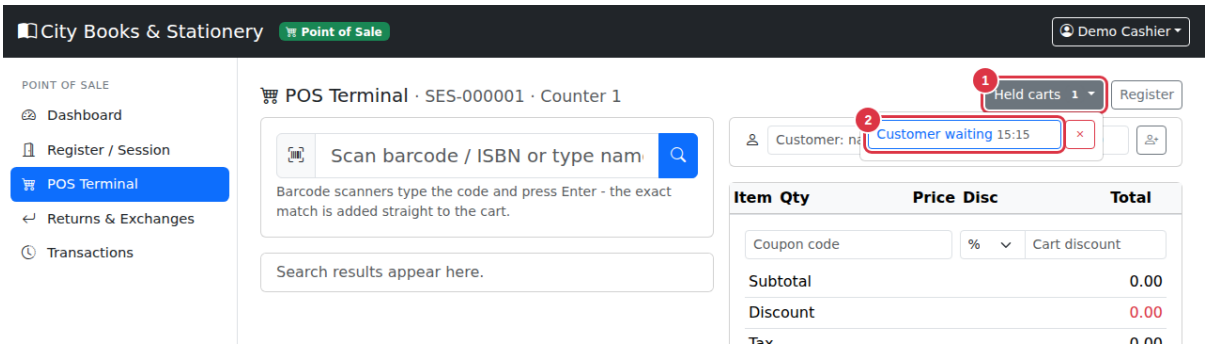

Figure 50. *The Held carts list. 1 = Held carts button, 2 = A held cart - click to resume.*

> **IMPORTANT:** You cannot close the register while you still have held carts. Resume or discard them first.

4.8 Taking payment and giving the receipt

1. Check the **TOTAL** is correct, then click the green **Pay (F9)** button. The payment window opens with **Cash** already filled in for the full amount.
2. Type the **amount the customer gave** in the cash box. The window shows the **Change** you must give back.
3. Click **Confirm payment**.
4. The **receipt** opens in a new tab and the print window appears. Click **Print**, tear off the receipt and give it to the customer. Then close the receipt tab.
5. The cart is empty and ready for the next customer.

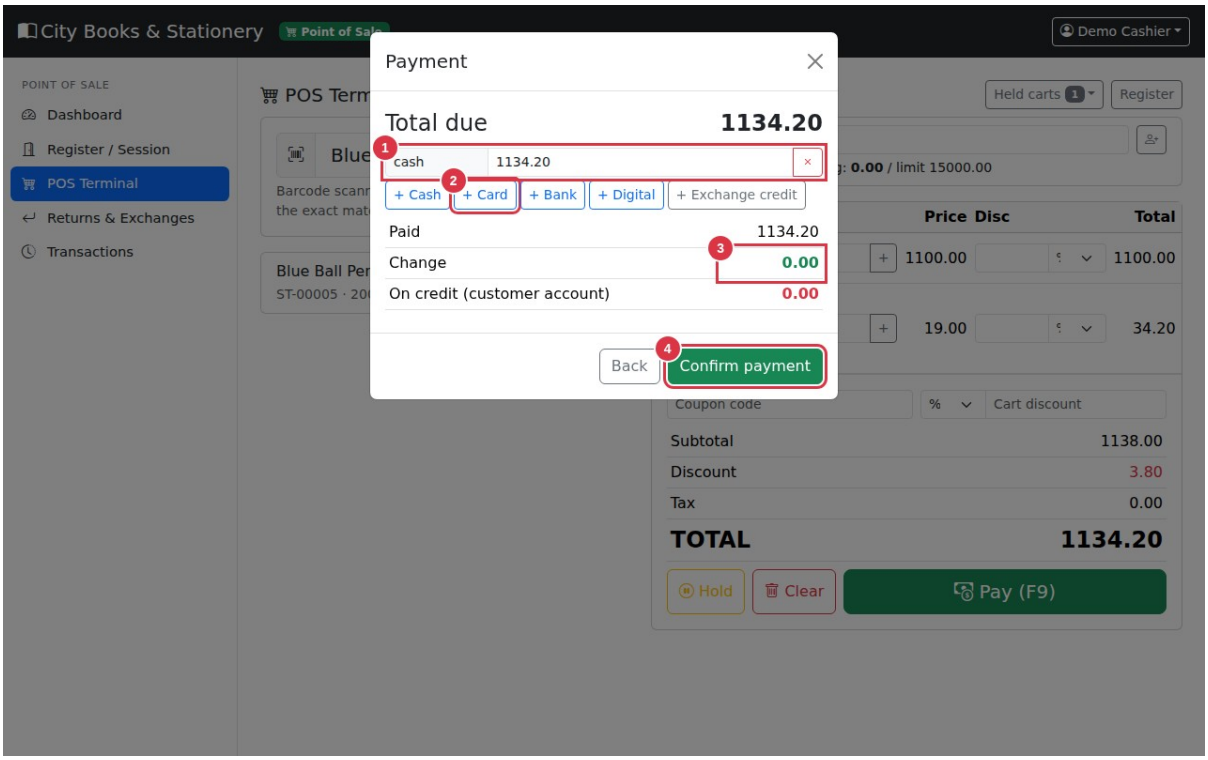

Figure 51. *The payment window. 1 = Payment lines, 2 = Add a card payment, 3 = Change, 4 = Confirm payment.*

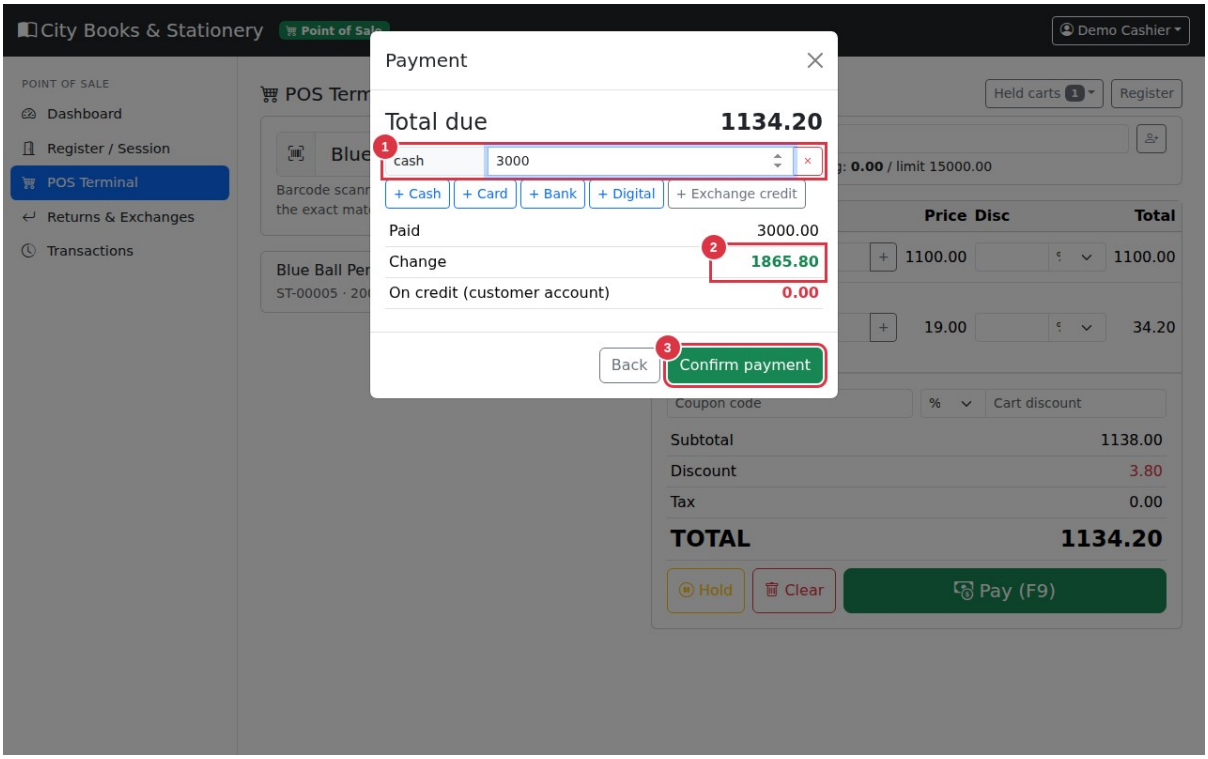

Figure 52. *The customer gives Rs. 3,000 cash: the window shows the change to give back. 1 = Cash received, 2 = Change, 3 = Confirm payment.*

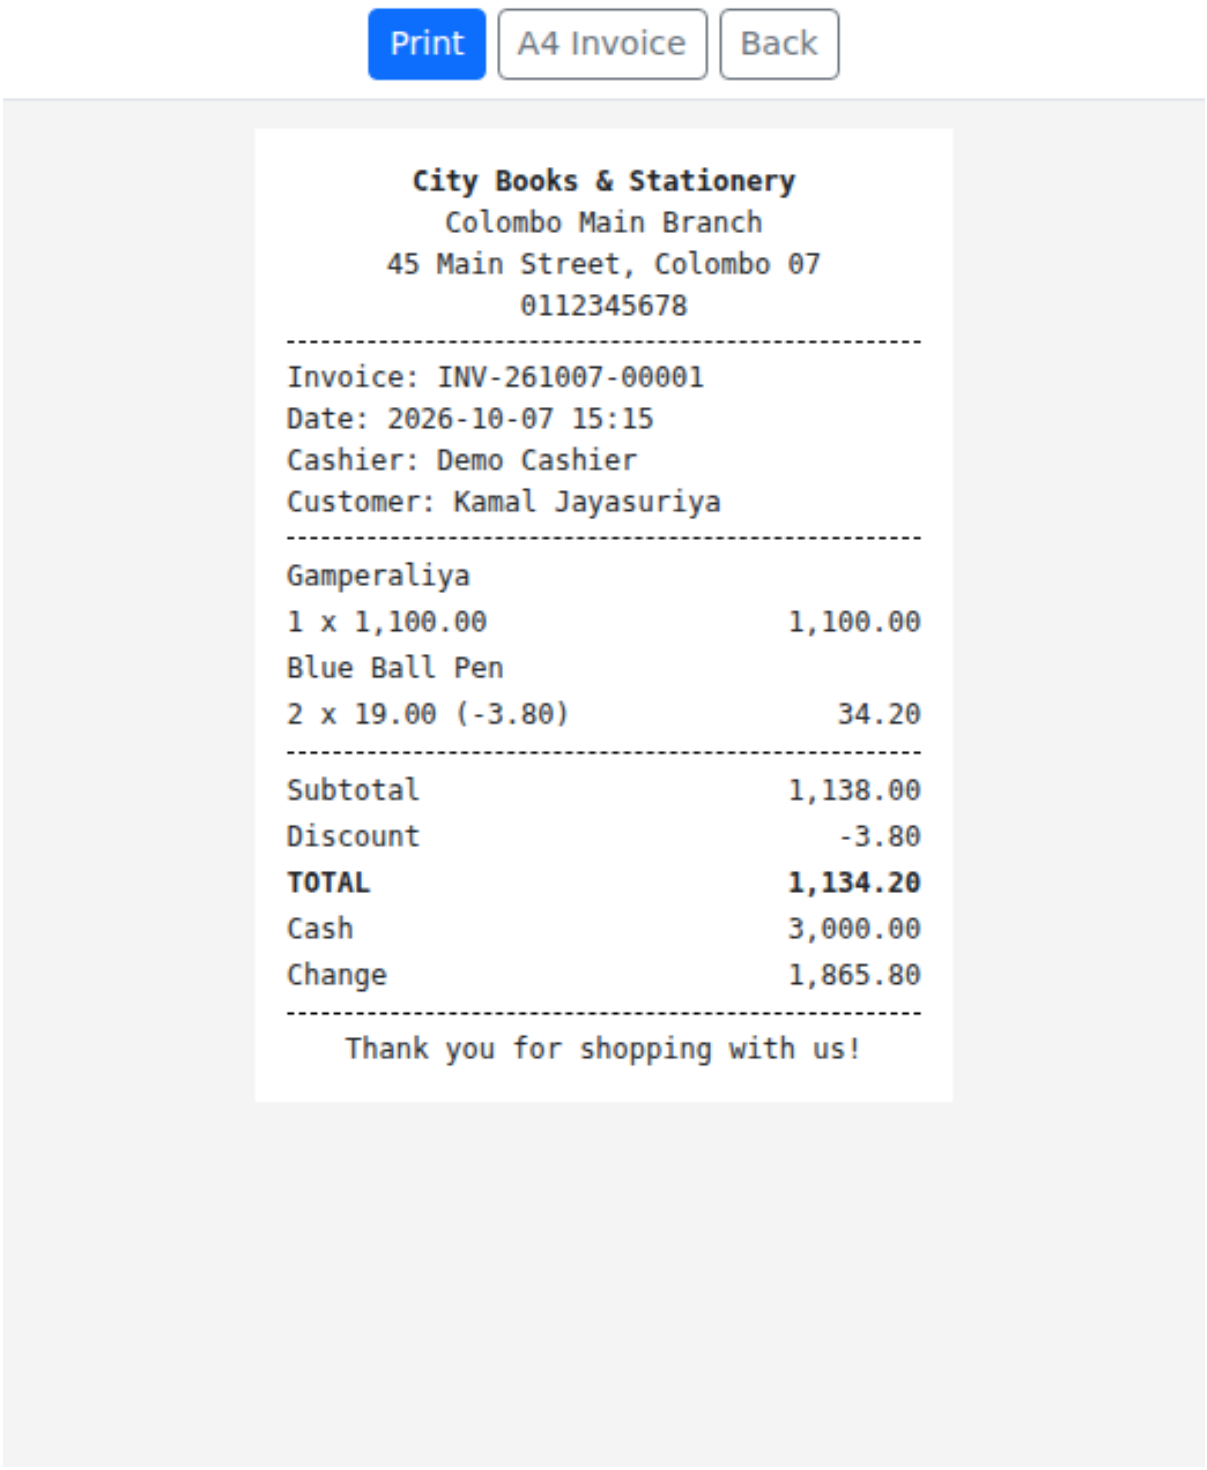

Figure 53. A printed receipt (80 mm). It shows the shop, invoice number, items, discount, total, payments and change.

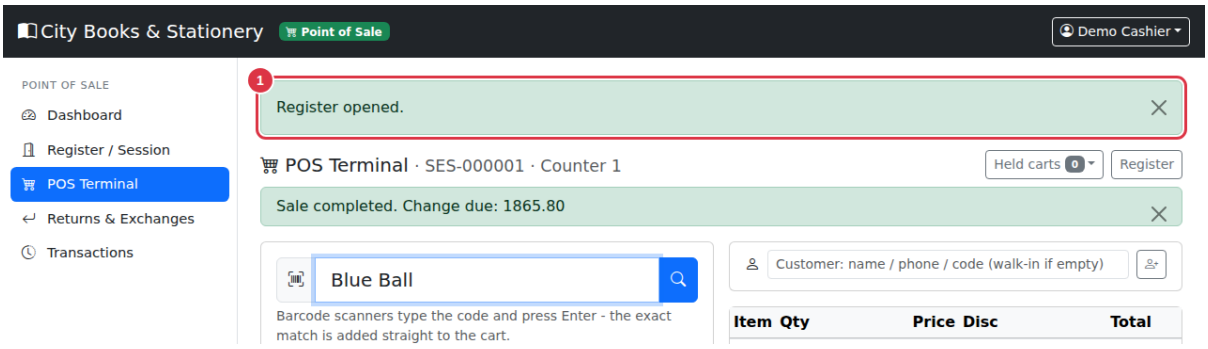

Figure 54. After the sale the cart is cleared and a green message is shown.

Paying by card, bank transfer or digital payment

Click **+ Card**, **+ Bank** or **+ Digital** in the payment window. Type the amount and (optional) a reference such as the last digits of the card slip. The reference helps when checking the statement later.

Splitting a payment (part cash, part card)

Add more than one payment line. For example, customer pays Rs. 1,000 by card and the rest in cash: change the cash line to the remaining amount and add a **+ Card** line for Rs. 1,000. The total of all lines must cover the bill. Card and other non-cash payments can never be more than the bill.

Selling on credit (pay later)

Some customers are allowed to pay later. To sell on credit:

1. Choose the **customer** before paying (Section 4.5). The customer must have a credit limit and your role must be allowed to sell on credit.
2. In the payment window, enter only the amount the customer pays now (it can be 0).
3. The window shows the rest as **On credit (customer account)**. Click **Confirm payment**.

> **IMPORTANT:** The system refuses a credit sale if there is no customer, if the customer has no credit limit, or if the customer would go over the credit limit.

Paying with an exchange credit note

When a customer exchanged an item (Section 4.10) they receive a **credit note number** such as RET-000001. In the payment window click **+ Exchange credit**, type the number in the reference box and the amount. If the credit is more than the new bill, the balance stays on the note for next time.

If something goes wrong when paying

- A red message in the payment window tells you the reason (for example "Insufficient stock" or "Credit limit exceeded"). Fix it and press **Confirm payment** again.
- If the network or computer stops while paying, do **not** sell again immediately. Open **Transactions** (Section 4.9) and check whether the sale was saved. The system prevents the same sale from being saved twice.

4.9 Finding past sales, reprinting, e-mailing and cancelling (void)

Click **Transactions** in the POS menu. Cashiers see their own sales; managers can see everyone's.

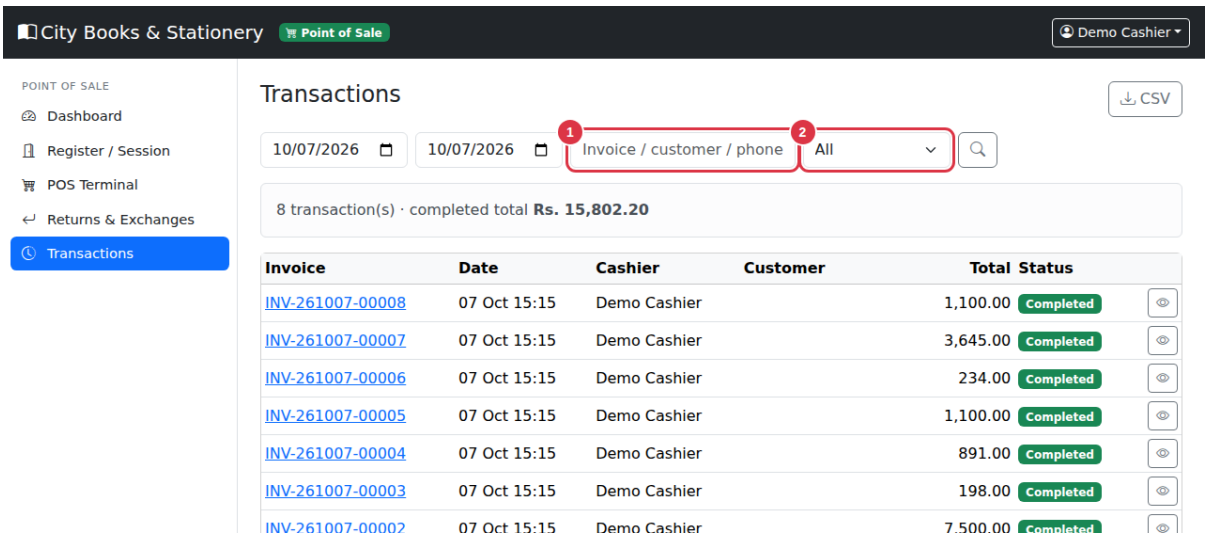

Figure 55. The Transactions list. 1 = Search by invoice, customer or phone, 2 = Status filter, 3 = An invoice (click to open).

1. Choose the **dates**, or type an invoice number, customer name or phone, and click the magnifier.
2. Click the invoice number to open the sale.

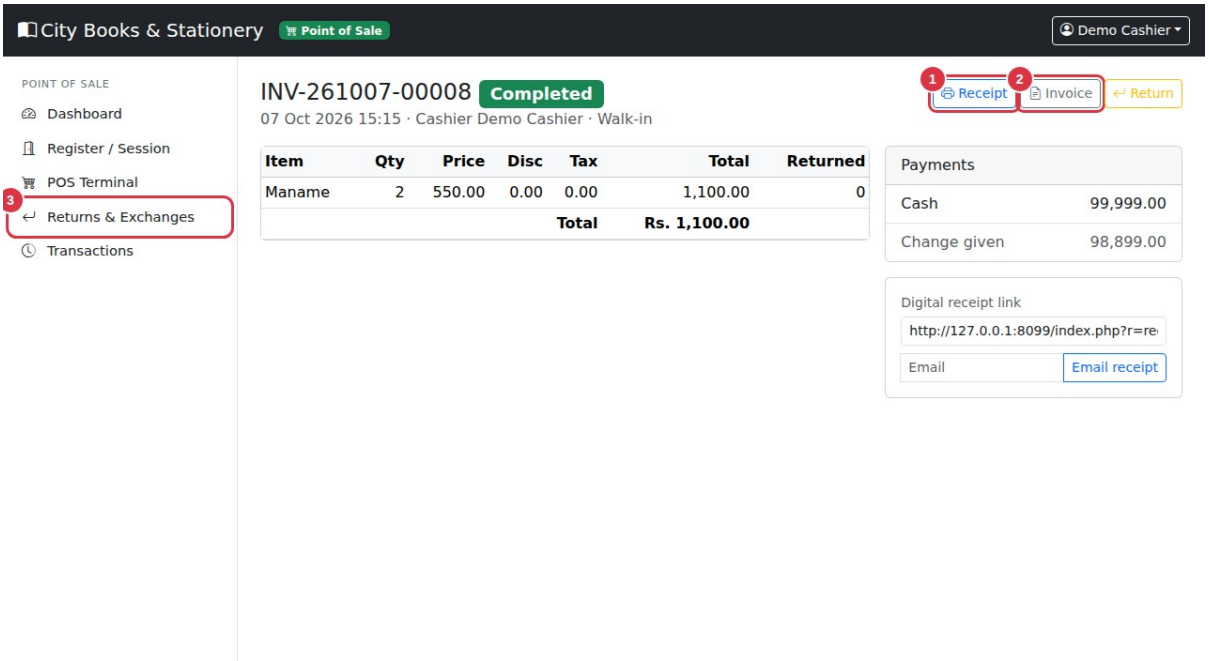

Figure 56. A sale's details. 1 = Reprint receipt, 2 = A4 invoice, 3 = Return items.

- **Receipt** - prints the small receipt again (needs the reprint permission).
- **Invoice** - opens an A4 invoice you can print or save as PDF, for business customers.
- **Digital receipt link** - a web link you can send by phone message so the customer can see the receipt. **Email receipt** sends it to an email address (the shop's email must be set up).
- **Return** - starts a return (Section 4.10).

Voiding (cancelling) a sale

If a sale was made by mistake, a user with the **Void** permission can cancel it from the sale's page.

1. Open the sale from **Transactions**.

2. In the red **Void invoice** box, type the **reason**.
3. Click **Void invoice** and confirm. The stock goes back, the payments are reversed and the sale shows **Void**.

> **IMPORTANT:** A void cannot be undone. A sale that already has a return cannot be voided. Voids are listed in the Voided transactions report and the audit log.

4.10 Returns and exchanges

When a customer brings an item back, use **Returns & Exchanges**. You need the original invoice (the customer usually has the receipt, otherwise search by their name or phone).

1. Click **Returns & Exchanges** in the menu.
2. Type the **invoice number** (or customer name / phone) and click **Find invoice**.
3. Click **Return / exchange** beside the correct invoice.

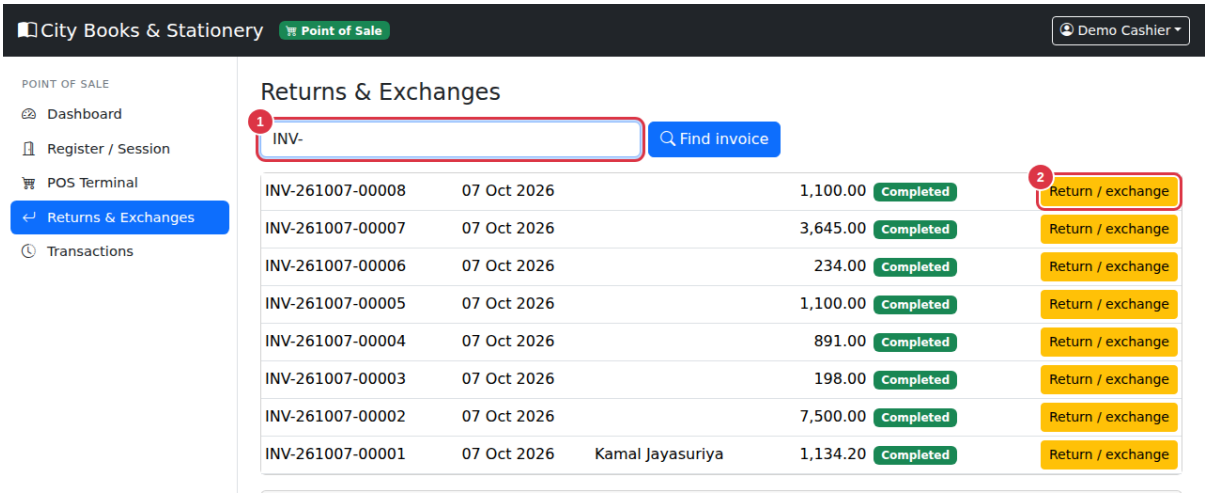

Figure 57. *Finding the invoice. 1 = Search box, 2 = Return / exchange button.*

1. In **Return qty**, type how many of each item come back. (You cannot return more than was sold, or items already returned.)
2. Choose the **Condition**: **Good (restock)** puts the item back into stock; **Damaged** does not.
3. Type the **Reason**.
4. Choose **Refund as**: **Cash refund**, **Card refund**, **Credit to customer account**, or **Exchange credit note** (the customer will choose other items - use this for exchanges).
5. If you are not allowed to approve returns, ask a **manager** to type their username and password in the **Manager approval** boxes.
6. Click **Process return**.

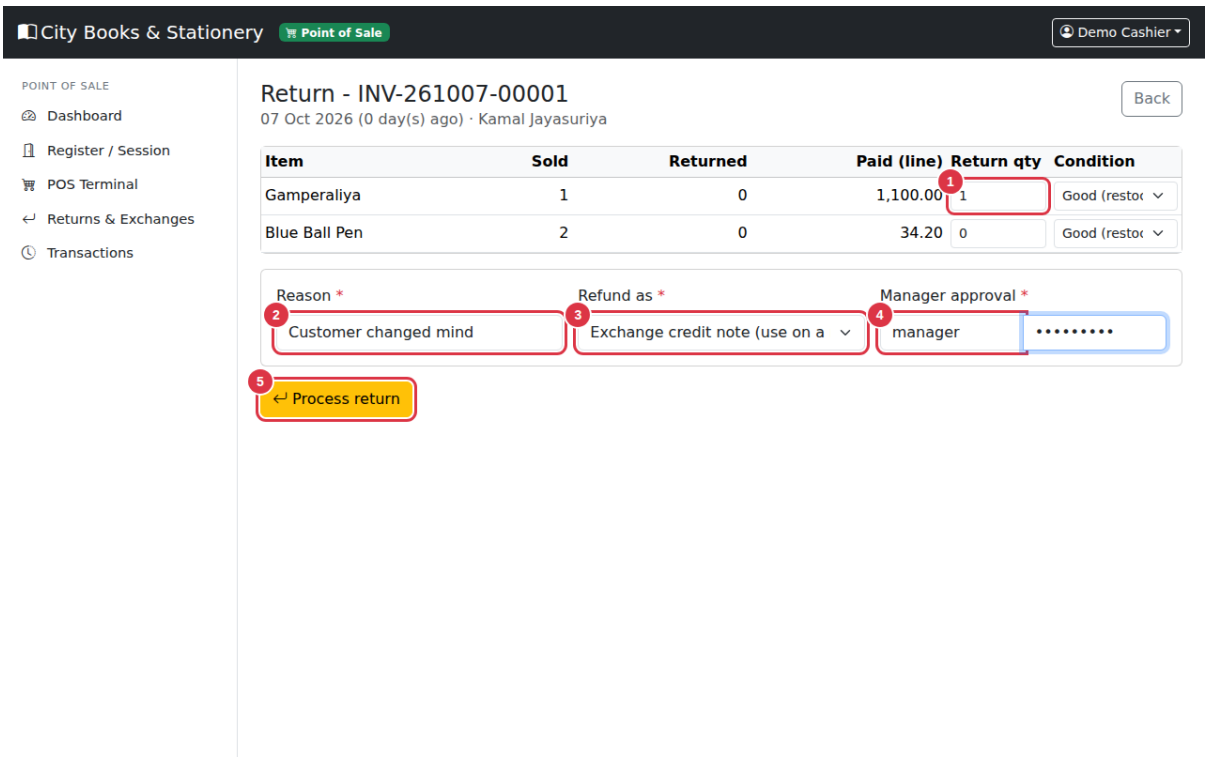

Figure 58. The return form. 1 = Quantity to return, 2 = Reason, 3 = Refund as, 4 = Manager approval, 5 = Process return.

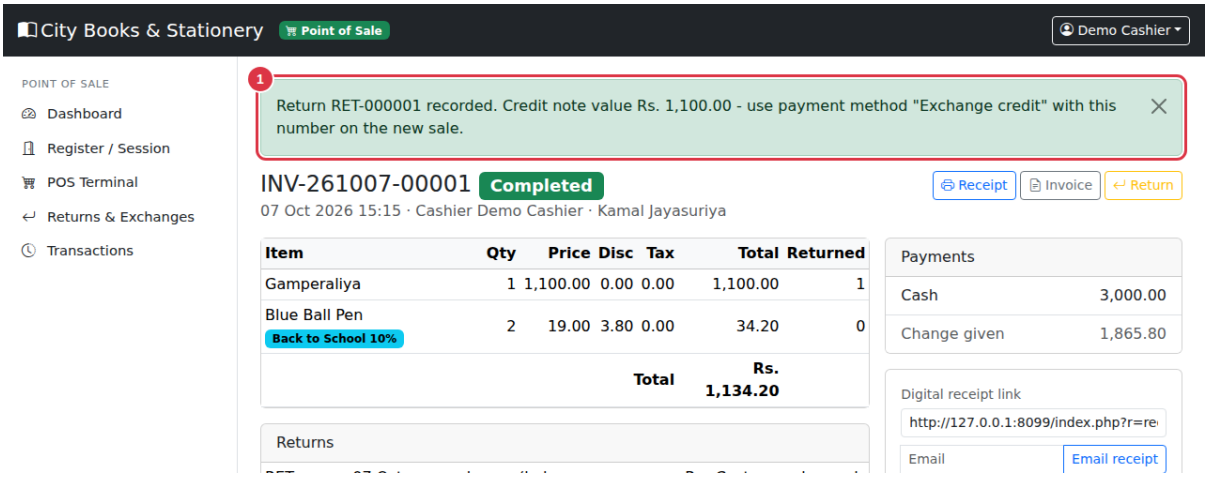

Figure 59. After a return: the system shows the return number and the refund. For an exchange credit note, the customer uses that number at the new sale (Section 4.8).

> **IMPORTANT:** Check the return window (default 14 days). Outside the window a manager must approve. Always inspect the item before refunding money.

> **NOTE:** How an exchange works: process a return with **Exchange credit note**. Then make a normal new sale for the new item(s) and pay with **+ Exchange credit**, adding cash or card if the new items cost more.

4.11 Closing the register (ending your shift)

1. Make sure there are no held carts.
2. Click **Register / Session** in the menu.
3. Count all the cash in the drawer (notes and coins) carefully.

4. Type the amount in **Counted cash in drawer**. You may add a note.
5. Click **Close register** and confirm.

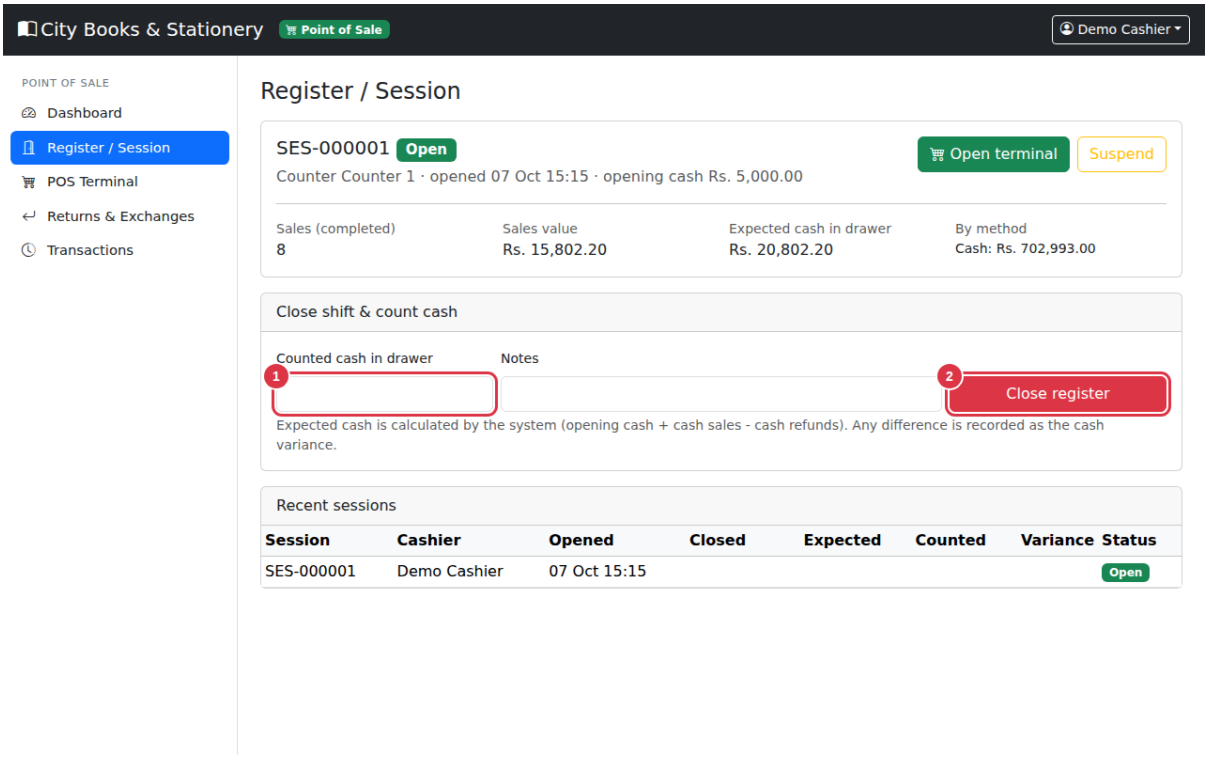

Figure 60. *Closing the register. 1 = Counted cash, 2 = Close register.*

The system works out the **expected cash** (opening cash + cash sales - cash refunds) and shows the **variance** (counted minus expected). A manager checks it later in **Cash Drawer** (Section 3.9).

> **IMPORTANT:** Count honestly. A difference is recorded against your shift. If you find a mistake, tell your manager - do not try to hide it.

> **TIP:** After closing, sign out (top right, your name > Sign out).

5. Product & Inventory - books, stationery and stock

This chapter is for **store keepers**, **managers** and anyone who adds products, receives goods or counts stock. Choose the **Product & Inventory** tile.

5.1 The Inventory dashboard

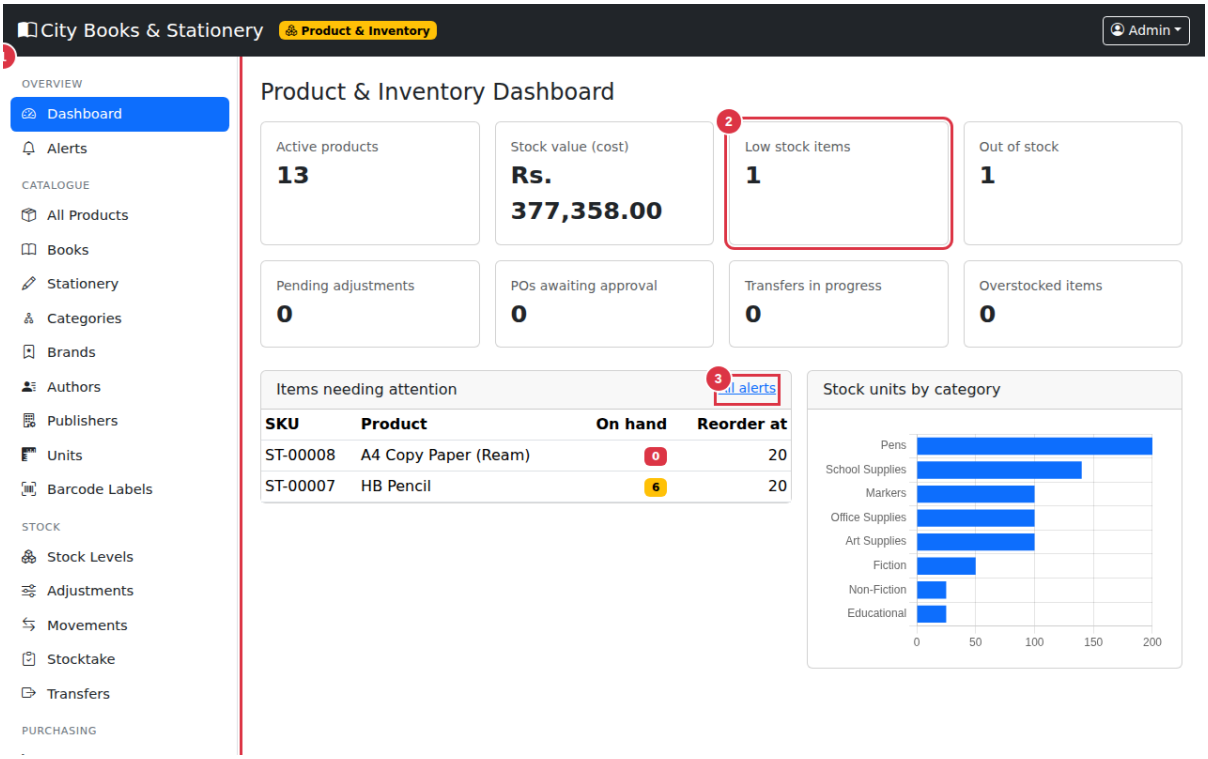

Figure 61. *The inventory dashboard. 1 = Menu, 2 = Low stock count, 3 = All alerts.*

- **Active products**, **Stock value** (at cost), **Low stock items**, **Out of stock**.
- **Pending adjustments**, **POs awaiting approval** and **Transfers in progress** - jobs waiting for someone.
- A list of the items that need attention and a chart of stock by category.

5.2 Adding and editing products

Products are kept in three lists: **All Products**, **Books** and **Stationery**. A book has extra details (ISBN, author, publisher…). Stationery has brand, size, colour and pack quantity. Use the list that matches the product.

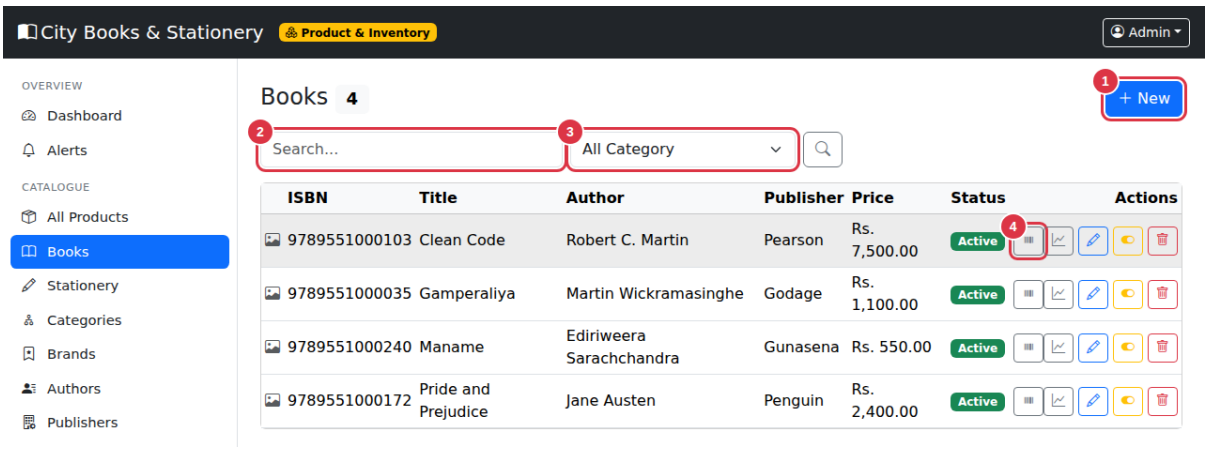

Figure 62. The Books list. 1 = New, 2 = Search (title, ISBN, author), 3 = Category filter, 4 = Barcode icon.

Add a book

1. Click **Books** in the menu, then **New**.
2. Type the **ISBN** (10 or 13 digits). The system checks that the number is a real ISBN - if you mistype it you will see an error.
3. Type the **Title**, choose the **Author** and **Publisher** (add new ones first under Authors / Publishers if they are not in the list), and fill in edition, language, genre and year.
4. Choose the **Category** (for example Fiction) and **Unit** (Piece).
5. Type the prices: **Cost price** (what you pay), **Selling price** (what the customer pays). Wholesale and member prices are optional.
6. Type the **Reorder level** - when stock falls to this number the system warns you to order more. **Minimum stock** and **Maximum stock** are optional.
7. The **Barcode** box can be left empty - for books the ISBN is used (see Section 5.3). You may also add a picture.
8. Click **Save**.

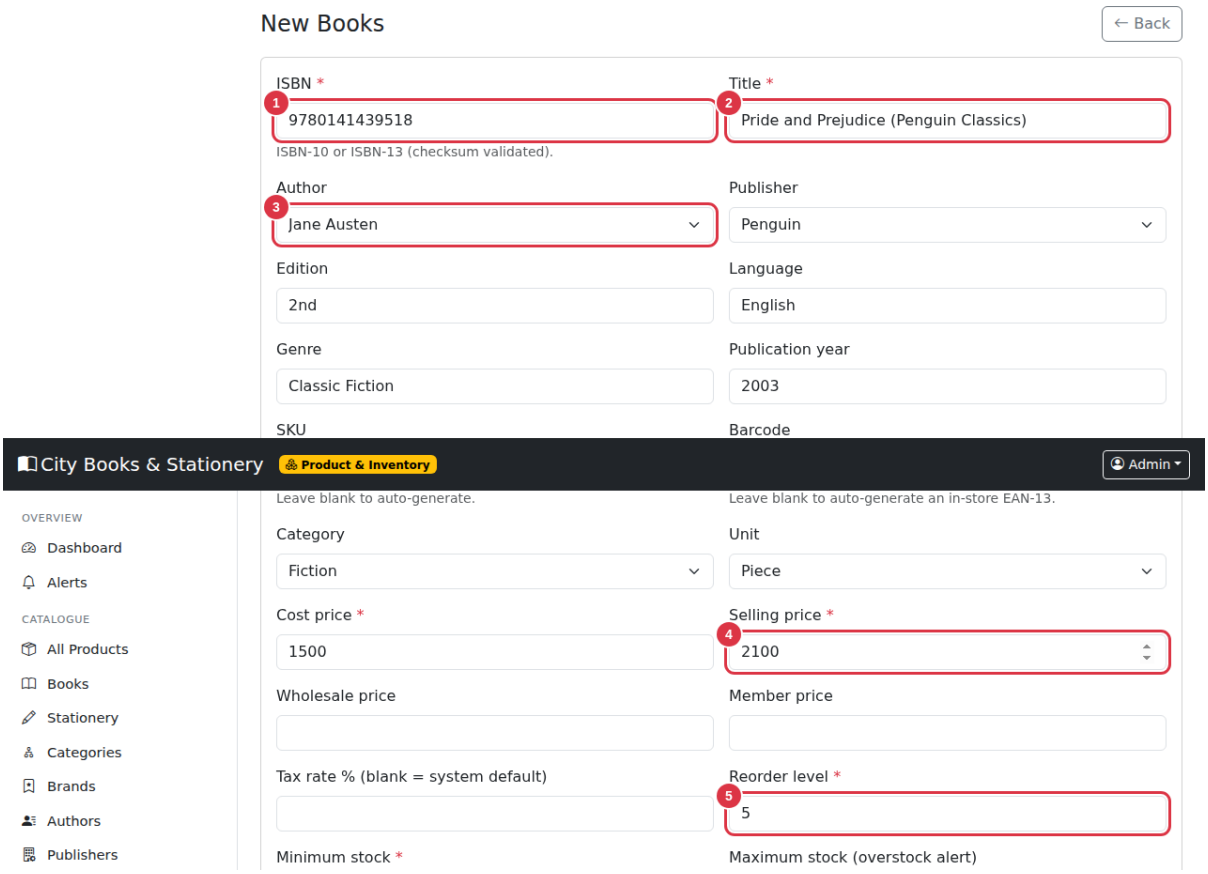

Figure 63. *The top of the book form. 1 = ISBN, 2 = Title, 3 = Author, 4 = Selling price, 5 = Reorder level.*

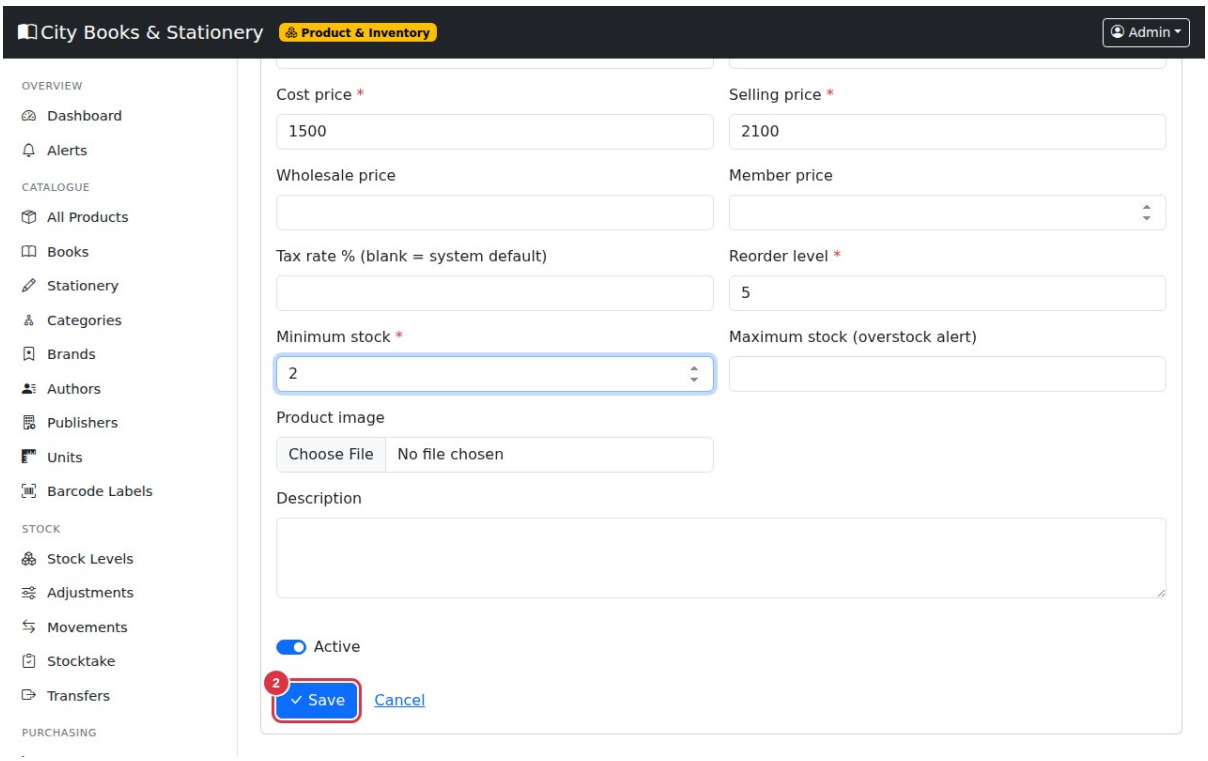

Figure 64. *The bottom of the form. 1 = Generate barcode button, 2 = Save.*

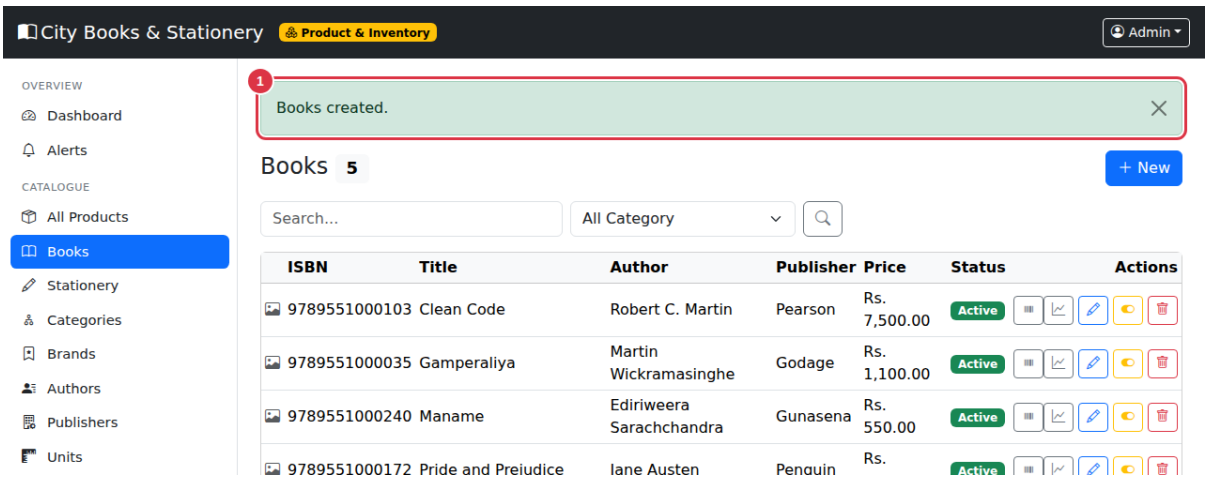

Figure 65. The new book appears in the list with a green confirmation.

Add stationery

1. Click **Stationery**, then **New**.
2. Type the **Product name** (for example "Gel Pen Blue 0.5mm"), choose the **Brand**, and type size, colour and pack quantity.
3. If this is a colour or size version of another product, choose the main product in **Variant of**.
4. Choose **Category** and **Unit**, and fill in the prices and reorder level.
5. Click **Save**.

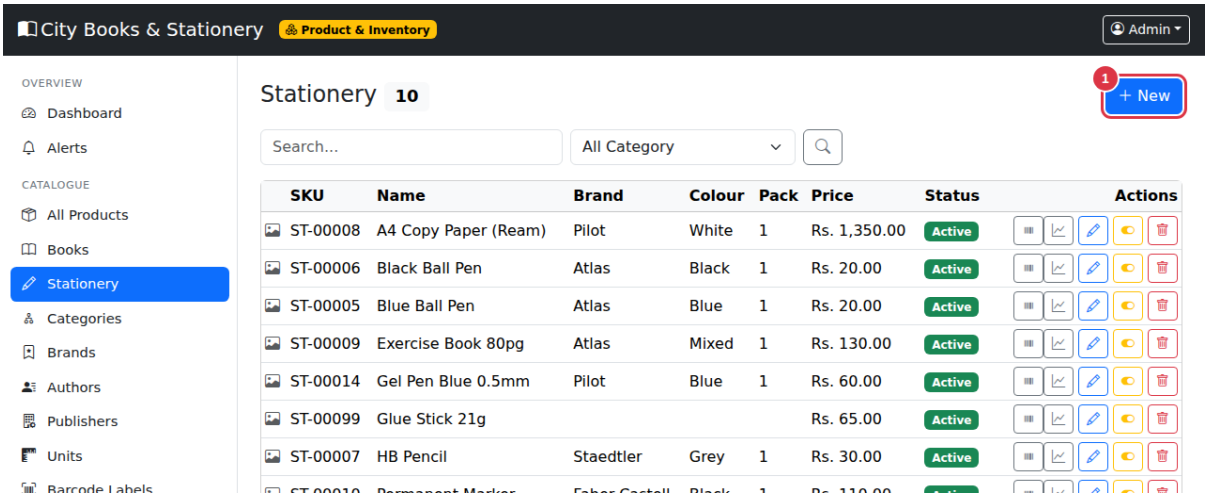

Figure 66. The Stationery list.

Edit, deactivate or archive a product

- **Pencil** - change details. Changing a price is recorded in the price history and the audit log.
- **Toggle** - make a product inactive. It disappears from the POS but stays in your records.
- **Bin (archive)** - hides a product you no longer sell. Its history (past sales) is kept.
- **Price history** icon - shows every price change, who changed it and when.

> **IMPORTANT:** Do not change the selling price carelessly - it changes what the POS charges immediately.

The other lists under **Catalogue** work the same way: **Categories** (with sub-categories, for example Books > Fiction), **Brands**, **Authors**, **Publishers** and **Units**. Add new entries there before using them in a product.

5.3 Barcodes - generating and printing labels

Every product sold at the POS needs a barcode so it can be scanned. Books already have one: the **ISBN** printed on the back. Stationery and other items usually do not, so the system can **generate** an in-store barcode for you.

Generate a barcode when adding a product

1. Open the product form (New or Edit).
2. Click the **Generate** button next to the **Barcode** box. A unique 13-digit barcode appears.
3. Click **Save**.

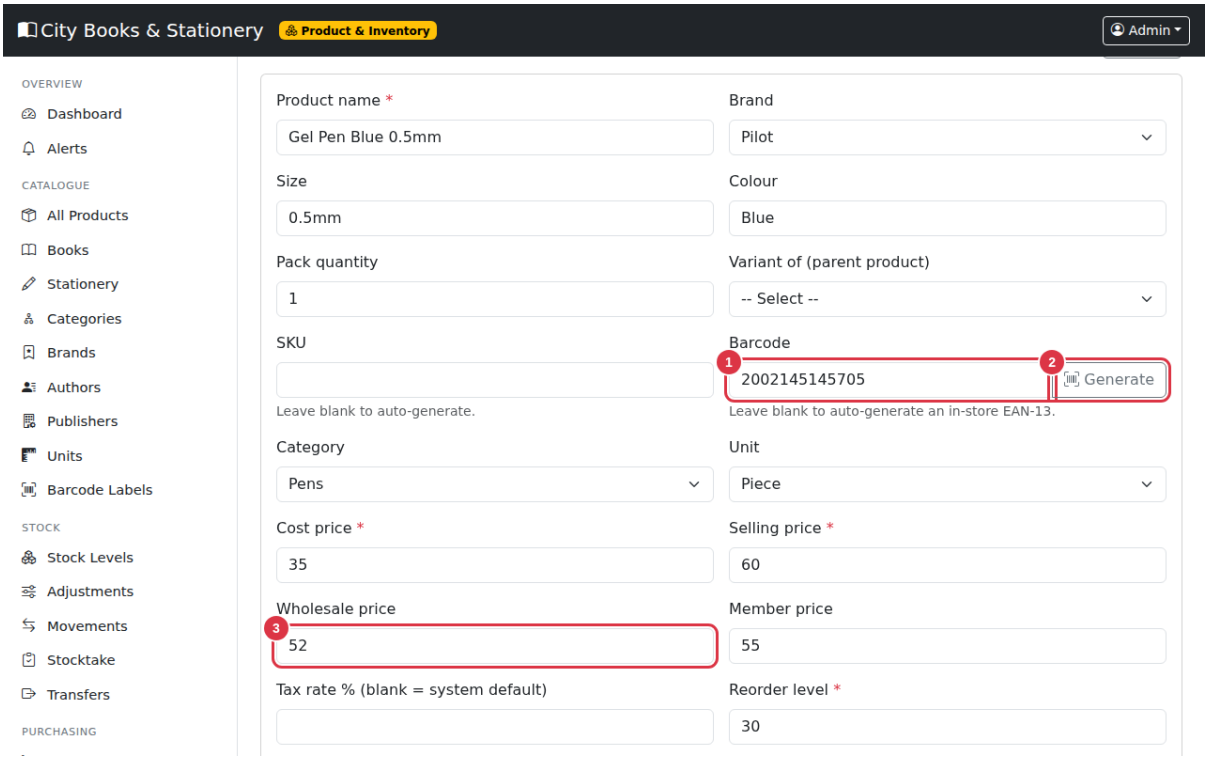

Figure 67. *Generating a barcode. 1 = Barcode box, 2 = Generate button, 3 = Wholesale price.*

> **NOTE:** If you leave the Barcode box empty and click Save, the system generates a barcode automatically. For a book with an ISBN, the ISBN is used.

Generate barcodes for many products at once

1. Click **Barcode Labels** in the menu.
2. If some products have no barcode, a yellow button **Generate N missing barcode(s)** appears at the top. Click it and confirm.

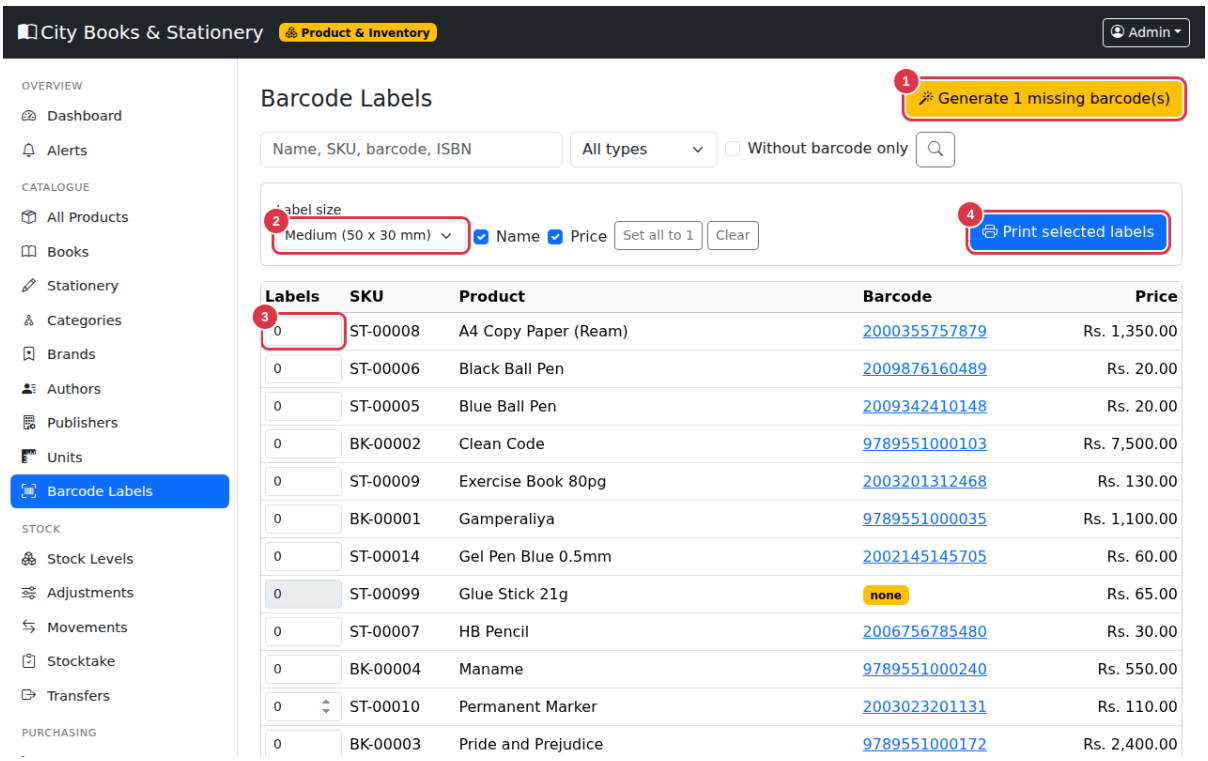

Figure 68. *The Barcode Labels page. 1 = Generate missing barcodes, 2 = Label size, 3 = Number of labels for a product, 4 = Print selected labels.*

Print barcode labels (stickers)

1. On **Barcode Labels**, search for the products you need.
2. In the **Labels** column type **how many stickers** you want for each product (0 = none).
3. Choose the **Label size** (small 38 x 25 mm, medium 50 x 30 mm, large 70 x 40 mm) and tick whether to print the **name** and **price**.
4. Click **Print selected labels**. A new page opens with the labels.
5. Click **Print**. In the print window choose your label printer or normal A4 paper, and untick "Headers and footers".

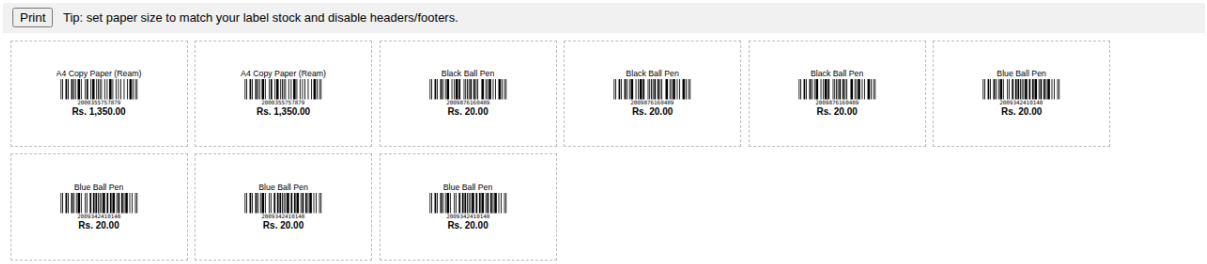

Figure 69. *The label sheet ready to print. Each label has the product name, the barcode and the price.*

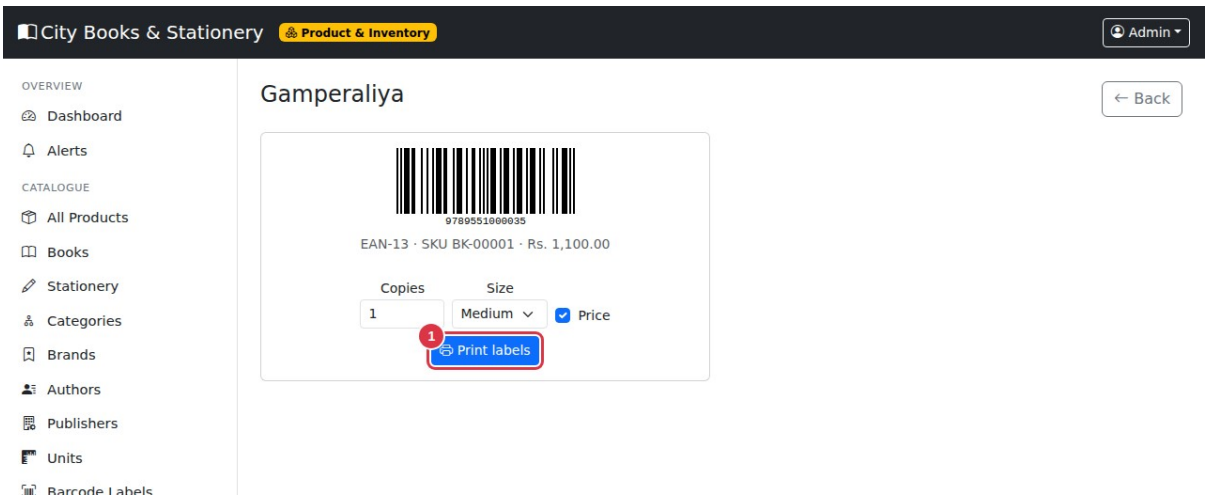

Figure 70. To print labels for one product, click its barcode icon. 1 = Print labels, 2 = Generate a new barcode.

IMPORTANT: **Generate new barcode** replaces the old code. Labels already stuck on products will no longer be recognised. Use it only for products that have no printed labels yet. Books keep their ISBN.

TIP: Test one label first and check that your scanner reads it before printing a whole roll.

5.4 Stock levels and adjustments

Viewing stock

Click **Stock Levels**. The list shows for each product: **On hand** (counted in the shop/store), **Reserved** (set aside), **Available** (on hand minus reserved), **Damaged**, **Reorder** level and stock value. Colours: green = healthy, yellow = low, red = out of stock.

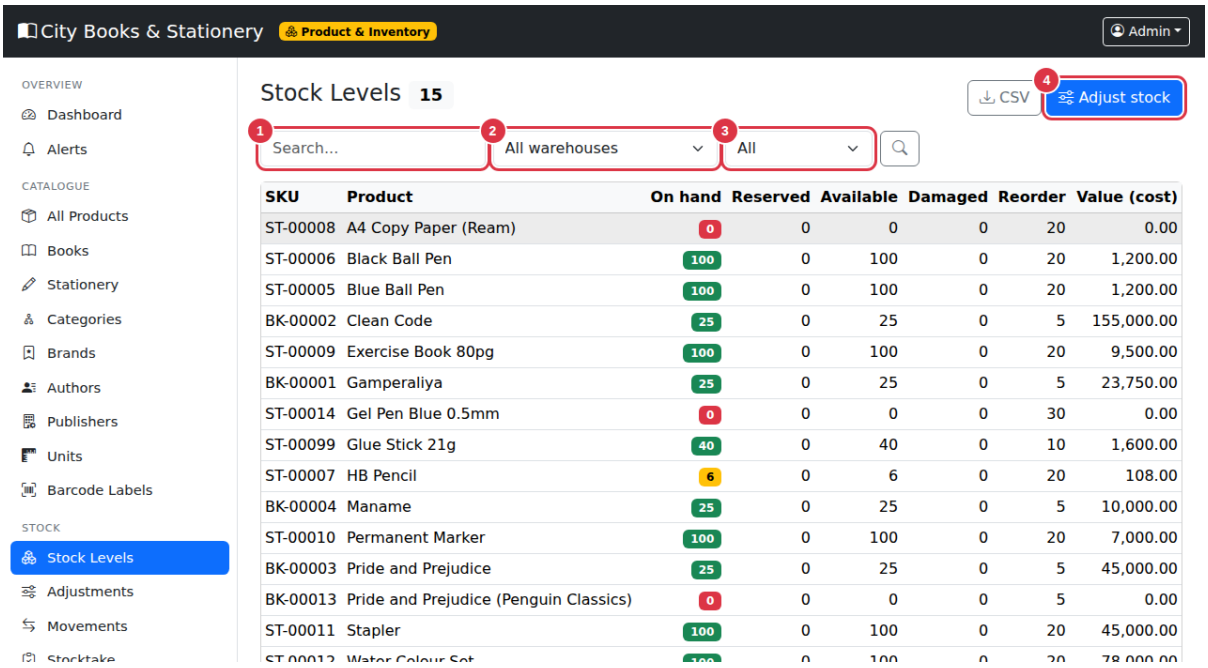

Figure 71. Stock levels. 1 = Search, 2 = Warehouse filter, 3 = Show only low / out / damaged, 4 = Adjust stock.

Use **Warehouse** to see one location only, and **CSV** to download the list for Excel.

Adjusting stock (corrections, damage, loss)

Stock changes by itself when you receive goods, sell, return or transfer. Use an **adjustment** only when something else happened - for example a book was damaged by water, or an item was lost.

1. Click **Stock Levels**, then **Adjust stock** (or **Adjustments** > **New**).
2. Choose the **Warehouse** and the **Product**.
3. Choose the **Adjustment type**: **Increase**, **Decrease**, **Record damaged**, **Record lost**, **Reserve stock** (set aside for a customer) or **Release reserved**.
4. Type the **Quantity** and a clear **Reason**.
5. Click **Submit**.

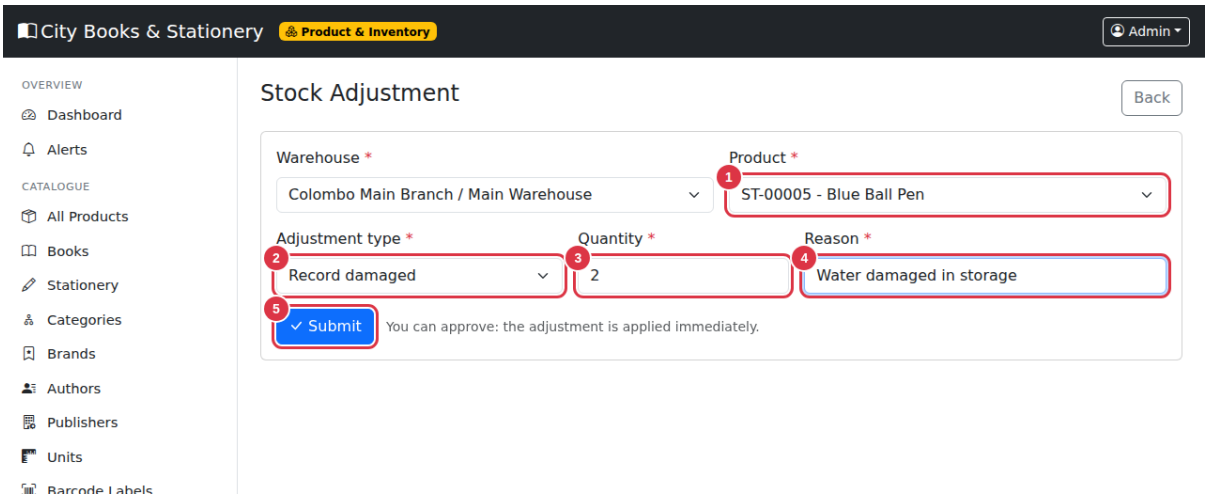

Figure 72. The adjustment form. 1 = Product, 2 = Type, 3 = Quantity, 4 = Reason, 5 = Submit.

If you are allowed to approve adjustments, the change is applied at once. Otherwise it is **Pending** until a manager approves it on the **Adjustments** page (green tick = approve, red cross = reject).

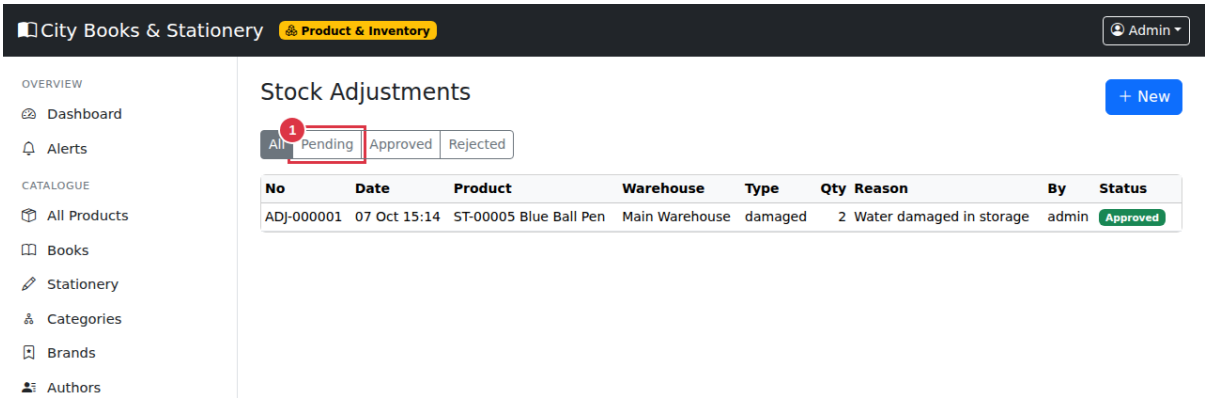

Figure 73. The adjustments list. 1 = Filter by status. Pending lines have approve / reject buttons for managers.

> **IMPORTANT:** Always type an honest reason. Every adjustment is recorded with your name and shown in the audit log.

Stock movements - the history of every change

Movements lists every increase and decrease (purchase, sale, return, damage, transfer, stocktake) with date, user and reference. Use it when you need to find out why a quantity changed.

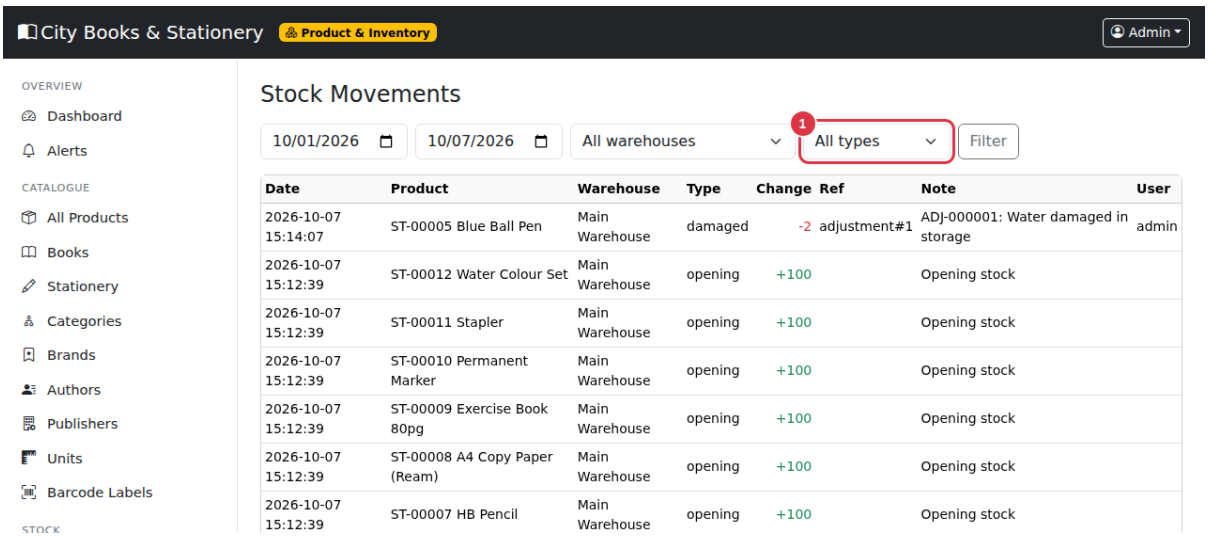

Figure 74. *The movement history. 1 = Filter by type.*

5.5 Buying from suppliers (purchasing)

Buying follows a clear path. Each step is recorded so you always know what was ordered, what arrived and what you owe:

Purchase Order (PO) > Approval > Goods Received (GRN) > Purchase Invoice > Supplier Payment

Step 1 - Create a purchase order

1. Click **Purchase Orders**, then **New PO**.
2. Choose the **Supplier** and the **warehouse** where the goods will be delivered. Set the order date (and an expected date if you want).
3. In the lines, choose a **Product**, type the **Qty** and the **Unit price** (it is filled from the cost price - change it if the supplier's price is different). Click **Add line** for more products.
4. Click **Save as draft**.

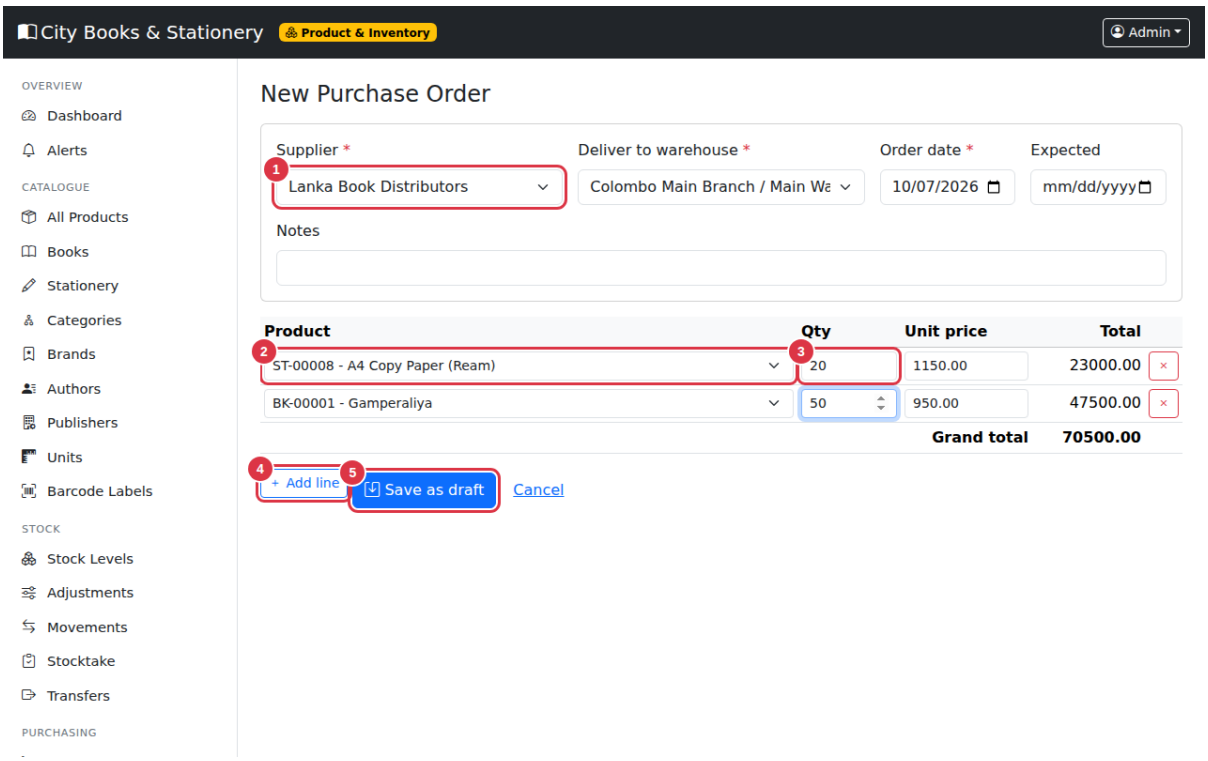

Figure 75. The purchase order form. 1 = Supplier, 2 = Product line, 3 = Quantity, 4 = Add line, 5 = Save as draft.

Step 2 - Submit and approve

1. Open the PO. You can still **Edit** it while it is a draft.
2. Click **Submit** when it is ready.
3. A **different person** with the approval permission (the manager) opens the PO and clicks **Approve**. (Use **Cancel PO** if the order is not needed.)

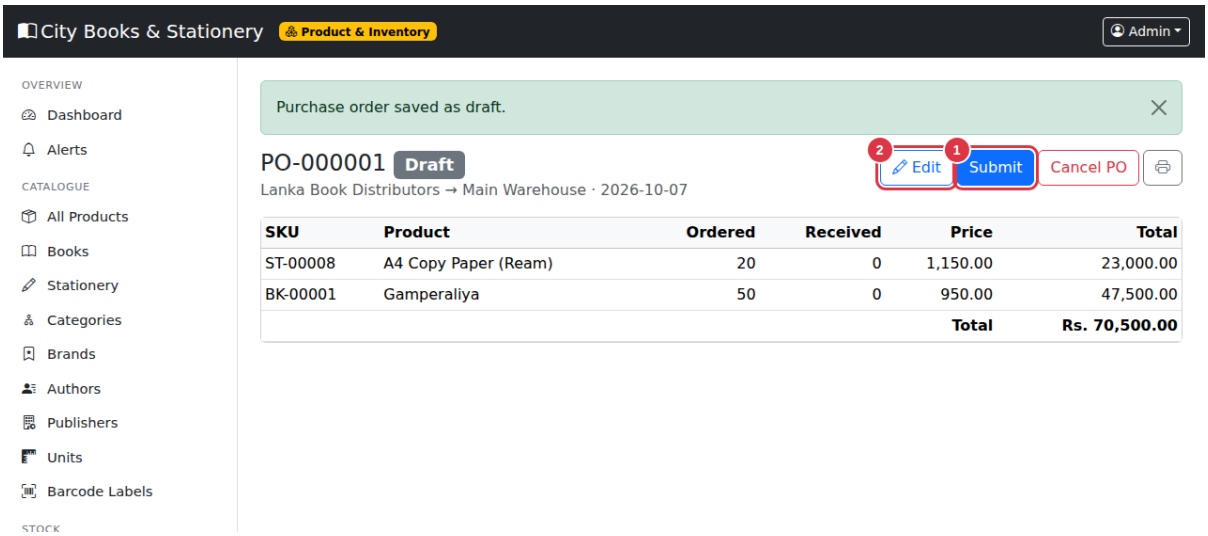

Figure 76. A draft PO. 1 = Submit, 2 = Edit.

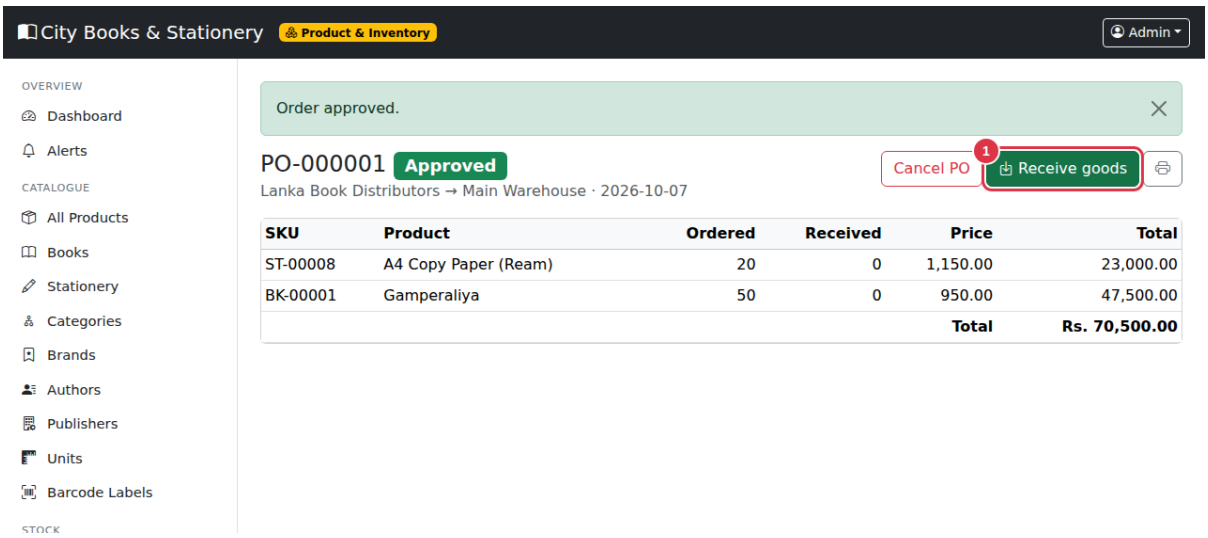

Figure 77. An approved PO is ready for receiving. 1 = Receive goods.

Step 3 - Receive the goods

When the delivery arrives, check the boxes against the delivery note.

1. Open the approved PO and click **Receive goods**.
2. For each item, type how many you **Received**. If some are **Damaged** or you **Reject** some, type those numbers too.
3. Click **Confirm receipt & update stock**.

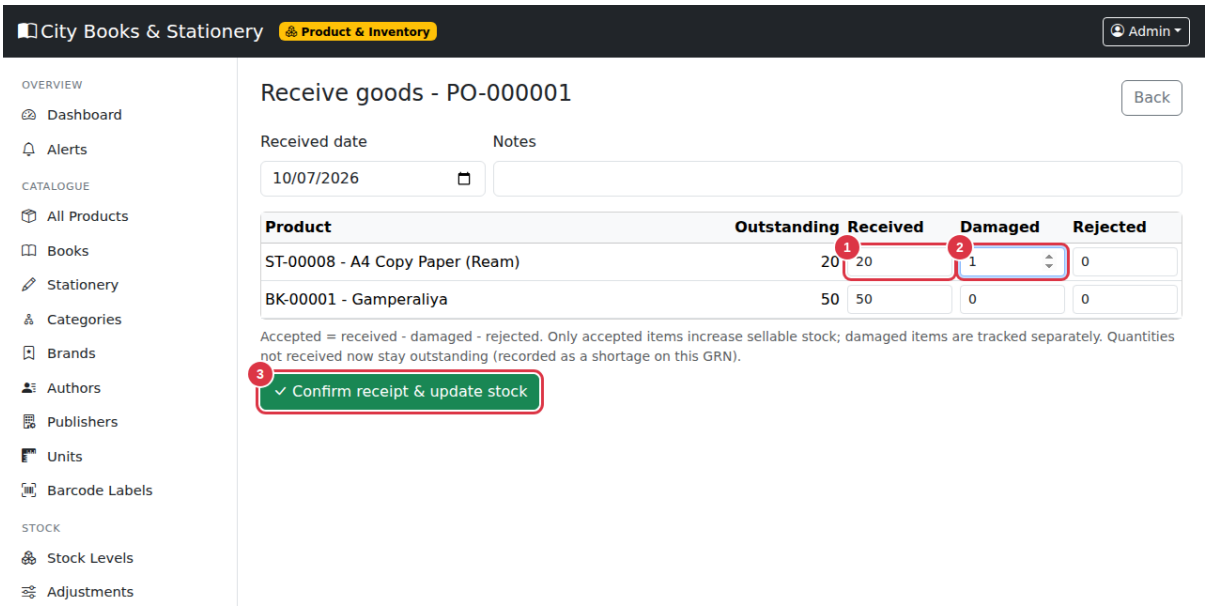

Figure 78. Receiving goods. 1 = Quantity received, 2 = Damaged quantity, 3 = Confirm receipt.

- Only the **accepted** quantity (received - damaged - rejected) is added to your stock. Damaged items are tracked separately.
- If less arrives than ordered, the PO stays **Partial** and you can receive the rest later. The shortage is recorded on the GRN.
- The item's **cost price** is updated to the price on the PO when the delivery is accepted.

Step 4 - Create the purchase invoice

After receiving, record the supplier's bill. Open the **GRN** page (it opens automatically after receiving). Type the supplier's **invoice number**, the invoice and due dates, then click **Create invoice**. (You need the invoice permission - usually accountants.) The invoice total is the accepted quantity x price, and it is added to what you owe the supplier.

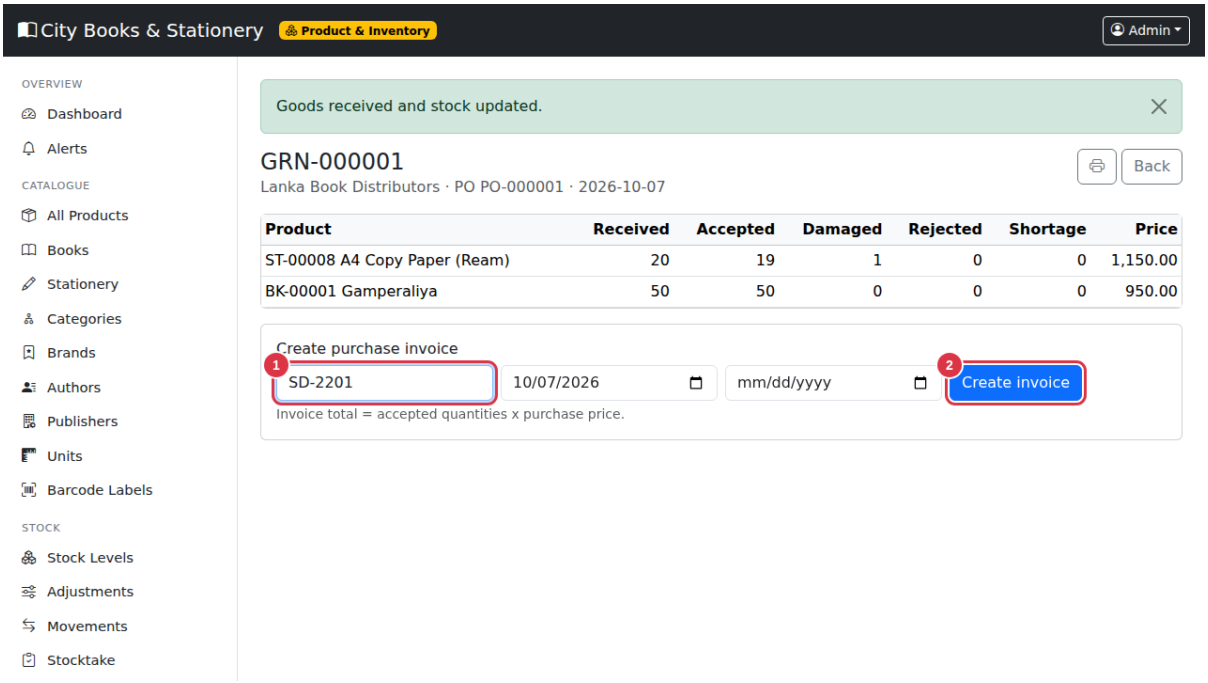

Figure 79. The goods received note. 1 = Supplier invoice number, 2 = Create invoice.

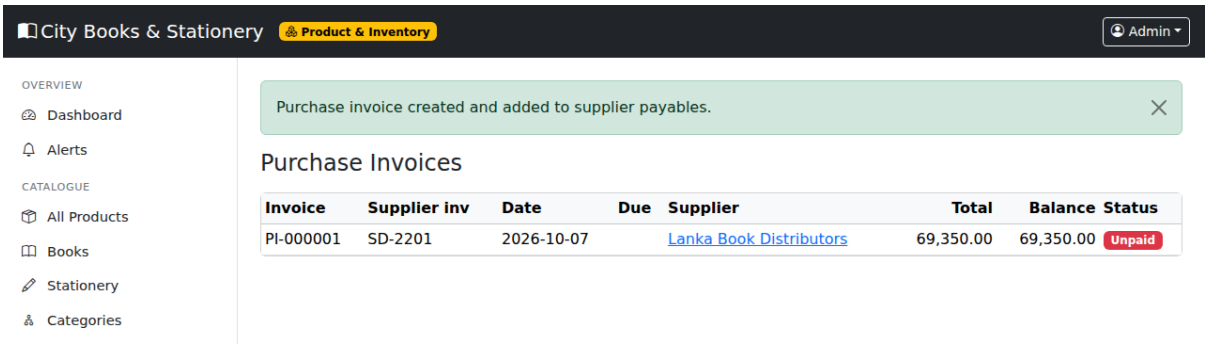

Figure 80. Purchase invoices with their balance and status (Unpaid / Partial / Paid).

Step 5 - Pay the supplier

Go to **Administration > Suppliers > (eye) profile** and record the payment (see Section 3.6). The invoice status changes to Partial or Paid.

Returning goods to a supplier

1. Click **Purchase Returns**, then **New return**.
2. Choose the **Supplier**, the **warehouse**, type the **reason**, and add the products, quantities and prices.
3. Click **Submit return**. A manager clicks the green tick to **approve** it.

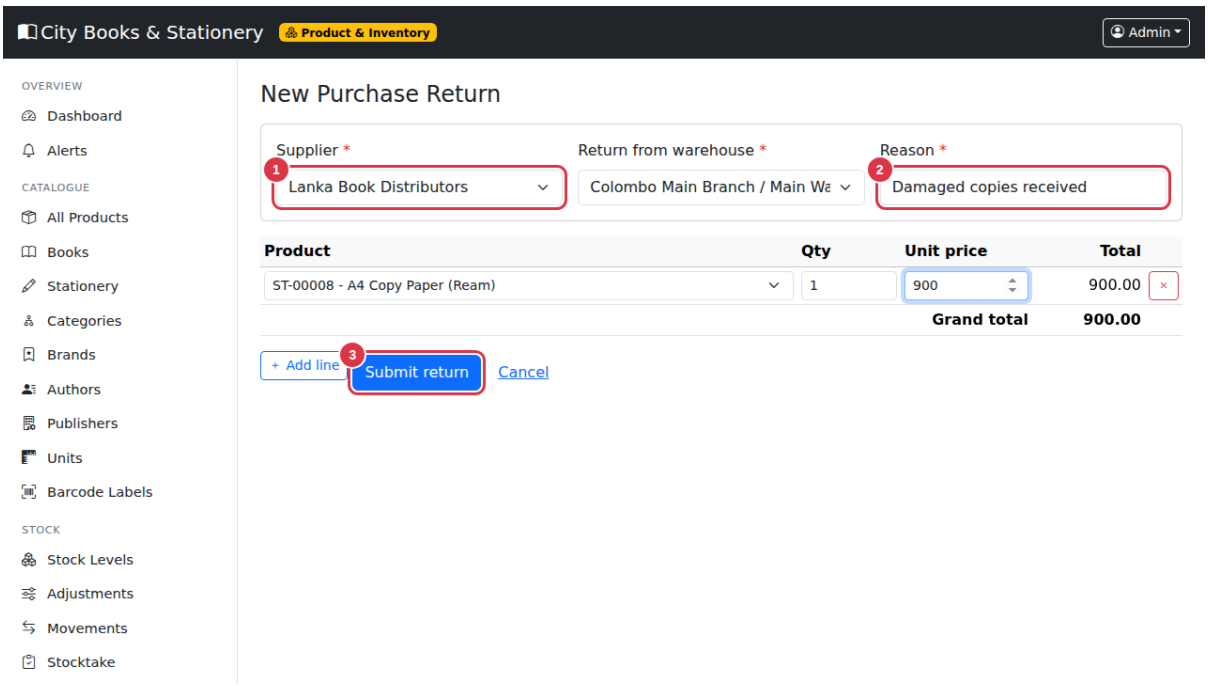

Figure 81. *A purchase return form. 1 = Supplier, 2 = Reason, 3 = Submit return.*

When approved, the stock goes down and the value is **credited** to the supplier (it reduces what you owe).

5.6 Transferring stock between locations

Use a transfer to move stock from one warehouse or branch to another (for example from the main store to the Kalutara branch).

1. Click **Transfers**, then **New transfer**.
2. Choose **From (source)** and **To (destination)**, add the products and quantities (you cannot send more than is available), and click **Create transfer**.
3. A manager opens the transfer and clicks **Approve** (a different person).
4. When the goods leave, click **Dispatch**. The stock is taken out of the source warehouse and is now "on the way".
5. At the destination, the receiver checks the goods and clicks **Receive**. The stock is added to the destination warehouse.

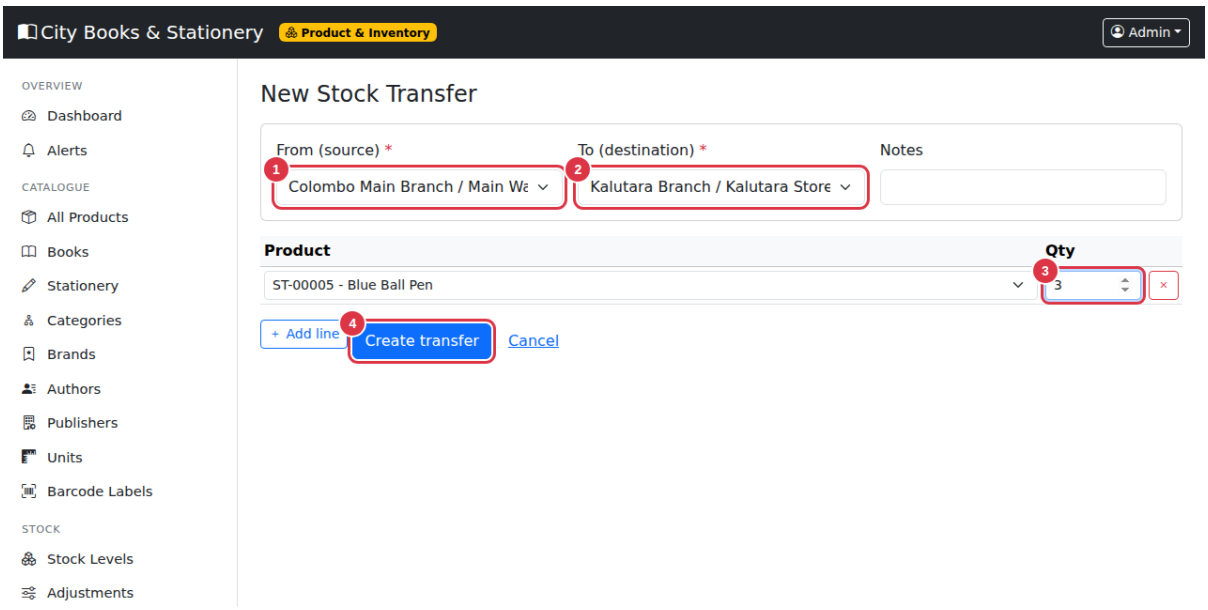

Figure 82. *The transfer form. 1 = From, 2 = To, 3 = Quantity, 4 = Create transfer.*

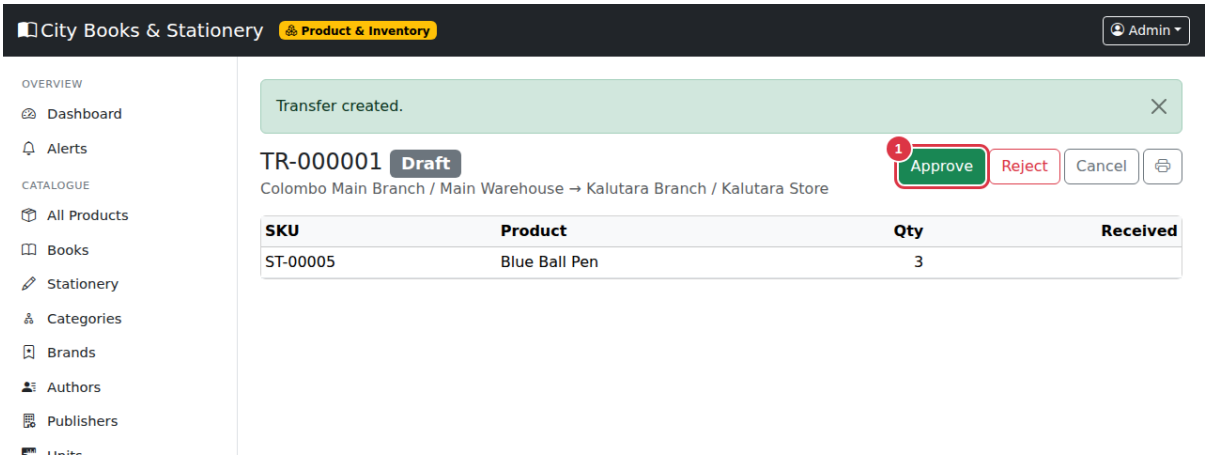

Figure 83. *A new transfer. 1 = Approve.*

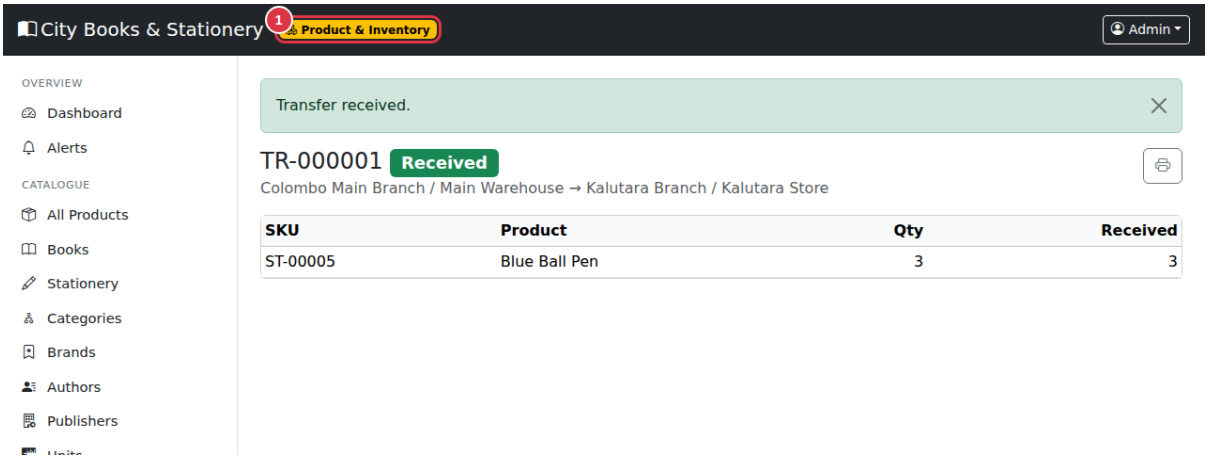

Figure 84. *A completed transfer shows the status Received.*

> **NOTE:** You can **Reject** a transfer before it is approved, or **Cancel** it before it is dispatched.

5.7 Stocktake - counting the stock

A stocktake compares what the system says you have with what is really on the shelves. Do it regularly (for example every month) for all or part of the shop.

1. Click **Stocktake**. Choose the **Warehouse** and (optional) one **Category** to count only that section. Click **Start stocktake**.
2. The system lists the products with the **System** quantity. Count the real items on the shelves and type each number in **Counted**.
3. Click **Save counts** (you can come back later) and, when every product is counted, click **Save & submit for approval**.
4. A manager opens the stocktake, checks the **Variance** column (counted minus system) and clicks **Approve & adjust stock**. The stock is corrected. (Click **Reopen counting** if some counts must be checked again.)
5. Click **Report** to print or download the result (PDF, CSV or Print).

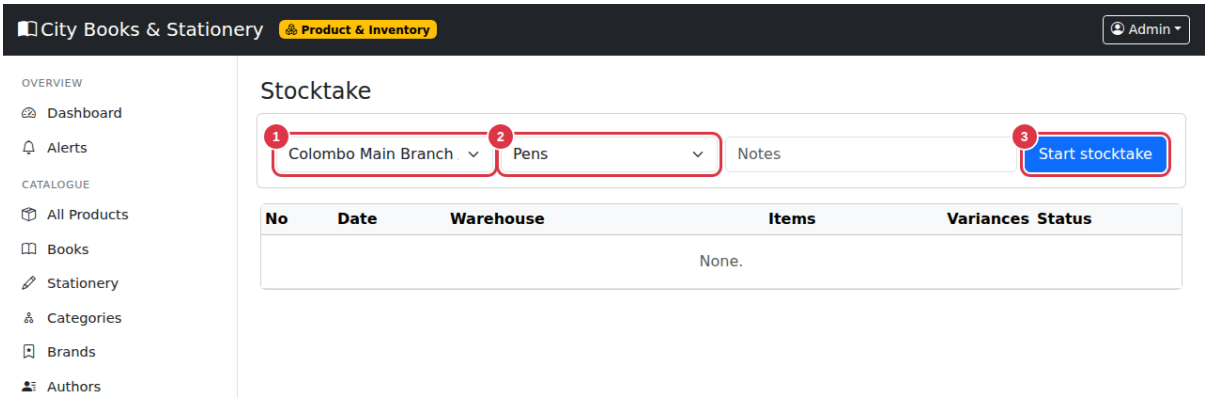

Figure 85. Starting a stocktake. 1 = Warehouse, 2 = Category, 3 = Start stocktake.

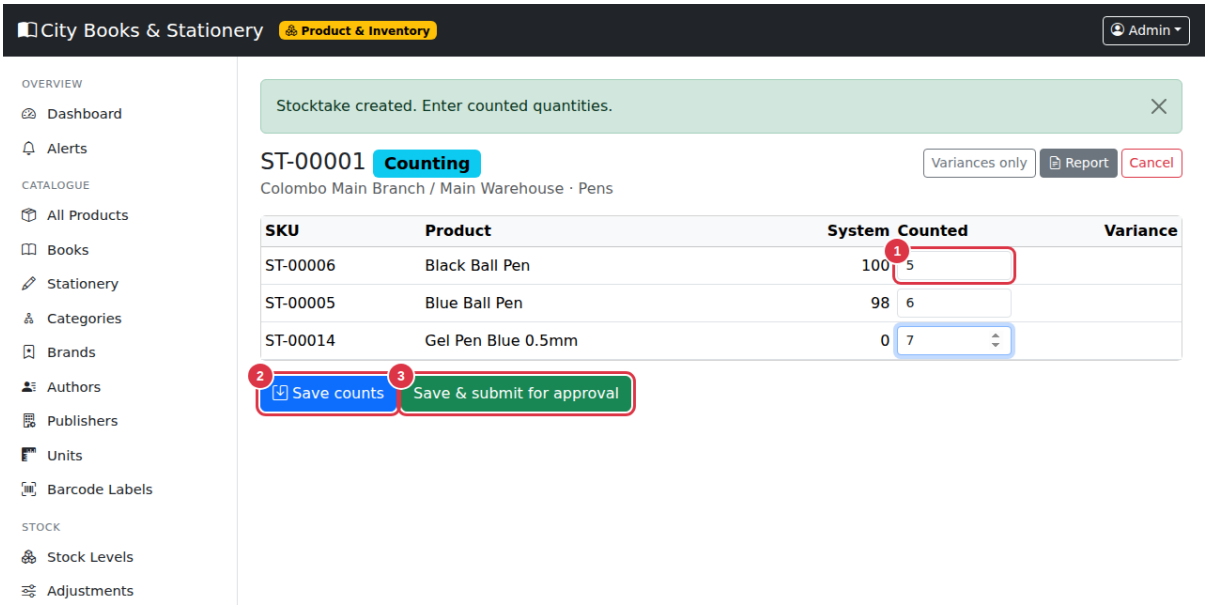

Figure 86. Entering counted quantities. 1 = Counted box, 2 = Save counts, 3 = Save & submit for approval.

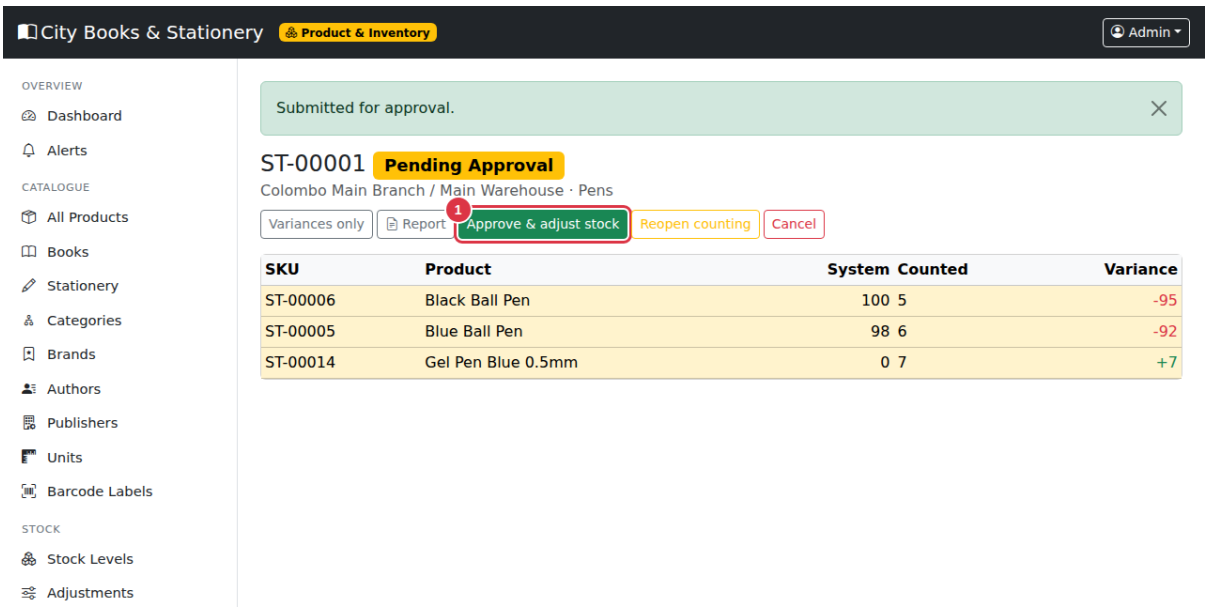

Figure 87. *Waiting for approval. 1 = Approve & adjust stock (manager).*

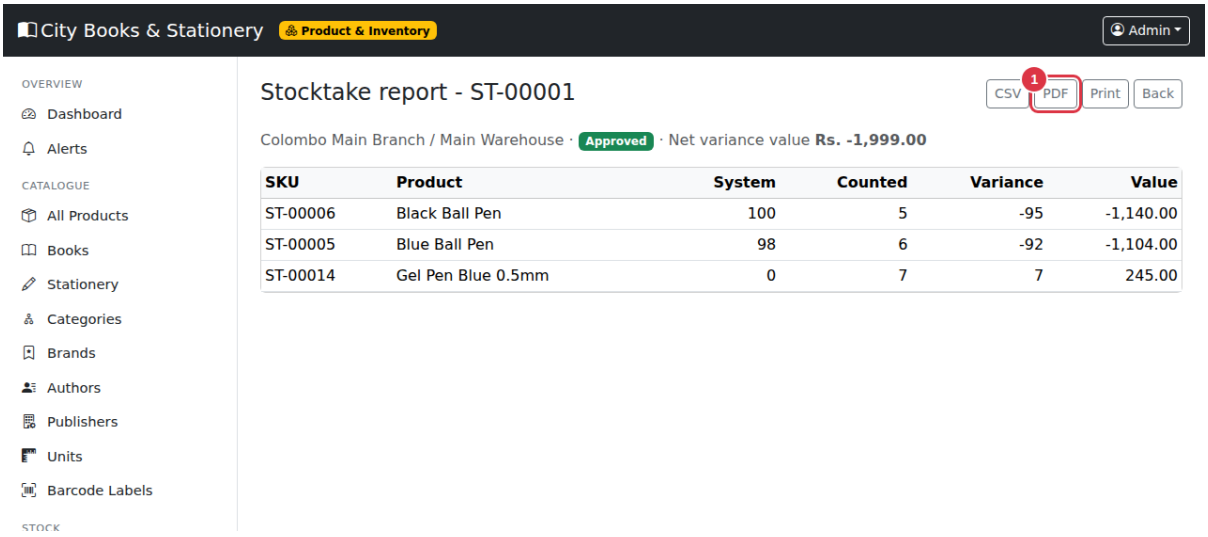

Figure 88. *The stocktake report with variances and their value. 1 = PDF.*

IMPORTANT: Only one open stocktake is allowed per warehouse. Try not to sell items from the area while you count them. Approving changes your stock numbers permanently.

TIP: Use **Variances only** on the counting page to see just the products where the count differs.

5.8 Inventory alerts - what to re-order

Alerts shows products that are **Out of stock**, **Low stock** (at or below the reorder level) and **Overstock** (above the maximum you set).

1. Click **Alerts** in the menu.
2. Tick the products you want to order and check the suggested **Order qty** (change it if needed).
3. Choose the **Replenish warehouse**. To create an order straight away, also choose a **supplier**.

4. Click **Create for selected**. Without a supplier, **purchase requests** are saved. With a supplier, a **draft purchase order** is created for you to check and submit.
5. When a request is finished, click **Mark resolved**.

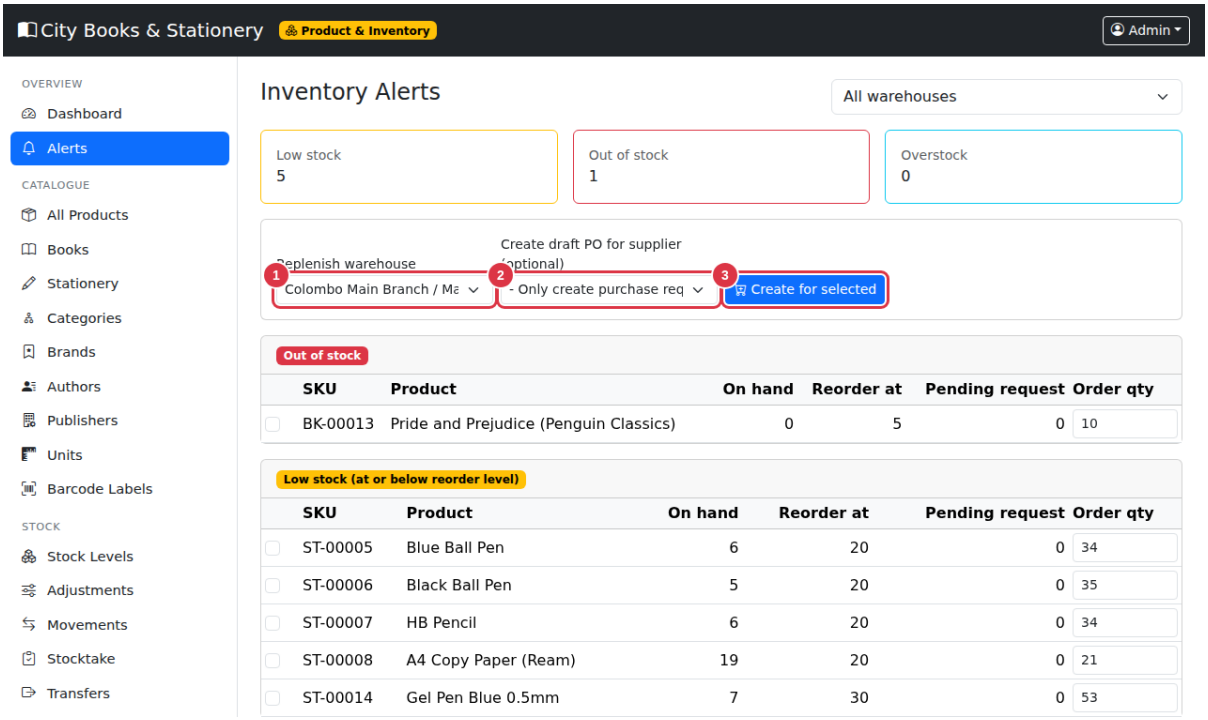

Figure 89. *The alerts page. 1 = Warehouse to replenish, 2 = Supplier for a draft PO, 3 = Create for selected.*

6. Daily, weekly and monthly routines

6.1 Cashier checklist

When	What to do
Start of day	Sign in > Point of Sale > **Register / Session** > choose counter > count and type the opening cash > **Start shift**.
During the day	Scan items > choose customer if needed > **Pay** > print receipt. Use **Hold** when serving two customers. Ask a manager to approve big discounts and returns.
End of day	Resume or discard held carts > count the cash > **Register / Session** > type counted cash > **Close register** > sign out.

6.2 Store keeper checklist

When	What to do
Every day	Receive deliveries against approved purchase orders (**Receive goods**). Check **Alerts** and create purchase requests.
When stock is damaged or lost	Record a stock **adjustment** with a clear reason.
Every week	Print barcode labels for new items. Check **Pending adjustments** and **Transfers**.
Every month	Do a **stocktake** of one section or the whole shop.

6.3 Manager checklist

When	What to do
Every day	Approve pending **purchase orders**, **stock adjustments**, **transfers** and **expenses**. Review the **dashboard**. Check **Cash Drawer** and reconcile closed shifts.
Every week	Review **Sales by day / product**, **Low stock** and **Customer outstanding** reports. Follow up unpaid customer balances.
Every month	Check **Profit & loss**, **Supplier outstanding**, and **Price change log**. Review user accounts: deactivate people who left. Take a **backup** (ask your technical helper).

7. Questions and problems (FAQ)

Problem	What to do
I forgot my password.	Ask a manager or administrator to **reset** it (Section 3.2). You will choose a new one at your next sign-in.
My account is locked.	It unlocks by itself after 15 minutes, or an administrator can unlock it with the padlock button in Users.
I do not see the tile / menu / button I need.	You do not have that permission. Ask your manager to check your role (Section 2).
The system signed me out.	You were inactive for 30 minutes. Sign in again. Unsaved forms are lost, so save often.
I see "Security token expired".	Go back, refresh the page (press F5) and try again.
The POS says "No open register session".	Open the register first: **Register / Session** > **Start shift**. If it says your counter is in use, ask who has it open, or choose another counter.
I scanned a barcode but nothing was added.	Click inside the search box first. Check the product exists and has that barcode. Try typing the code and pressing Enter.
"Insufficient stock" when selling.	The stock shown in the system is lower than the quantity you are selling. Check the item; the store keeper may need to receive goods or correct the stock.
The Pay button is grey.	The cart has a problem (a red or amber message under the items), or a discount needs manager approval.
A customer wants to pay later but the system refuses.	The customer needs to be chosen, must have a credit limit, and must not exceed it. Ask a manager.
I charged the wrong item.	A user with the Void permission can void the sale (Section 4.9) and you can sell again. Or process a return.
The receipt did not print.	Check the printer is on and set as the default printer. Open the sale in **Transactions** and click **Receipt** to print again.
The ISBN is rejected.	The number is not a valid ISBN. Check the digits on the book. It must be 10 or 13 digits.
"That value already exists".	Another product / customer already uses the same code, ISBN, barcode or username. Search for it first.
I cannot delete a record.	It is already used in sales or purchases. Use the toggle to **deactivate** it instead.
A report shows no data.	Check the dates at the top of the report and click **Apply**.
The cash drawer shows a variance.	The counted cash is different from the expected cash. Recount, then tell the manager. The manager reviews it in **Cash Drawer**.

IMPORTANT: If you see a screen that says "Something went wrong", write down what you were doing and tell your administrator. The system keeps a technical error log for them.

8. Good habits and security

- Use **your own login** only. Never use another person's account.
- Choose a strong password and change it if you think someone knows it.
- **Sign out** or lock the computer when you leave the counter.
- Do not give manager passwords to cashiers. Managers type their own password when approving.
- Count the cash drawer honestly. Differences are recorded.
- Type clear **reasons** for voids, returns, discounts and stock adjustments - they are recorded for review.
- Check customer and product details before you save.
- Keep backups of the database (ask your technical helper to schedule them) and keep the computer and printer in a safe place.

9. Glossary

Term	Meaning
Audit log	A permanent diary of important actions in the system.
Available stock	On-hand stock minus reserved stock - what can be sold.
Barcode	The black stripes and numbers a scanner reads. Books use their ISBN; other items can have an in-store barcode.
Branch	One shop location of your business.
Cart	The list of items being sold in the POS before payment.
Cost price	What you pay the supplier for an item.
Counter / Register	A cash desk with a computer and cash drawer.
Credit sale	A sale where the customer pays later.
Exchange credit note	A number given when an item is returned for exchange; it can be used as payment on a new sale.
GRN (Goods Received Note)	The record of goods that arrived from a supplier.
ISBN	The international number that identifies a book.
Loyalty points	Points a customer earns on purchases.
On hand	The number of items in stock.
PO (Purchase Order)	An order sent to a supplier.
Reorder level	The stock level at which you should order more.
Reserved stock	Stock set aside for a customer; not available for sale.
Session / Shift	The period between opening and closing a register.
SKU	Stock keeping unit - the shop's own code for a product.
Stocktake	Counting the real stock and comparing it with the system.
Variance	The difference between what was expected and what was counted.
Void	To cancel a completed sale; stock and payments are reversed.
Warehouse	A place where stock is kept (shop floor, back store...).

Getting help

For problems you cannot solve with this guide, contact your shop administrator. Please tell them: (1) your username, (2) the page you were on, (3) what you clicked, and (4) the exact message you saw. A screenshot helps a lot (press the **Print Screen** key, or use the Snipping Tool in Windows).
